Support
Thank you for selecting NETGEAR products.
After installing your device, locate the serial number on the label of your product and use it to register your product at https://my.netgear.com. You must register your product before you can use NETGEAR telephone support. NETGEAR recommends registering your product through the NETGEAR website. For product updates and web support, visit http://support.netgear.com.
Phone (US & Canada only): 1–888–NETGEAR.
Phone (Other Countries): Check the list of phone numbers at http://support.netgear.com/general/contact/default.aspx.
Contact your Internet service provider for technical support.

Compliance
For regulatory compliance information, visit http://www.netgear.com/about/regulatory.
See the regulatory compliance document before connecting the power supply.

Chapter 3  LAGs

LAG Concepts ...................................................... 52
Create Two LAGs ................................................ 53
  CLI: Create Two LAGs ........................................ 53
  Web Interface: Create Two LAGs .......................... 53
Add Ports to LAGs ............................................... 54
  CLI: Add Ports to the LAGs .................................. 54
  Web Interface: Add Ports to LAGs .......................... 54
Enable Both LAGs ................................................. 56
  CLI: Enable Both LAGs ...................................... 56
  Web Interface: Enable Both LAGs .......................... 56

Chapter 4  Port Routing

Port Routing Concepts .......................................... 58
Port Routing Configuration .................................... 58
Enable Routing for the Switch ................................. 59
  CLI: Enable Routing for the Switch ....................... 59
  Web Interface: Enable Routing for the Switch .......... 60
Enable Routing for Ports on the Switch ..................... 60
  CLI: Enable Routing for Ports on the Switch .......... 60
  Web Interface: Enable Routing for Ports on the Switch 61
Add a Default Route ............................................ 62
  CLI: Add a Default Route .................................. 63
  Web Interface: Add a Default Route ..................... 63
Add a Static Route .............................................. 64
  CLI: Add a Static Route .................................... 64
  Web Interface: Add a Static Route ....................... 64

Chapter 5  VLAN Routing

VLAN Routing Concepts ......................................... 67
Create Two VLANs ............................................... 67
  CLI: Create Two VLANs ..................................... 68
  Web Interface: Create Two VLANs ........................ 69
Set Up VLAN Routing for the VLANs and the Switch ....... 72
  CLI: Set Up VLAN Routing for the VLANs and the Switch 72
  Web Interface: Set Up VLAN Routing for the VLANs and the Switch 73
Chapter 6  Proxy ARP

Proxy ARP Concepts ................................................................. 75
Proxy ARP Examples ................................................................. 75
CLI: show ip interface .............................................................. 75
CLI: ip proxy-arp ................................................................. 75
Web Interface: Configure Proxy ARP on a Port ......................... 76

Chapter 7  ACLs

ACL Concepts ................................................................. 78
MAC ACLs ................................................................. 78
IP ACLs ................................................................. 79
ACL Configuration ................................................................. 79
Set Up an IP ACL with Two Rules .................................................. 79
CLI: Set Up an IP ACL with Two Rules ........................................... 80
Web Interface: Set Up an IP ACL with Two Rules ......................... 81
One-Way Access Using a TCP Flag in an ACL ................................. 84
CLI: Configure One-Way Access Using a TCP Flag in an ACL ...................... 84
Web Interface: Configure One-Way Access Using a TCP Flag in an ACL .... 88
Use ACLs to Configure Isolated VLANs on a Layer 3 Switch .................. 100
CLI: Configure One-Way Access Using a TCP Flag in ACL Commands .. 101
Web Interface: Configure One-Way Access Using a TCP Flag in an ACL .... 103
Set up a MAC ACL with Two Rules .............................................. 112
CLI: Set up a MAC ACL with Two Rules ............................................. 112
Web Interface: Set up a MAC ACL with Two Rules .......................... 112
ACL Mirroring ................................................................. 115
CLI: Configure ACL Mirroring ........................................................... 115
Web Interface: Configure ACL Mirroring ............................................ 117
ACL Direction ................................................................. 120
CLI: Redirect a Traffic Stream ........................................................ 120
Web Interface: Redirect a Traffic Stream ........................................... 122
Configure IPv6 ACLs .......................................................... 125
CLI: Configure an IPv6 ACL .......................................................... 125
Web Interface: Configure an IPv6 ACL ............................................. 126

Chapter 8  CoS Queuing

QoS Queuing Concepts ............................................................ 133
CoS Queue Mapping .......................................................... 133
CoS Queue Configuration .......................................................... 134
Show classofservice Trust .......................................................... 135
CLI: Show classofservice Trust .......................................................... 135
Web Interface: Show classofservice Trust ........................................... 135
Set classofservice Trust Mode .................................................. 135
CLI: Set classofservice Trust Mode .................................................. 135
Web Interface: Set classofservice Trust Mode ..................................... 136
Show classofservice IP-Precedence Mapping ...................................... 136
CLI: Show classofservice IP-Precedence Mapping ................................ 136
Web Interface: Show classofservice ip-precedence Mapping............. 136
Configure CoS-queue Min-bandwidth and Strict Priority Scheduler Mode.. 137
CLI: Configure CoS-queue Min-bandwidth and Strict Priority Scheduler Mode. 137
Web Interface: Configure CoS-queue Min-bandwidth and Strict Priority Scheduler Mode. 138
Set CoS Trust Mode for an Interface ........................................ 139
CLI: Set CoS Trust Mode for an Interface .................................. 139
Web Interface: Set CoS Trust Mode for an Interface .................... 140
Configure Traffic Shaping ...................................................... 140
CLI: Configure traffic-shape .................................................. 141
Web Interface: Configure Traffic Shaping .................................. 141

Chapter 9  DiffServ

DiffServ Concepts............................................................... 143
Configure DiffServ ........................................................... 144
CLI: Configure DiffServ ..................................................... 144
Web Interface: Configure DiffServ ....................................... 146
DiffServ for VoIP ............................................................... 159
CLI: Configure DiffServ for VoIP ....................................... 160
Web Interface: DiffServ for VoIP ....................................... 161
Auto VoIP ................................................................. 167
CLI: Configure Auto VoIP ................................................ 167
Web Interface: Configure Auto-VoIP .................................... 169
DiffServ for IPv6 ............................................................... 170
CLI: Configure DiffServ for IPv6 ....................................... 170
Web Interface: Configure DiffServ for IPv6 ............................ 172
Color Conform Policy ......................................................... 177
CLI: Configure a Color Conform Policy .................................. 178
Web Interface: Configure a Color Conform Policy .................... 179

Chapter 10  IGMP Snooping and Querier

Internet Group Management Protocol Concepts ......................... 187
IGMP Snooping ............................................................... 187
CLI: Enable IGMP Snooping ............................................. 187
Web Interface: Enable IGMP Snooping ................................ 187
Show igmpsnooping .......................................................... 188
CLI: Show igmpsnooping .................................................. 188
Web Interface: Show igmpsnooping .................................... 188
Show mac-address-table igmpsnooping ................................ 189
CLI: Show mac-address-table igmpsnooping .......................... 189
Web Interface: Show mac-address-table igmpsnooping .............. 189
External Multicast Router ..................................................... 190
CLI: Configure the Switch with an External Multicast Router ....... 190
Web Interface: Configure the Switch with an External Multicast Router ... 190
Multicast Router Using VLAN .............................................. 191
CLI: Configure the Switch with a Multicast Router Using VLAN .... 191
Web Interface: Configure the Switch with a Multicast Router Using VLAN191
IGMP Querier ................................................................. 192
Enable IGMP Querier ....................................................... 193
CLI: Enable IGMP Querier ............................................... 193
Web Interface: Enable IGMP Querier ................................. 193
Show IGMP Querier Status ............................................. 195
CLI: Show IGMP Querier Status ....................................... 195
Web Interface: Show IGMP Querier Status ........................... 195

Chapter 11  MVR

MVR Concepts ................................................................. 198
Configure MVR in Compatible Mode .................................. 199
CLI: Configure MVR in Compatible Mode ......................... 200
Web Interface: Configure MVR in Compatible Mode .......... 202
Configure MVR in Dynamic Mode .................................... 205
CLI: Configure MVR in Dynamic Mode ........................... 205
Web Interface: Configure MVR in Dynamic Mode ............ 207

Chapter 12  Security Management

Port Security ................................................................. 212
Set the Dynamic and Static Limit on Port 1/0/1 .................. 213
CLI: Set the Dynamic and Static Limit on Port 1/0/1 ......... 213
Web Interface: Set the Dynamic and Static Limit on Port 1/0/1 .... 213
Convert the Dynamic Address Learned from 1/0/1 to a Static Address ... 214
CLI: Convert the Dynamic Address Learned from 1/0/1 to the Static Address .................................................. 214
Web Interface: Convert the Dynamic Address Learned from 1/0/1 to the Static Address .................................................. 214
Create a Static Address ................................................... 215
CLI: Create a Static Address ............................................ 215
Web Interface: Create a Static Address ........................... 216
Protected Ports ............................................................... 216
CLI: Configure a Protected Port to Isolate Ports on the Switch ................................................................. 217

Configure a DHCP L3 Switch ............................................. 340

Chapter 22  MLD Snooping

Multicast Listener Discovery Concepts .............................. 346
MLD Snooping Concepts .................................................. 346
CLI: Configure MLD Snooping ......................................... 347
Web Interface: Configure MLD Snooping .......................... 347

Index
Before installation, read the Release Notes for this switch product. The Release Notes detail the platform-specific functionality of the switching, routing, SNMP, configuration, management, and other packages. In addition, see the following publications:

- The NETGEAR installation guide for your switch
- *Managed Switch Hardware Installation Guide*
- *Managed Switch Software Setup Manual*
- *ProSAFE Managed Switch Command Line Interface (CLI) User Manual*
- *ProSAFE M4100 Managed Switch Web Management User Manual*
VLANs

Virtual LANs

This chapter includes the following sections:

- VLAN Concepts
- Create Two VLANs
- Assign Ports to VLAN2
- Create Three VLANs
- Assign Ports to VLAN3
- Assign VLAN3 as the Default VLAN for Port 1/0/2
- Create a MAC-Based VLAN
- Create a Protocol-Based VLAN
- Virtual VLANs: Create an IP Subnet–Based VLAN
- Voice VLANs
- Private VLANs
- Assign Private-VLAN Types (Primary, Isolated, Community)
- Configure Private-VLAN Association
- Configure Private-VLAN Port Mode (Promiscuous, Host)
- Configure Private-VLAN Host Ports
- Map Private-VLAN Promiscuous Port
VLAN Concepts

Adding virtual LAN (VLAN) support to a Layer 2 switch offers some of the benefits of both bridging and routing. Like a bridge, a VLAN switch forwards traffic based on the Layer 2 header, which is fast. Like a router, it partitions the network into logical segments, which provides better administration, security, and management of multicast traffic.

