**N150 Wireless ADSL2+ Modem Router**

**DGN1000**

**Package Contents:**
- **Power Adapter**
- **Telephone Cable**
- **Ethernet Cable**
- **Modem Router**
- **Resource CD**

**4-Step Cable Connection:**

1. **Connect the telephone cable** from the wall jack to the telephone port of the modem router.
2. **Connect the Ethernet cable** from the Ethernet port of the modem router to an Ethernet port on your laptop or desktop computer.
3. **Connect the power adapter** to the power port of the modem router, and plug it into an electrical outlet.
4. **Turn on the modem router**.

**Tip:** Use an ADSL microfilter on every phone line in the house. If your modem router and telephone connect to the same phone line, use an ADSL microfilter/splitter like the one shown here.

**Note:** If your laptop does not have a CD drive, see “Manual Installation (PC with No CD Drive)” on the back to complete your router setup.
Manual Installation (Linux, Mac, or PC with No CD Drive)

1. Follow Steps 1 - 3 to connect the DGN1000 modem router to your computer.
2. Check that the power LED is green, and if not, power on the modem router and wait for the power LED light to turn green.

Set up Internet Connectivity

1. Type http://www.routerlogin.net in the web browser address bar. Press Enter.
2. Type admin for the user name and password for the password. Click OK.
3. Select Setup Wizard in the top-left corner and make sure Yes is selected under Auto-Detect Connection Type. Click Next to complete the Setup Wizard.
4. Select Basic Settings to see your settings.

Set up Internet Connectivity

1. Type http://www.routerlogin.net in the web browser address bar. Press Enter.
2. Type admin for the user name and password for the password. Click OK.
3. Select Setup Wizard in the top-left corner and make sure Yes is selected under Auto-Detect Connection Type. Click Next to complete the Setup Wizard.
4. Select Basic Settings to see your settings.

Note: If your Internet Service Provider (ISP) requires you to log in, enter your ISP login information when prompted. The ISP login is not the same as the router login.

If you do not have your ISP login information, contact your ISP and record it here:

ISP user name: __________________________
ISP password: __________________________

Preset Wireless Security

This product has a preset unique WiFi Network Name (SSID) and WPA/WPA2-PSK passphrase that are located on the label on the bottom of the product. The default SSID and passphrase are uniquely generated for every device to protect and maximize your wireless security.

NETGEAR recommends that you do not change the WiFi Network Name (SSID) and WPA/WPA2-PSK passphrase. If you change these settings during the installation process, the information on the bottom of the product does not apply.

Basic Settings

Select Country:

- USA

Select the WiFi Network Name (SSID) and WPA/WPA2-PSK passphrase located on the product label on the bottom of the router.

If you changed the default wireless settings, record them here:

Wireless Network Name (SSID) __________________________
Wireless Security Passphrase __________________________

To retrieve your passphrase, type http://www.routerlogin.net and log in with the user name admin and your password (default is password). Select Wireless Settings to retrieve your passphrase.

Do not stack equipment, or place equipment in tight spaces, in drawers, or on carpets. Make sure your equipment is surrounded by at least 2 inches of air space.

Precautions

- Do not stack equipment, or place equipment in tight spaces, in drawers, or on carpets. Make sure your equipment is surrounded by at least 2 inches of air space.

Connect Wireless Devices to Your Router

Choose either the manual or WiFi Protected Setup (WPS) method to add wireless devices and other equipment to your wireless network.

Manual Method

1. Open the software tool that manages your wireless connections on the device (laptop computer, gaming device, iPhone) that you want to connect to your router. This tool scans for all wireless networks in your area.
2. Look for your network and select it. If you did not change the name of your network during the setup process, look for the default WiFi Network Name (SSID) and select it. The default WiFi Network Name (SSID) is located on the product label on the bottom of the router.
3. Enter the passphrase and click Connect. The default passphrase is located on the product label on the bottom of the router.
4. Repeat steps 1 - 3 to add other wireless devices.

WPS Method

If your wireless device supports WPS (Push ‘N’ Connect), follow these steps:

1. Press the WPS button on the router. It looks similar to .
2. Within 2 minutes, press the WPS button on your wireless device, or follow the WPS instructions that came with your wireless device. The device is now connected to your router.
3. Repeat steps 1 - 2 to add other WPS wireless devices.

Note: WPS does not support WEP security. If you try to connect a WEP client to your network using WPS, it will not work.