A VLAN is a set of end stations and the switch ports that connect them. You can have different reasons for the logical division, such as department or project membership. The only physical requirement is that the end station and the port to which it is connected both belong to the same VLAN.

Each VLAN in a network has an associated VLAN ID, which appears in the IEEE 802.1Q tag in the Layer 2 header of packets transmitted on a VLAN. An end station might omit the tag, or the VLAN portion of the tag, in which case the first switch port to receive the packet can either reject it or insert a tag using its default VLAN ID. A given port can handle traffic for more than one VLAN, but it can support only one default VLAN ID.

The Private Edge VLAN feature lets you set protection between ports located on the switch. This means that a protected port cannot forward traffic to another protected port on the same switch. The feature does not provide protection between ports located on different switches.

The diagram in this section shows a switch with four ports configured to handle the traffic for two VLANs. Port 1/0/2 handles traffic for both VLANs, while port 1/0/1 is a member of VLAN 2 only, and ports 1/0/3 and 1/0/4 are members of VLAN 3 only. The script following the diagram shows the commands you would use to configure the switch as shown in the diagram.

The following examples show how to create VLANs, assign ports to the VLANs, and assign a VLAN as the default VLAN to a port.
Create Two VLANs

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Create Two VLANS**

Use the following commands to create two VLANs and to assign the VLAN IDs while leaving the names blank.

(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 2
(Netgear Switch) (Vlan)#vlan 3
(Netgear Switch) (Vlan)#exit

**Web Interface: Create Two VLANS**

1. Create VLAN2.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
      A screen similar to the following displays.

      ![VLAN Configuration Screen]

      b. Enter the following information:
         - In the **VLAN ID** field, enter 2.
         - In the **VLAN Name** field, enter VLAN2.
         - In the **VLAN Type** list, select **Static**.
   c. Click **Add**.

2. Create VLAN3.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
A screen similar to the following displays.

b. Enter the following information:
   • In the VLAN ID field, enter 3.
   • In the VLAN Name field, enter VLAN3.
   • In the VLAN Type list, select Static.
   c. Click Add.

Assign Ports to VLAN2

This sequence shows how to assign ports to VLAN2, and to specify that frames will always be transmitted tagged from all member ports and that untagged frames will be rejected on receipt.

CLI: Assign Ports to VLAN2

```bash
(Netgear Switch) #config
(Netgear Switch) (Config)#interface range 1/0/1-1/0/2
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#vlan participation include 2
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#vlan acceptframe vlanonly
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#vlan pvid 2
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#exit
(Netgear Switch) (Config)#vlan port tagging all 2
(Netgear Switch) (Config)#
```

Web Interface: Assign Ports to VLAN2

1. Assign ports to VLAN2.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
A screen similar to the following displays.

![VLAN Membership](image.png)

b. In the **VLAN ID** list, select 2.
c. Click **Unit 1**. The ports display.
d. Click the gray boxes under ports 1 and 2 until T displays.
The T specifies that the egress packet is tagged for the ports.
e. Click **Apply** to save the settings.

2. Specify that only tagged frames will be accepted on ports 1/0/1 and 1/0/2.
a. Select **Switching > VLAN > Advanced > Port PVID Configuration**.
   A screen similar to the following displays.

![Port VLAN ID Configuration](image.png)

b. Under PVID Configuration, scroll down and select the check box for Interface 1/0/1. Then scroll down and select the Interface 1/0/2 check box.
c. Enter the following information:
   • In the **Acceptable Frame Type polyhedron** list, select **VLAN Only**.
   • In the **PVID (1 to 4093)** field, enter 2.
d. Click **Apply** to save the settings.
Create Three VLANs

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Create Three VLANS**

Use the following commands to create three VLANs and to assign the VLAN IDs while leaving the names blank.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 100
(Netgear Switch) (Vlan)#vlan 101
(Netgear Switch) (Vlan)#vlan 102
(Netgear Switch) (Vlan)#exit
```

**Web Interface: Create Three VLANS**

1. Create VLAN100.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
      A screen similar to the following displays.

      ![VLAN Configuration Screen](image)

      b. Enter the following information:
         - In the **VLAN ID** field, enter **100**.
         - In the **VLAN Name** field, enter **VLAN100**.
      c. Click **Add**.

2. Create VLAN101.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
A screen similar to the following displays.

b. Enter the following information:
   • In the **VLAN ID** field, enter **101**.
   • In the **VLAN Name** field, enter **VLAN101**.

c. Click **Add**.

3. Create VLAN102.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
      A screen similar to the following displays.

b. Enter the following information:
   • In the **VLAN ID** field, enter **102**.
   • In the **VLAN Name** field, enter **VLAN102**.

c. Click **Add**.
Assign Ports to VLAN3

This example shows how to assign the ports that will belong to VLAN 3, and to specify that untagged frames will be accepted on port 1/0/4. Note that port 1/0/2 belongs to both VLANs and that port 1/0/1 can never belong to VLAN 3.

CLI: Assign Ports to VLAN3

```
(Netgear Switch) (Config)#interface range 1/0/2-1/0/4
(Netgear Switch) (conf-if-range-1/0/2-1/0/4)#vlan participation include 3
(Netgear Switch) (conf-if-range-1/0/2-1/0/4)#exit
(Netgear Switch) (Config)#interface 1/0/4
(Netgear Switch) (Interface 1/0/4)#vlan acceptframe all
(Netgear Switch) (Interface 1/0/4)#exit
(Netgear Switch) (Config)#exit
```

Web Interface: Assign Ports to VLAN3

1. Assign ports to VLAN3.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays.

      ![VLAN Membership Screen]

      b. In the VLAN ID list, select 3.
      c. Click Unit 1. The ports display.
      d. Click the gray boxes under ports 2, 3, and 4 until T displays.
         The T specifies that the egress packet is tagged for the ports.
      e. Click Apply to save the settings.

2. Specify that untagged frames will be accepted on port 1/0/4.
   a. Select Switching > VLAN > Advanced > Port PVID Configuration.
A screen similar to the following displays.

b. Scroll down and select the Interface 1/0/4 check box. Now 1/0/4 appears in the Interface field at the top.

c. In the Acceptable Frame Types list, select Admit All.

d. Click Apply to save the settings.

**Assign VLAN3 as the Default VLAN for Port 1/0/2**

This example shows how to assign VLAN 3 as the default VLAN for port 1/0/2.

**CLI: Assign VLAN3 as the Default VLAN for Port 1/0/2**

```
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 1/0/2
(Netgear Switch) (Interface 1/0/2)#vlan pvid 3
(Netgear Switch) (Interface 1/0/2)#exit
(Netgear Switch) (Config)#exit
```
Web Interface: Assign VLAN3 as the Default VLAN for Port 1/0/2

1. Select Switching > VLAN > Advanced > Port PVID Configuration.

A screen similar to the following displays.

2. Under PVID Configuration, scroll down and select the Interface 1/0/2 check box. Now 1/0/2 appears in the Interface field at the top.

3. In the PVID (1 to 4093) field, enter 3.

4. Click Apply to save the settings.

Create a MAC-Based VLAN

The MAC-based VLAN feature allows incoming untagged packets to be assigned to a VLAN and thus classify traffic based on the source MAC address of the packet.

You define a MAC to VLAN mapping by configuring an entry in the MAC to VLAN table. An entry is specified using a source MAC address and the appropriate VLAN ID. The MAC to
VLAN configurations are shared across all ports of the device (i.e., there is a system-wide table that has MAC address to VLAN ID mappings).

When untagged or priority tagged packets arrive at the switch and entries exist in the MAC to VLAN table, the source MAC address of the packet is looked up. If an entry is found, the corresponding VLAN ID is assigned to the packet. If the packet is already priority tagged it will maintain this value; otherwise, the priority will be set to 0 (zero). The assigned VLAN ID is verified against the VLAN table. If the VLAN is valid, ingress processing on the packet continues; otherwise, the packet is dropped. This implies that you can configure a MAC address mapping to a VLAN that has not been created on the system.

**CLI: Create a MAC-Based VLAN**

1. Create VLAN3.

   ```
   (Netgear Switch)#vlan database
   (Netgear Switch)(Vlan)#vlan 3
   (Netgear Switch)(Vlan)#exit
   ```

2. Add port 1/0/23 to VLAN3.

   ```
   (Netgear Switch)#config
   (Netgear Switch)(Config)#interface 1/0/23
   (Netgear Switch)(Interface 1/0/23)#vlan participation include 3
   (Netgear Switch)(Interface 1/0/23)#vlan pvid 3
   (Netgear Switch)(Interface 1/0/23)#exit
   ```

3. Map MAC 00:00:0A:00:00:02 to VLAN3.

   ```
   (Netgear Switch)(Config)#exit
   (Netgear Switch)#vlan data
   (Netgear Switch)(Vlan)#vlan association mac 00:00:0A:00:00:02 3
   (Netgear Switch)(Vlan)#exit
   ```

4. Add all the ports to VLAN3.

   ```
   (Netgear Switch)#config
   (Netgear Switch)(Config)#interface range 1/0/1-1/0/28
   (Netgear Switch)(conf-if-range-1/0/1-1/0/28)#vlan participation include 3
   (Netgear Switch)(conf-if-range-1/0/1-1/0/28)#exit
   ```
Web Interface: Assign a MAC-Based VLAN

1. Create VLAN3.
   a. Select Switching > VLAN > Basic > VLAN Configuration.
      A screen similar to the following displays.

      ![VLAN Configuration Screen]

      b. Enter the following information:
         - In the VLAN ID field, enter 3.
         - In the VLAN Name field, enter VLAN3.
         - In the VLAN Type list, select Static.
      c. Click Add.

2. Assign ports to VLAN3.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays.

      ![VLAN Membership Screen]

      b. In the VLAN ID list, select 3.
      c. Click Unit 1. The ports display.
      d. Click the gray box before Unit 1 until U displays.
      e. Click Apply.

3. Assign VPID3 to port 1/0/23.
   a. Select Switching > VLAN > Advanced > Port PVID Configuration.
A screen similar to the following displays.

![Port VLAN ID Configuration](image1)

b. Scroll down and select the **1/0/23** check box.

c. In the **PVID (1 to 4093)** field, enter **3**.

d. Click **Apply** to save the settings.

4. Map the specific MAC to VLAN3.

   a. Select **Switching > VLAN > Advanced > MAC based VLAN**.

      A screen similar to the following displays.

      ![MAC Based VLAN Configuration](image2)

   b. Enter the following information:

      • In the **MAC Address** field, enter **00:00:0A:00:00:02**.
      • In the **PVID (1 to 4093)** field, enter **3**.

   c. Click **Add**.

**Create a Protocol-Based VLAN**

Create two protocol VLAN groups. One is for IPX and the other is for IP/ARP. The untagged IPX packets are assigned to VLAN 4, and the untagged IP/ARP packets are assigned to VLAN 5.
CLI: Create a Protocol-Based VLAN

1. Create a VLAN protocol group vlan_ipx based on IPX protocol.

   ```
   (Netgear Switch)#config
   (Netgear Switch)(Config)#vlan protocol group vlan_ipx
   (Netgear Switch)(Config)#vlan protocol group add protocol 1 ipx
   ```

2. Create a VLAN protocol group vlan_ip based on IP/ARP protocol.

   ```
   (Netgear Switch)(Config)#vlan protocol group vlan_ip
   (Netgear Switch)(Config)#vlan protocol group add protocol 2 ip
   (Netgear Switch)(Config)#vlan protocol group add protocol 2 arp
   (Netgear Switch)(Config)#exit
   ```

3. Assign VLAN protocol group 1 to VLAN 4.

   ```
   (Netgear Switch)#vlan database
   (Netgear Switch)(Vlan)#vlan 4
   (Netgear Switch)(Vlan)#vlan 5
   (Netgear Switch)(Vlan)#protocol group 1 4
   ```

4. Assign VLAN protocol group 2 to VLAN 5.

   ```
   (Netgear Switch)(Vlan)#protocol group 2 5
   ```

5. Enable protocol VLAN group 1 and 2 on the interface.

   ```
   (Netgear Switch)(Vlan)#exit
   (Netgear Switch)#config
   (Netgear Switch)(Config)#interface 1/0/11
   (Netgear Switch)(Interface 1/0/11)#protocol vlan group 1
   (Netgear Switch)(Interface 1/0/11)#protocol vlan group 2
   (Netgear Switch)(Interface 1/0/11)#exit
   ```
Web Interface: Create a Protocol-Based VLAN

1. Create the protocol-based VLAN group vlan_ipx.
   a. Select Switching > VLAN > Advanced > Protocol Based VLAN Group Configuration.
      
      A screen similar to the following displays.

      Enter the following information:
      - In the Group Name field, enter vlan_ipx.
      - In the Protocol list, select IPX.
      - In the VLAN ID field, enter 4.

      b. Click Add.

2. Create the protocol-based VLAN group vlan_ip.
   a. Select Switching > VLAN > Advanced > Protocol Based VLAN Group Configuration.
      
      A screen similar to the following displays.

      b. Enter the following information:
         - In the Group Name field, enter vlan_ip.
         - In the Protocol list, select IP and ARP while holding down the Ctrl key.
         - In the VLAN field, enter 5.

      c. Click Add.

3. Add port 11 to the group vlan_ipx.
   a. Select Switching > VLAN > Advanced > Protocol Based VLAN Group Membership.
In the Group ID list, select 1.

Click the gray box under port 11. A check mark displays in the box.

Click the Apply button.

4. Add port 11 to the group vlan_ip.

a. Select Switching > VLAN > Advanced > Protocol Based VLAN Group Membership.

A screen similar to the following displays.

b. In the Group ID list, select 2.

c. Click the gray box under port 11. A check mark displays in the box.

d. Click Apply.

Virtual VLANs: Create an IP Subnet–Based VLAN

In an IP subnet–based VLAN, all the end workstations in an IP subnet are assigned to the same VLAN. In this VLAN, users can move their workstations without reconfiguring their network addresses. IP subnet VLANs are based on Layer 3 information from packet headers. The switch makes use of the network-layer address (for example, the subnet address for TCP/IP networks) in determining VLAN membership. If a packet is untagged or priority tagged, the switch associates the packet with any matching IP subnet classification. If no IP subnet classification can be made, the packet is subjected to the normal VLAN classification rules of the switch. This IP subnet capability does not imply a routing function or that the
VLAN is routed. The IP subnet classification feature affects only the VLAN assignment of a packet. Appropriate 802.1Q VLAN configuration must exist in order for the packet to be switched.

Figure 2. IP subnet–based VLAN

**CLI: Create an IP Subnet–Based VLAN**

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 2000
(Netgear Switch) (Vlan)#vlan association subnet 10.100.0.0 255.255.0.0 2000
(Netgear Switch) (Vlan)#exit
```

Create an IP subnet–based VLAN 2000.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#interface range 1/0/1-1/0/24
(Netgear Switch) (conf-if-range-1/0/1-1/0/24)# vlan participation include 2000
(Netgear Switch) (conf-if-range-1/0/1-1/0/24)#exit
(Netgear Switch) (Config)#
```

Assign all the ports to VLAN 2000.

```
(Netgear Switch) #show mac-addr-table vlan 2000
MAC Address     Interface     Status
-----------------  ---------  ------------
00:00:24:58:F5:56  1/0/1      Learned
00:00:24:59:00:62  1/0/24     Learned
```
Web Interface: Create an IP Subnet-Based VLAN

   a. Select Switching > VLAN > Basic > VLAN Configuration.
      A screen similar to the following displays.

      [Image of VLAN Configuration screen]

      b. Enter the following information:
         • In the VLAN ID field, enter 2000.
         • In the VLAN Type list, select Static.
      c. Click Add.

2. Assign all the ports to VLAN 2000.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays.

      [Image of VLAN Membership screen]

      b. In the VLAN ID list, select 2000.
      c. Click Unit 1. The ports display.
      d. Click the gray box before Unit 1 until U displays.
      e. Click Apply.

3. Associate the IP subnet with VLAN 2000.
   a. Select Switching > VLAN > Advanced > IP Subnet Based VLAN.
A screen similar to the following displays.

b. Enter the following information:
   • In the **IP Address** field, enter **10.100.0.0**.
   • In the **Subnet Mask** field, enter **255.255.0.0**.
   • In the **VLAN (1 to 4093)** field, enter **2000**.

c. Click **Add**.

**Voice VLANs**

The voice VLAN feature enables switch ports to carry voice traffic with defined priority to enable separation of voice and data traffic coming onto port. Voice VLAN ensures that the sound quality of an IP phone does not deteriorate when the data traffic on the port is high. Also, the inherent isolation provided by VLANs ensures that inter-VLAN traffic is under management control and that clients attached to the network cannot initiate a direct attack on voice components.
The script in this section shows how to configure Voice VLAN and prioritize the voice traffic. Here the Voice VLAN mode is in VLAN ID 10.

**CLI: Configure Voice VLAN and Prioritize Voice Traffic**

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 10
(Netgear Switch) (Vlan)#exit
```
2. Include the ports 1/0/1 and 1/0/2 in VLAN 10.

```
(Netgear Switch) (Config)# interface range 1/0/1-1/0/2
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)# vlan participation include 10
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)# vlan tagging 10
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)# exit
```

3. Configure Voice VLAN globally.

```
(Netgear Switch) (Config)# voice vlan
```

4. Configure Voice VLAN mode in the interface 1/0/2.

```
(Netgear Switch) (Config)# interface 1/0/2
(Netgear Switch) (Interface 1/0/2)# voice vlan 10
(Netgear Switch) (Interface 1/0/2)# exit
```

5. Create the DiffServ class ClassVoiceVLAN.

```
(Netgear Switch) (Config)# class-map match-all ClassVoiceVLAN
```

6. Configure VLAN 10 as the matching criteria for the class.

```
(Netgear Switch) (Config-classmap)# match vlan 10
```

7. Create the DiffServ policy PolicyVoiceVLAN.

```
(Netgear Switch) (Config)# policy-map PolicyVoiceVLAN in
```

8. Map the policy and class and assign them to the higher-priority queue.

```
(Netgear Switch) (Config-policy-map)# class ClassVoiceVLAN
(Netgear Switch) (Config-policy-classmap)# assign-queue 3
(Netgear Switch) (Config-policy-classmap)# exit
```

9. Assign it to interfaces 1/0/1 and 1/0/2.

```
(Netgear Switch) (Config)# interface range 1/0/1-1/0/2
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)# service-policy in PolicyVoiceVLAN
```
Web Interface: Configure Voice VLAN and Prioritize Voice Traffic

   a. Select Switching > VLAN > Basic > VLAN Configuration.
      A screen similar to the following displays.

      ![VLAN Configuration Screen]

   b. In the VLAN ID field, enter 10.
   c. In the VLAN Name field, enter Voice VLAN.
   d. Click Add. A screen similar to the following displays.

      ![VLAN Membership Screen]

2. Include the ports 1/0/1 and 1/0/2 in VLAN 10.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays.

      ![Advanced VLAN Membership Screen]
b. In the VLAN Membership table, in the VLAN ID list, select 10.

c. Select Port 1 and Port 2 as tagged.

A screen similar to the following displays.

![VLAN Membership Table]

d. Click Apply.

3. Configure Voice VLAN globally.

a. Select Switching > VLAN > Advanced > Voice VLAN Configuration.

A screen similar to the following displays.

![Voice VLAN Configuration]

b. For Admin Mode, select the Enable radio button.

c. Click Apply.
4. Configure Voice VLAN mode in the interface 1/0/2.
   a. Select Switching > VLAN > Advanced > Voice VLAN Configuration.
   b. Select the 1/0/2 check box.
   c. In the Interface Mode list, select VLAN ID.
   d. In the Value field, enter 10.

   A screen similar to the following displays.

   e. Click Apply.

5. Create the DiffServ class ClassVoiceVLAN.
   a. Select QoS > Advanced > DiffServ > Class Configuration.
A screen similar to the following displays.

b. In the **Class Name** field, enter **ClassVoiceVLAN**.

c. In the **Class Type** list, select **All**.

A screen similar to the following displays.

d. Click **Add**. The Class Name screen displays, as shown in the next step in this procedure.

6. Configure matching criteria for the class as **VLAN 10**.

a. Select **QoS > DiffServ > Advanced > Class Configuration**.

A screen similar to the following displays.

b. Click the class **ClassVoiceVLAN**.
A screen similar to the following displays.

![Screenshot](image)

c. In the DiffServ Class Configuration table, select **VLAN**.
d. In the VLAN ID field, enter 10.

A screen similar to the following displays.

![Screenshot](image)

e. Click **Apply**.

A screen similar to the following displays.

![Screenshot](image)

7. Create the DiffServ policy **PolicyVoiceVLAN**.
   a. Select **QoS > DiffServ > Advanced > Policy Configuration**.
b. In the **Policy Name** field, enter `PolicyVoiceVLAN`.

c. In the **Policy Type** list, select `In`.

d. In the **Member Class** list, select `ClassVoiceVLAN`.

A screen similar to the following displays.

e. Click **Add**.

The Policy Configuration screen displays, as shown in the next step in this procedure.

8. Map the policy and class and assign them to the higher-priority queue.

a. Select **QoS > DiffServ > Advanced > Policy Configuration**.

A screen similar to the following displays.
b. Click the **Policy PolicyVoiceVLAN**.
A screen similar to the following displays.

![Policy Configuration Screen](image)

A screen similar to the following displays.

![Assign Queue Selection](image)

c. In the field next to the **Assign Queue** radio button, select 3.
A screen similar to the following displays.

![Assign Queue Selection](image)

d. Click **Apply**.

9. Assign it to interfaces 1/0/1 and 1/0/2.
   a. Select **QoS > DiffServ > Advanced > Service Interface Configuration**.
   A screen similar to the following displays.

![Service Interface Configuration](image)

b. Select the check boxes for Interfaces 1/0/1 and 1/0/2.
   c. Set the **Policy Name** field as **PolicyVoiceVLAN**.
To configure Private VLANs on ProSAFE M4100 Managed Switches, follow these steps:

1. Access the VLAN configuration page.
2. In the VLAN configuration table, click on the appropriate VLAN to configure.
3. Click the "Isolate" column for the port you want to isolate.
4. Click the "Apply" button to apply the changes.

A screen similar to the following displays.

![Private VLAN Configuration Screen]

**Private VLANs**

The Private VLANs feature separates a regular VLAN domain into two or more sub domains. Each sub domain is defined (represented) by a primary VLAN and a secondary VLAN. The primary VLAN ID is the same for all sub domains that belong to a private VLAN. The secondary VLAN ID differentiates sub domains from each other and provides Layer 2 isolation between ports of the same private VLAN.

There are three types of VLAN within a private VLAN:

- **Primary VLAN**: Forwards the traffic from the promiscuous ports to isolated ports, community ports, and other promiscuous ports in the same private VLAN. Only one primary VLAN can be configured per private VLAN. All ports within a private VLAN share the same primary VLAN.

- **Community VLAN**: A secondary VLAN that forwards traffic between ports which belong to the same community and to the promiscuous ports. There can be multiple community VLANs per private VLAN.

- **Isolated VLAN**: A secondary VLAN that carries traffic from isolated ports to promiscuous ports. Only one isolated VLAN can be configured per private VLAN.
There are three types of port designation within a private VLAN:

- **Promiscuous port.** Belongs to a primary VLAN and can communicate with all interfaces in the private VLAN, including other promiscuous ports, community ports, and isolated ports.
- **Community port.** Communicates with other community ports and promiscuous ports.
- **Isolated port.** Communicates only with promiscuous ports.

The following figure illustrates that Private VLANs can be extended across multiple switches through inter-switch/stack links that transport primary, community, and isolated VLANs between devices.

![Private VLANs Diagram](image)

**Figure 4. Private VLANs**

The following figure illustrates the private VLAN traffic flow. Five ports A, B, C, D, and E make up a private VLAN. Port A is a promiscuous port which is associated with the primary VLAN 100. Ports B and C are the host ports which belong to the isolated VLAN 101. Ports D and E are the community ports which are associated with community VLAN 102. Port F is the inter-switch/stack link. It is configured to transmit VLANs 100, 101 and 102. Colored arrows represent possible packet flow paths in the private VLAN domain.
Assign Private-VLAN Types (Primary, Isolated, Community)

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Assign Private-VLAN Type (Primary, Isolated, Community)**

Use the following commands to assign VLAN 100 to primary VLAN, VLAN 101 to isolated VLAN, and VLAN 102 to community VLAN.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#vlan 100
(Netgear Switch) (Config)(Vlan) #private-vlan primary
(Netgear Switch) (Config)(Vlan) #exit
(Netgear Switch) (Config)#vlan 101
(Netgear Switch) (Config)(Vlan) #private-vlan isolated
(Netgear Switch) (Config)(Vlan) #exit
(Netgear Switch) (Config)#vlan 102
(Netgear Switch) (Config)(Vlan) #private-vlan community
(Netgear Switch) (Config)(Vlan) #end
```
Web Interface: Assign Private-VLAN Type (Primary, Isolated, Community)

   a. Select Security > Traffic Control > Private VLAN > Private VLAN Type Configuration. A screen similar to the following displays.
   b. Under Private VLAN Type Configuration, select the VLAN ID 100 check box. Now 100 appears in the interface field at the top.
   c. In the Private VLAN Type field, select Primary from the pull-down menu.
   d. Click Apply to save the settings

2. Assign VLAN 101 as an isolated VLAN.
      A screen similar to the following displays.
      b. Under Private VLAN Type Configuration, select the VLAN ID 101 check box. Now 101 appears in the interface field at the top.
c. In the Private VLAN Type field, select Isolated from the pull-down menu.

d. Click Apply to save the settings

3. Assign VLAN 102 to community VLAN.

A screen similar to the following displays.

b. Under Private VLAN Type Configuration, select the VLAN ID 102 check box. Now 102 appears in the interface field at the top.

c. In the Private VLAN Type field, select Community from the pull-down menu.

d. Click Apply to save the settings.

**Configure Private-VLAN Association**

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Private-VLAN Association**

Use the following commands to associate VLAN 101-102 (secondary VLAN) to VLAN 100 (primary VLAN).

```plaintext
(Netgear Switch) #config
(Netgear Switch) (Config)#vlan 100
(Netgear Switch) (Config)(Vlan) #private-vlan association 101-102
(Netgear Switch) (Config)(Vlan) #end
```

**Web Interface: Configure Private-VLAN Association**

1. Associate VLAN 101-102 (secondary VLAN) to VLAN 100 (primary VLAN).

A screen similar to the following displays.

b. Under **Private VLAN Association Configuration**, select the VLAN ID 100.
c. In the **Secondary VLAN(s)** field, type 101-102.
d. Click **Apply** to save the settings.

### Configure Private-VLAN Port Mode (Promiscuous, Host)

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Private-VLAN Port Mode (Promiscuous, Host)**

Use the following commands to assign port 1/0/1 to promiscuous port mode and ports 1/0/2-1/0/5 to host port mode.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 1/0/1
(Netgear Switch) (Interface 1/0/1)#switchport mode private-vlan promiscuous
(Netgear Switch) (Interface 1/0/1)#exit
(Netgear Switch) (Config)#interface 1/0/2-1/0/5
(Netgear Switch) (Interface 1/0/2-1/0/5)#switchport mode private-vlan host
(Netgear Switch) (Interface 1/0/2-1/0/5)#end
```

**Web Interface: Configure Private-VLAN Port Mode (Promiscuous, Host)**

1. Configure port 1/0/1 to promiscuous port mode.
   a. Select **Security > Traffic Control > Private VLAN > Private VLAN Port Mode Configuration.**
A screen similar to the following displays.

2. Configure ports 1/0/2-1/0/5 to host port mode.

   A screen similar to the following displays.

   b. Under Private VLAN Port Mode Configuration, select the 1/0/2 to 1/0/5 interface check box.
   c. In the Port VLAN Mode field, select Host from the pull-down menu.
   d. Click Apply to save the settings.
Configure Private-VLAN Host Ports

The example is shown as CLI commands and as a Web interface procedure.

CLI: Configure Private-VLAN Host Ports

Use the following commands to associate isolated ports 1/0/2-1/0/3 to a private-VLAN (primary=100, secondary=101). Community ports 1/0/4-1/0/5 to a private-VLAN (primary=100, secondary=102).

(Netgear Switch)  #config
(Netgear Switch)  (Config)#interface 1/0/2-1/0/3
(Netgear Switch)  (Interface 1/0/2-1/0/3)#switchport private-vlan host-association 100 101
(Netgear Switch)  (Interface 1/0/2-1/0/3)#exit
(Netgear Switch)  (Config)#interface 1/0/4-1/0/5
(Netgear Switch)  (Interface 1/0/4-1/0/5)#switchport private-vlan host-association 100 102
(Netgear Switch)  (Interface 1/0/4-1/0/5)#end

Web Interface: Assign Private-VLAN Port Host Ports

1. Associate isolated ports 1/0/2-1/0/3 to a private-VLAN (primary=100, secondary=101).
      A screen similar to the following displays.

      ![Private VLAN Host Interface Configuration Screen]

      b. Under Private VLAN Host Interface Configuration, select the 1/0/2 and 1/0/3 interface check box.

      c. In the Host Primary VLAN field, enter 100.
d. In the **Host Secondary VLAN** field, enter 101.
e. Click **Apply** to save the settings.

2. Associate isolated ports 1/0/4-1/0/5 to a private-VLAN (primary=100, secondary=102).
   a. Select **Security > Traffic Control > Private VLAN > Private VLAN Host Interface Configuration**.

A screen similar to the following displays.

![Private VLAN Host Interface Configuration](image)

b. Under **Private VLAN Host Interface Configuration**, select the 1/0/4 and 1/0/5 interface check box.
c. In the **Host Primary VLAN** field, enter 100.
d. In the **Host Secondary VLAN** field, enter 102.
e. Click **Apply** to save the settings.

### Map Private-VLAN Promiscuous Port

The example is shown as CLI commands and as a Web interface procedure.

#### CLI: Map Private-VLAN Promiscuous Port

Use the following commands to map private-VLAN promiscuous port 1/0/1 to a primary VLAN (100) and to secondary VLANs (101-102).

```plaintext
(Netgear Switch)  #config
(Netgear Switch)  (Config)#interface 1/0/1
(Netgear Switch)  (Interface 1/0/1)#switchport private-vlan mapping 100 101-102
(Netgear Switch)  (Interface 1/0/1)#end
```
Web Interface: Map Private-VLAN Promiscuous Port

1. Map private-VLAN promiscuous port 1/0/1 to a primary VLAN (100) and to selected secondary VLANs (101-102).
      A screen similar to the following displays.

![Private VLAN Promiscuous Interface Configuration Screen]

   b. Under Private VLAN Promiscuous Interface Configuration, select the 1/0/1 interface check box. Now 1/0/1 appears in the Interface field at the top.
   c. In the Promiscuous Primary VLAN field, enter 100.
   d. In the Promiscuous Secondary VLAN field, enter 101-102.
   e. Click Apply to save the settings.
LAGs

Link Aggregation Groups

This chapter includes the following sections:

- LAG Concepts
- Create Two LAGs
- Add Ports to LAGs
- Enable Both LAGs
LAG Concepts

Link aggregation allows the switch to treat multiple physical links between two endpoints as a single logical link. All the physical links in a given LAG must operate in full-duplex mode at the same speed. LAGs can be used to directly connect two switches when the traffic between them requires high bandwidth and reliability, or to provide a higher-bandwidth connection to a public network. Management functions treat a LAG as if it were a single physical port. You can include a LAG in a VLAN. You can configure more than one LAG for a given switch.

Figure 6. Example network with two LAGs

LAGs offer the following benefits:

- Increased reliability and availability. If one of the physical links in the LAG goes down, traffic is dynamically and transparently reassigned to one of the other physical links.
- Better use of physical resources. Traffic can be load-balanced across the physical links.
- Increased bandwidth. The aggregated physical links deliver higher bandwidth than each individual link.
- Incremental increase in bandwidth. A physical upgrade could produce a tenfold increase in bandwidth; LAG produces a two- or fivefold increase, useful if only a small increase is needed.
Create Two LAGs

The example is shown as CLI commands and as a Web interface procedure.

CLI: Create Two LAGs

```
(Netgear Switch) #config
(Netgear Switch) (Config)#port-channel name lag 1 lag_10
(Netgear Switch) (Config)#port-channel name lag 1 lag_20
(Netgear Switch) (Config)#exit
```

Use the show port-channel all command to show the logical interface IDs you will use to identify the LAGs in subsequent commands. Assume that lag_10 is assigned ID 1/1, and lag_20 is assigned ID 1/2.

```
(Console) #show port-channel all

<table>
<thead>
<tr>
<th>Port-</th>

</tr>
</tbody>
</table>
```

Web Interface: Create Two LAGs

1. Create LAG lag_10.
   a. Select Switching > LAG > LAG Configuration.
      A screen similar to the following displays.

   ![Lag Configuration Screen](image)

   b. In the Lag Name field, enter lag_10.
   c. Click Add.

2. Create LAG lag_20.
a. Select **Switching > LAG > LAG Configuration**. A screen similar to the following displays.

![LAG Configuration Screen](image)

b. In the **Lag Name** field, enter **lag_20**.

c. Click **Add**.

### Add Ports to LAGs

The example is shown as CLI commands and as a Web interface procedure.

#### CLI: Add Ports to the LAGs

```
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 0/2
(Netgear Switch) (Interface 0/2)#addport 1/1
(Netgear Switch) (Interface 0/2)#exit
(Netgear Switch) (Config)#interface 0/3
(Netgear Switch) (Interface 0/3)#addport 1/1
(Netgear Switch) (Interface 0/3)#exit
(Netgear Switch) (Config)#interface 0/8
(Netgear Switch) (Interface 0/8)#addport 1/2
(Netgear Switch) (Interface 0/8)#exit
(Netgear Switch) (Config)#interface 0/9
(Netgear Switch) (Interface 0/9)#addport 1/2
(Netgear Switch) (Interface 0/9)#exit
(Netgear Switch) (Config)#exit
```

#### Web Interface: Add Ports to LAGs

1. Add ports to **lag_10**.
   
a. Select **Switching > LAG > LAG Membership**.
b. In the LAG ID list, select LAG 1.
c. Click Unit 1. The ports display.
d. Click the gray boxes under port 2 and 3.
   Two check marks display in the box.
e. Click Apply to save the settings.

2. Add ports to lag_20.
a. Select Switching > LAG > LAG Membership.
   A screen similar to the following displays.

b. Under LAG Membership, in the LAG ID list, select LAG 2.
c. Click Unit 1. The ports display.
d. Click the gray boxes under ports 8 and 9.
   Two check marks display in the boxes.
e. Click Apply to save the settings.
Enable Both LAGs

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Enable Both LAGs**

By default, the system enables link trap notification.

```
(Console) #config
(Console) (Config)#port-channel adminmode all
(Console) (Config)#exit
```

At this point, the LAGs could be added to VLANs.

**Web Interface: Enable Both LAGs**

a. Select Switching > LAG > LAG Configuration. A screen similar to the following displays.

b. Select the top check box and the check boxes for lag_10 and lag_20 are selected.

c. In the Admin Mode field, select Enable.

d. Click Apply to save the settings.
Port Routing

Port routing, default routes, and static routes

This chapter includes the following sections:

- Port Routing Concepts
- Port Routing Configuration
- Enable Routing for the Switch
- Enable Routing for Ports on the Switch
- Add a Default Route
- Add a Static Route
Port Routing Concepts

The first networks were small enough for the end stations to communicate directly. As networks grew, Layer 2 bridging was used to segregate traffic, a technology that worked well for unicast traffic, but had problems coping with large quantities of multicast packets. The next major development was routing, where packets were examined and redirected at Layer 3. End stations needed to know how to reach their nearest router, and the routers had to interpret the network topology so that they could forward traffic. Although bridges tended to be faster than routers, using routers allowed the network to be partitioned into logical subnetworks, which restricted multicast traffic and also facilitated the development of security mechanisms.

An end station specifies the destination station’s Layer 3 address in the packet’s IP header, but sends the packet to the MAC address of a router. When the Layer 3 router receives the packet, it will minimally:

- Look up the Layer 3 address in its address table to determine the outbound port.
- Update the Layer 3 header.
- Re-create the Layer 2 header.

The router’s IP address is often statically configured in the end station, although the M4100 Managed Switch supports protocols such as DHCP that allow the address to be assigned dynamically. Likewise, you can assign some of the entries in the routing tables used by the router statically, but protocols such as RIP and OSPF allow the tables to be created and updated dynamically as the network configuration changes.

Port Routing Configuration

The M4100 Managed Switch always supports Layer 2 bridging, but Layer 3 routing must be explicitly enabled, first for the M4100 Managed Switch as a whole, and then for each port that is to be part of the routed network.

The configuration commands used in the example in this section enable IP routing on ports 1/0/2, 1/0/3, and 1/0/5. The router ID will be set to the M4100 Managed Switch’s management IP address, or to that of any active router interface if the management address is not configured.

After the routing configuration commands have been issued, the following functions will be active:

- IP forwarding, responsible for forwarding received IP packets.
- ARP mapping, responsible for maintaining the ARP Table used to correlate IP and MAC addresses. The table contains both static entries and entries dynamically updated based on information in received ARP frames.
- Routing Table Object, responsible for maintaining the common routing table used by all registered routing protocols.
You can then activate RIP or OSPF, used by routers to exchange route information, on top of IP Routing. RIP is more often used in smaller networks, while OSPF was designed for larger and more complex topologies.

The following figure shows a Layer 3 switch configured for port routing. It connects three different subnets, each connected to a different port.

![Layer 3 switch configured for port routing](image)

**Figure 7. Layer 3 switch configured for port routing**

### Enable Routing for the Switch

The example is shown as CLI commands and as a Web interface procedure.

#### CLI: Enable Routing for the Switch

The following script shows the commands that you would use to configure a M4100 Managed Switch to provide the port routing support shown in *Figure 7, Layer 3 switch configured for port routing* on page 59.

Use the following command to enable routing for the switch. Execution of the command enables IP forwarding by default.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#ip routing
(Netgear Switch) (Config)#exit
```
Web Interface: Enable Routing for the Switch

1. Select **Routing > IP > Basic > IP Configuration**.
   
   A screen similar to the following displays.

   ![IP Configuration Screen](image)

2. For Routing Mode, select the **Enable** radio button.
3. Click **Apply** to save the settings.

Enable Routing for Ports on the Switch

Use the following commands or the web interface to enable routing for ports on the switch. The default link-level encapsulation format is Ethernet. Configure the IP addresses and subnet masks for the ports. Network-directed broadcast frames will be dropped. The maximum transmission unit (MTU) size is 1500 bytes.

**CLI: Enable Routing for Ports on the Switch**

```bash
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 1/0/2
(Netgear Switch) (Interface 1/0/2)#routing
(Netgear Switch) (Interface 1/0/2)#ip address 192.150.2.1 255.255.255.0
(Netgear Switch) (Interface 1/0/2)#exit

(Netgear Switch) (Config)#interface 1/0/3
(Netgear Switch) (Interface 1/0/3)#routing
(Netgear Switch) (Interface 1/0/3)#ip address 192.150.3.1 255.255.255.0
(Netgear Switch) (Interface 1/0/3)#exit

(Netgear Switch) (Config)#interface 1/0/5
(Netgear Switch) (Interface 1/0/5)#routing
(Netgear Switch) (Interface 1/0/5)#ip address 192.150.5.1 255.255.255.0
(Netgear Switch) (Interface 1/0/5)#exit
(Netgear Switch) (Config)#exit
```
Web Interface: Enable Routing for Ports on the Switch

1. Assign IP address 192.150.2.1/24 to interface 1/0/2.
   a. Select Routing > IP > Advanced > IP Interface Configuration.
      A screen similar to the following displays.

      ![IP Interface Configuration Screen](image)

      b. Scroll down and select the interface 1/0/2 check box.
         Now 1/0/2 appears in the Interface field at the top.

      c. Under the IP Interface Configuration, enter the following information:
         - In the IP Address field, enter 192.150.2.1.
         - In the Subnet Mask field, enter 255.255.255.0.
         - In the Routing Mode field, select Enable.

      d. Click Apply to save the settings.

2. Assign IP address 192.150.3.1/24 to interface 1/0/3.
   a. Select Routing > IP > Advanced > IP Interface Configuration.
      A screen similar to the following displays.

      ![IP Interface Configuration Screen](image)

      b. Scroll down and select the interface 1/0/3 check box.
Port Routing

Now 1/0/3 appears in the Interface field at the top.

c. Enter the following information:
   • In the **IP Address** field, enter **192.150.3.1**.
   • In the **Subnet Mask** field, enter **255.255.255.0**.
   • In the **Routing Mode** field, select **Enable**.

d. Click **Apply** to save the settings.

3. Assign IP address 192.150.5.1/24 to interface 1/0/5.
   a. Select **Routing > IP > Advanced > IP Interface Configuration**.

   A screen similar to the following displays.

   ![IP Interface Configuration screen](image)

   b. Scroll down and select the interface 1/0/5 check box.

   Now 1/0/5 appears in the Interface field at the top.

c. Enter the following information:
   • In the **IP Address** field, enter **192.150.5.1**.
   • In the **Subnet Mask** field, enter **255.255.255.0**.
   • In the **Routing Mode** field, select **Enable**.

d. Click **Apply** to save the settings.

Add a Default Route

When IP routing takes place on a switch, a routing table is needed for the switch to forward the packet based on the destination IP address. The route entry in the routing table can either be created dynamically through routing protocols like RIP and OSPF, or be manually created by the network administrator. The route created manually is called the static or default route.

A default route is used for forwarding the packet when the switch cannot find a match in the routing table for an IP packet. The following example shows how to create a default route.
### CLI: Add a Default Route

```
(FSM7338S) (Config) #ip route default?
<nexthopip> Enter the IP Address of the next router.
(FSM7328S) (Config)#ip route default 10.10.10.2
```

**Note:** IP subnet 10.10.10.0 should be configured using either port routing (see *Enable Routing for Ports on the Switch* on page 60) or VLAN routing (see *Set Up VLAN Routing for the VLANs and the Switch* on page 72).

### Web Interface: Add a Default Route

1. Select **Routing > Routing Table > Basic > Route Configuration**.

   The Route Configuration screen displays.

   ![Route Configuration Screen](image)

2. In the **Route Type** list, select **DefaultRoute**.

3. In the **Next Hop IP Address** field, enter one of the routing interface’s IP addresses.
   - The **Network Address** and **Subnet Mask** fields will not accept input as they are not needed.
   - The **Preference** field is optional. A value of 1 (highest) will be assigned by default if not specified.

4. Click the **Add** button on the bottom of the screen.

   This creates the default route entry in the routing table.
Add a Static Route

When the switch performs IP routing, it forwards the packet to the default route for a destination that is not in the same subnet as the source address. However, you can set a path (static route) that is different than the default route if you prefer. The following procedure shows how to add a static route to the switch routing table.

**CLI: Add a Static Route**

The following commands assume that the switch already has a defined a routing interface with a network address of 10.10.10.0, and is configured so that all packets destined for network 10.10.100.0 take the path of routing port.

```
(FSM7328S) #show ip route

Total Number of Routes.........................1

<table>
<thead>
<tr>
<th>Network Address</th>
<th>Subnet Mask</th>
<th>Protocol</th>
<th>Intf</th>
<th>IP Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>10.10.10.0</td>
<td>255.255.255.0</td>
<td>Local</td>
<td>1/0/3</td>
<td>10.10.10.1</td>
</tr>
</tbody>
</table>
```

To delete the static route, simply add “no” keyword in the front of the “ip route” command.

**Web Interface: Add a Static Route**

1. Select **Routing > Routing Table > Basic > Route Configuration** to display the Route Configuration screen.

2. In the **Route Type** list, select **Static**.

3. Fill in the **Network Address** field.

   Note that this field should have a network IP address, not a host IP address. Do not enter something like 10.100.100.1. The last number should always be 0 (zero).
4. In the **Subnet Mask** field, enter a value that matches the subnet range that you want to use.

5. The **Preference** field is optional. A value of 1 is entered by default if you do not enter a number.

6. Click the **Add** button on the bottom of the screen. The screen is updated with the static route shown in the routing table.

7. To remove a route entry, either static or default, select the check box to the left of the entry, and click the **Delete** button on the bottom of the screen.
VLAN Routing

VLAN routing for a VLAN and for the switch

This chapter includes the following sections:

- VLAN Routing Concepts
- Create Two VLANs
- Set Up VLAN Routing for the VLANs and the Switch
**VLAN Routing Concepts**

You can configure the ProSAFE M4100 Managed Switches with some ports supporting VLANs and some supporting routing. You can also configure it to allow traffic on a VLAN to be treated as if the VLAN were a router port.

When a port is enabled for bridging (the default) rather than routing, all normal bridge processing is performed for an inbound packet, which is then associated with a VLAN. Its MAC destination address (DA) and VLAN ID are used to search the MAC address table. If routing is enabled for the VLAN and the MAC DA of an inbound unicast packet is that of the internal bridge-router interface, the packet is routed. An inbound multicast packet is forwarded to all ports in the VLAN, and also to the internal bridge-router interface if it was received on a routed VLAN.

Since a port can be configured to belong to more than one VLAN, VLAN routing might be enabled for all of the VLANs on the port, or for a subset. VLAN routing can be used to allow more than one physical port to reside on the same subnet. It could also be used when a VLAN spans multiple physical networks, or when more segmentation or security is required.

The next section shows you how to configure the ProSAFE M4100 Managed Switches to support VLAN routing and how to use RIP and OSPF. A port can be either a VLAN port or a router port, but not both. However, a VLAN port can be part of a VLAN that is itself a router port.

**Create Two VLANs**

This section provides an example of how to configure the M4100 Managed Switch to support VLAN routing. The configuration of the VLAN router port is similar to that of a physical port. The main difference is that, after the VLAN has been created, you must use the `show ip vlan` command to determine the VLAN’s interface ID so that you can use it in the router configuration commands.

The diagram in this section shows a Layer 3 switch configured for port routing. It connects two VLANs, with two ports participating in one VLAN, and one port in the other. The script shows the commands that you would use to configure a M4100 Managed Switch to provide the VLAN routing support shown in the diagram.
**CLI: Create Two VLANs**

The following code sequence shows an example of creating two VLANs with egress frame tagging enabled.

```
(Netgear Switch) #vlan data
(Netgear Switch) (Vlan)#vlan 10
(Netgear Switch) (Vlan)#vlan 20
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #conf
(Netgear Switch) (Config)#interface range 1/0/1-1/0/2
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#vlan participation include 10
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#vlan pvid 10
(Netgear Switch) (conf-if-range-1/0/1-1/0/2)#exit
(Netgear Switch) (Config)#interface 1/0/3
(Netgear Switch) (Interface 1/0/3)#vlan participation include 20
(Netgear Switch) (Interface 1/0/3)#vlan pvid 20
(Netgear Switch) (Interface 1/0/3)#exit
(Netgear Switch) (Config)#exit
```
Web Interface: Create Two VLANs

1. Create VLAN 10 and VLAN20.
   a. Select Switching > VLAN > Advanced > VLAN Configuration.
      A screen similar to the following displays.

   b. In the VLAN ID field, enter 10.
   c. In the VLAN Name field, enter VLAN10.
   d. In the VLAN Type list, select Static.
   e. Click Add.
   f. Select Switching > VLAN > Advanced > VLAN Configuration.
      A screen similar to the following displays.

   g. In the VLAN ID field, enter 20.
   h. In the VLAN Name field, enter VLAN20.
   i. In the VLAN Type list, select Static.
   j. Click Add.

2. Add ports to the VLAN10 and VLAN20.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
A screen similar to the following displays.

![VLAN Membership screen](image)

b. In the **VLAN ID** field, select **10**.

c. Click the **Unit 1**. The ports display.

d. Click the gray boxes under ports **1** and **2** until **T** displays.

   The T specifies that the egress packet is tagged for the port.

e. Click **Apply**.

f. Select **Switching > VLAN > Advanced > VLAN Membership**.

   A screen similar to the following displays.

![VLAN Membership screen](image)

g. In the **VLAN ID** list, select **20**.

h. Click **Unit 1**. The ports display.

   i. Click the gray box under port **3** until **T** displays.

   The T specifies that the egress packet is tagged for the port.

j. Click **Apply**.

3. **Assign PVID to VLAN10 and VLAN20.**

   a. Select **Switching > VLAN > Advanced > Port PVID Configuration**.
A screen similar to the following displays.

![Image of VLAN Routing configuration](image)

b. Scroll down and select 1/0/1 and 1/0/2 check boxes.
c. In the PVID (1 to 4093) field, enter 10.
d. Click Apply to save the settings.
e. Select Switching > VLAN > Advanced > Port PVID Configuration.
A screen similar to the following displays.

![Image of VLAN Routing configuration](image)
f. Scroll down and select the 1/0/3 check box.
g. In the PVID (1 to 4093) field, enter 20.
h. Click Apply to save the settings.
Set Up VLAN Routing for the VLANs and the Switch

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Set Up VLAN Routing for the VLANs and the Switch**

1. The following code sequence shows how to enable routing for the VLANs:

   ```sh
   (Netgear Switch) #vlan data
   (Netgear Switch) (Vlan)#vlan routing 10
   (Netgear Switch) (Vlan)#vlan routing 20
   (Netgear Switch) (Vlan)#exit
   
   This returns the logical interface IDs that will be used instead of the slot/port in subsequent routing commands. Assume that VLAN 10 is assigned the ID 3/1, and VLAN 20 is assigned the ID 3/2.
   
2. Enable routing for the switch.

   ```sh
   (Netgear Switch) #config
   (Netgear Switch) (Config)#ip routing
   (Netgear Switch) (Config)#exit
   
   3. The next sequence shows an example of configuring the IP addresses and subnet masks for the virtual router ports.

   ```sh
   (Netgear Switch) (Config)#interface vlan 10
   (Netgear Switch) (Interface-vlan 10)#ip address 192.150.3.1 255.255.255.0
   (Netgear Switch) (Interface-vlan 10)#exit
   (Netgear Switch) (Config)#interface vlan 20
   (Netgear Switch) (Interface-vlan 20)#ip address 192.150.4.1 255.255.255.0
   (Netgear Switch) (Interface-vlan 20)#exit
   ```
Web Interface: Set Up VLAN Routing for the VLANs and the Switch

1. Select Routing > VLAN > VLAN Routing.

A screen similar to the following displays.

2. Enter the following information:
   - In the VLAN ID (1 to 4093) list, select 10.
   - In the IP Address field, enter 192.150.3.1.
   - In the Subnet Mask field, enter 255.255.255.0.

3. Click Add to save the settings.

4. Select Routing > VLAN > VLAN Routing. A screen similar to the following displays.

5. Enter the following information:
   - Select 10 in the VLAN ID (1 to 4093) field.
   - In the IP Address field, enter 192.150.4.1.
   - In the Subnet Mask field, enter 255.255.255.0.

6. Click Add to save the settings.
Proxy ARP

Proxy Address Resolution Protocol

This chapter includes the following sections:

- Proxy ARP Concepts
- Proxy ARP Examples
Proxy ARP Concepts

Proxy ARP allows a router to answer ARP requests when the target IP address is not that of the router itself but a destination that the router can reach. If a host does not know the default gateway, proxy ARP can learn the first hop. Machines in one physical network appear to be part of another logical network. Without proxy ARP, a router responds to an ARP request only if the target IP address is an address configured on the interface where the ARP request arrived.

Proxy ARP Examples

The following are examples of the commands used in the proxy ARP feature.

CLI: show ip interface

(Netgear Switch) #show ip interface ?
<slot/port> Enter an interface in slot/port format.
brief Display summary information about IP configuration settings for all ports.

(Netgear Switch) #show ip interface 0/24
Routing Mode................................... Disable
Administrative Mode............................ Enable

CLI: ip proxy-arp

(Netgear Switch) (Interface 0/24)#ip proxy-arp ?
<cr> Press Enter to execute the command.

(Netgear Switch) (Interface 0/24)#ip proxy-arp
Web Interface: Configure Proxy ARP on a Port

1. Select Routing > IP > Advanced > IP Interface Configuration.
   A screen similar to the following displays.

2. Under Configuration, scroll down and select the Interface 1/0/3 check box. Now 1/0/3 appears in the Interface field at the top.
3. In the Proxy Arp field, select Enable.
4. Click Apply to save the settings.
This chapter includes the following sections:

- **ACL Concepts**
- **Set Up an IP ACL with Two Rules**
- **One-Way Access Using a TCP Flag in an ACL**
- **Use ACLs to Configure Isolated VLANs on a Layer 3 Switch**
- **Set up a MAC ACL with Two Rules**
- **ACL Mirroring**
- **ACL Redirection**
- **Configure IPv6 ACLs**
ACL Concepts

Access control lists (ACLs) can control the traffic entering a network. Normally ACLs reside in a firewall router or in a router connecting two internal networks. When you configure ACLs, you can selectively admit or reject inbound traffic, thereby controlling access to your network or to specific resources on your network.

You can set up ACLs to control traffic at Layer 2-, or Layer 3. MAC ACLs are used for Layer 2. IP ACLs are used for Layer 3. Each ACL contains a set of rules that apply to inbound traffic. Each rule specifies whether the contents of a given field should be used to permit or deny access to the network, and may apply to one or more of the fields within a packet.

The following limitations apply to ACLs. These limitations are platform dependent.

- The maximum of number of ACLs is 100.
- The maximum number of rules per ACL is 8–10.
- Stacking systems do not support redirection.
- The system does not support MAC ACLs and IP ACLs on the same interface.
- The system supports ACLs set up for inbound traffic only.

MAC ACLs

MAC ACLs are Layer 2 ACLs. You can configure the rules to inspect the following fields of a packet (limited by platform):

- Source MAC address with mask.
- Destination MAC address with mask.
- VLAN ID (or range of IDs).
- Class of Service (CoS) (802.1p).
- EtherType:
  - Secondary CoS (802.1p).
  - Secondary VLAN (or range of IDs).
- L2 ACLs can apply to one or more interfaces.
- Multiple access lists can be applied to a single interface: the sequence number determines the order of execution.
- You cannot configure a MAC ACL and an IP ACL on the same interface.
- You can assign packets to queues using the assign queue option.
- You can redirect packets using the redirect option.
IP ACLs

IP ACLs classify for Layer 3. Each ACL is a set of up to 10 rules applied to inbound traffic. Each rule specifies whether the contents of a given field should be used to permit or deny access to the network, and can apply to one or more of the following fields within a packet:

- Source IP address
- Destination IP address
- Source Layer 4 port
- Destination Layer 4 port
- ToS byte
- Protocol number

Note that the order of the rules is important: When a packet matches multiple rules, the first rule takes precedence. Also, once you define an ACL for a given port, all traffic not specifically permitted by the ACL is denied access.

ACL Configuration

To configure ACLs:

1. Create an ACL by specifying a name (MAC ACL) or a number (IP ACL).
2. Add new rules to the ACL.
3. Configure the match criteria for the rules.
4. Apply the ACL to one or more interfaces.

Set Up an IP ACL with Two Rules

This section shows you how to set up an IP ACL with two rules, one applicable to TCP traffic and one to UDP traffic. The content of the two rules is the same. TCP and UDP packets will be accepted by the M4100 Managed Switch only if the source and destination stations have IP addresses within the defined sets.
CLI: Set Up an IP ACL with Two Rules

The following is an example of configuring ACL support on a 7000 Series Managed Switch.

Create ACL 101. Define the first rule: The ACL will permit packets that match the specified source IP address (after the mask has been applied), that are carrying TCP traffic, and that are sent to the specified destination IP address.

1. Enter these commands:

```
(Netgear Switch) #config
(Netgear Switch) (Config)#access-list 101 permit tcp 192.168.77.0 0.0.0.255 192.178.77.0 0.0.0.255
```

2. Define the second rule for ACL 101 to set conditions for UDP traffic similar to those for TCP traffic.

```
(Netgear Switch) (Config)#access-list 101 permit udp 192.168.77.0 0.0.0.255 192.178.77.0 0.0.0.255
```
3. Apply the rule to inbound traffic on port 1/0/2. Only traffic matching the criteria will be accepted.

```
(Netgear Switch) (Config)#interface 1/0/2
(Netgear Switch) (Interface 1/0/2)#ip access-group 101 in
(Netgear Switch) (Interface 1/0/2)#exit
(Netgear Switch) (Config)#exit
```

**Web Interface: Set Up an IP ACL with Two Rules**

1. Create IP ACL 101 on the switch.
   a. Select Security > ACL > IP ACL.
      A screen similar to the following displays.

      ![IP ACL screen](image)

      b. In the IP ACL ID field, enter 101.
      c. Click Add to create ACL 101.

2. Create a new rule associated with ACL 101.
      A screen similar to the following displays.

      ![IP Extended Rules screen](image)

      b. For ACL ID, select 101.
      c. Click Add to create a new rule.

3. Create a new ACL rule and add it to ACL 101.
   a. After you click the Add button in step 2.
A screen similar to the following displays.

![Extended ACL Rule Configuration](image)

a. In the Extended ACL Rule Configuration, enter the following information:
   - In the **Rule ID (1 to 23)** field, enter 1.
   - For Action, select the **Permit** radio button.
   - In the **Protocol Type** list, select **TCP**.
   - In the **Source IP Address** field, enter **192.168.77.0**.
   - In the **Source IP Mask** field, enter **0.0.0.255**.
   - In the **Destination IP Address** field, enter **192.178.77.0**.
   - In the **Destination IP Mask** field, enter **0.0.0.255**.

b. Click **Apply** to save the settings.

4. Create another ACL rule and add it to the ACL 101.

   a. After you click the Add button in step 3, a screen similar to the following displays.
b. Under Extended ACL Rule Configuration, enter the following information:
   - In the Rule ID (1 to 23) field, enter 22.
   - For Action, select the Permit radio button.
   - In the Protocol Type list, select UDP.
   - In the Source IP Address field, enter 192.168.77.0.
   - In the Source IP Mask field, enter 0.0.0.255.
   - In the Destination IP Address field, enter 192.178.77.0.
   - In the Destination IP Mask field, enter 0.0.0.255.

c. Click Apply to save the settings.

5. Apply ACL 101 to port 2.

A screen similar to the following displays.

b. Under IP Binding Configuration, enter the following information:
   - In the ACL ID list, select 10.
   - In the Sequence Number field, enter 1.

c. Click Unit 1. The ports display.

d. Click the gray box under port 2. A check mark displays in the box.

e. Click Apply to save the settings.
**One-Way Access Using a TCP Flag in an ACL**

This example shows how to set up one-way Web access using a TCP flag in an ACL. PC 1 can access FTP server 1 and FTP server 2, but PC 2 can access only FTP server 2.

![Diagram](image)

**Figure 10. One-Way Web access using a TCP flag in an ACL**

**CLI: Configure One-Way Access Using a TCP Flag in an ACL**

This configuration consists of two step:

- *Step 1: Configure the Switch* on page 85
- *Step 2: Configure the GSM7352S* on page 86
Step 1: Configure the Switch

1. Create VLAN 30 with port 0/35 and assign IP address 192.168.30.1/24.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 30
(Netgear Switch) (Vlan)#vlan routing 30
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 0/35
(Netgear Switch) (Interface 0/35)#vlan pvid 30
(Netgear Switch) (Interface 0/35)#vlan participation include 30
(Netgear Switch) (Interface 0/35)#exit
(Netgear Switch) (Config)#interface vlan 30
(Netgear Switch) (Interface-vlan 30)#routing
(Netgear Switch) (Interface-vlan 30)#ip address 192.168.30.1 255.255.255.0
(Netgear Switch) (Interface-vlan 30)#exit
(Netgear Switch) (Config)#exit
```

2. Create VLAN 100 with port 0/13 and assign IP address 192.168.100.1/24.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 100
(Netgear Switch) (Vlan)#vlan routing 100
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #configure
(Netgear Switch) (Config)#interface 0/13
(Netgear Switch) (Interface 0/13)#vlan pvid 100
(Netgear Switch) (Interface 0/13)#vlan participation include 100
(Netgear Switch) (Interface 0/13)#exit
(Netgear Switch) (Config)#interface vlan 100
(Netgear Switch) (Interface-vlan 100)#routing
(Netgear Switch) (Interface-vlan 100)#ip address 192.168.100.1 255.255.255.0
(Netgear Switch) (Interface-vlan 100)#exit
(Netgear Switch) (Config)#exit
```
3. Create VLAN 200 with port 0/44 and assign IP address 192.168.200.1/24.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 200
(Netgear Switch) (Vlan)#vlan routing 200
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #configure
(Netgear Switch) (Config)#interface 0/44
(Netgear Switch) (Interface 0/44)#vlan pvid 200
(Netgear Switch) (Interface 0/44)#vlan participation include 200
(Netgear Switch) (Interface 0/44)#exit
(Netgear Switch) (Config)#interface vlan 200
(Netgear Switch) (Interface-vlan 200)#routing
(Netgear Switch) (Interface-vlan 200)#ip address 192.168.200.1 255.255.255.0
(Netgear Switch) (Interface-vlan 200)#exit
```

4. Add two static routes so that the switch forwards the packets for which the destinations are 192.168.40.0/24 and 192.168.50.0/24 to the correct next hops.

```
(Netgear Switch) (Config)#ip routing
(Netgear Switch) (Config)#ip route 192.168.40.0 255.255.255.0 192.168.200.2
(Netgear Switch) (Config)#ip route 192.168.50.0 255.255.255.0 192.168.200.2
```

5. Create an ACL that denies all the packets with TCP flags +syn-ack.

```
(Netgear Switch) (Config)#access-list 101 deny tcp any flag +syn -ack
```

6. Create an ACL that permits all the IP packets.

```
(Netgear Switch) (Config)#access-list 102 permit ip any
```

7. Apply ACLs 101 and 102 to port 0/44; the sequence of 101 is 1 and of 102 is 2.

**Step 2: Configure the GSM7352S**

1. Enter the following commands.

```
(Netgear Switch) (Config)#interface 0/44
(Netgear Switch) (Interface 0/44)#ip access-group 101 in 1
(Netgear Switch) (Interface 0/44)#ip access-group 102 in 2
(Netgear Switch) (Interface 0/44)#exit
```
2. Create VLAN 40 with port 1/0/24 and assign IP address 192.168.40.1/24.

```
(Netgear Switch) vlan database
(Netgear Switch) (Vlan)#vlan 40
(Netgear Switch) (Vlan)#vlan routing 40
(Netgear Switch) #configure
(Netgear Switch) (Config)#interface 1/0/24
(Netgear Switch) (Interface 1/0/24)#vlan pvid 40
(Netgear Switch) (Interface 1/0/24)#vlan participation include 40
(Netgear Switch) (Interface 1/0/24)#exit
(Netgear Switch) (Config)#interface vlan 40
(Netgear Switch) (Interface-vlan 40)#routing
(Netgear Switch) (Interface-vlan 40)#ip address 192.168.40.1 255.255.255.0
(Netgear Switch) (Interface-vlan 40)#exit
```

3. Create VLAN 50 with port 1/0/25 and assign IP address 192.168.50.1/24.

```
(Netgear Switch) (Config)#exit
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 50
(Netgear Switch) (Vlan)#vlan routing 50
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #configure
(Netgear Switch) (Config)#interface 1/0/25
(Netgear Switch) (Interface 1/0/25)#vlan pvid 50
(Netgear Switch) (Interface 1/0/25)#vlan participation include 50
(Netgear Switch) (Interface 1/0/25)#exit
(Netgear Switch) (Config)#interface vlan 50
(Netgear Switch) (Interface-vlan 50)#routing
(Netgear Switch) (Interface-vlan 50)#ip address 192.168.50.1 255.255.255.0
(Netgear Switch) (Interface-vlan 50)#exit
(Netgear Switch) (Config)#exit
```

```plaintext
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 200
(Netgear Switch) (Vlan)#vlan routing 200
(Netgear Switch) (Config)#interface 1/0/48
(Netgear Switch) (Interface 1/0/48)#vlan pvid 200
(Netgear Switch) (Interface 1/0/48)#vlan participation include 200
(Netgear Switch) (Interface 1/0/48)#exit
(Netgear Switch) #interface vlan 200
(Netgear Switch) (Interface-vlan 200)#routing
(Netgear Switch) (Interface-vlan 200)#ip address 192.168.200.2 255.255.255.0
(Netgear Switch) (Interface-vlan 200)#exit
```

5. Add two static routes so that the switch forwards the packets with destinations 192.168.100.0/24 and 192.168.30.0/24 to the correct next hops.

```plaintext
(Netgear Switch) (Config)#ip routing
(Netgear Switch) (Config)#ip route 192.168.100.0 255.255.255.0 192.168.200.1
(Netgear Switch) (Config)#ip route 192.168.30.0 255.255.255.0 192.168.200.1
```

**Web Interface: Configure One-Way Access Using a TCP Flag in an ACL**

This configuration consists of two steps:

- **Configure the Switch** on page 88
- **Configure the GSM7342S Switch** on page 96

**Configure the Switch**

   a. Select **Routing > VLAN > VLAN Routing Wizard**.
b. In the VLAN Routing Wizard, enter the following information:
   • In the Vlan ID field, enter 30.
   • In the IP Address field, enter 192.168.30.1.
   • In the Network Mask field, enter 255.255.255.0.

c. Click Unit 1. The ports display.

d. Click the gray box under port 35 twice until U displays.
   The U specifies that the egress packet is untagged for the port.

e. Click Apply to save VLAN 30.

2. Create VLAN 100 with IP address 192.168.100.1/24.
   a. Select Routing > VLAN > VLAN Routing Wizard.
      A screen similar to the following displays.
b. Enter the following information:
   • In the Vlan ID field, enter 100.
   • In the IP Address field, enter 192.168.100.1.
   • In the Network Mask field, enter 255.255.255.0.

c. Click Unit 1. The ports display.
d. Click the gray box under port 13 twice until U displays.
   The U specifies that the egress packet is untagged for the port.

e. Click Apply to save VLAN 100.

a. Select Routing > VLAN > VLAN Routing Wizard.
   A screen similar to the following displays.

   ![VLAN Routing Wizard](image)

   b. Enter the following information:
      • In the Vlan ID field, enter 200.
      • In the IP Address field, enter 192.168.200.1.
      • In the Network Mask field, enter 255.255.255.0.

c. Click Unit 1. The ports display.
d. Click the gray box under port 44 twice until U displays.
   The U specifies that the egress packet is untagged for the port.

e. Click Apply to save VLAN 200.

4. Enable IP routing.
a. Select Routing > IP > Basic > IP Configuration.
A screen similar to the following displays.

b. Under IP Configuration, make the following selections:
   • For Routing Mode, select the **Enable** radio button.
   • For IP Forwarding Mode, select the **Enable** radio button.

c. Click **Apply** to enable IP routing.

5. Add a static route with IP address 192.268.40.0/24:
   a. Select **Routing > Routing Table > Basic > Route Configuration**.

A screen similar to the following displays.

b. Under Configure Routes, make the following selection and enter the following information:
   • In the Route Type list, select **Static**.
   • In the **Network Address** field, enter **192.168.40.0**.
   • In the **Subnet Mask** field, enter **255.255.255.0**.
   • In the **Next Hop IP Address** field, enter **192.168.200.2**.

c. Click **Add**.

6. Create a static route with IP address 192.168.50.0/24:
   a. Select **Routing > Routing Table > Basic > Route Configuration**.
Under Configure Routes, make the following selection and enter the following information:

- In the **Route Type** list, select **Static**.
- In the **Network Address** field, enter **192.168.50.0**.
- In the **Subnet Mask** field, enter **255.255.255.0**.
- In the **Next Hop IP Address** field, enter **192.168.200.2**.

- Click **Add**.

**7. Create an ACL with ID 101.**

- Select **Security > ACL > Advanced > IP ACL**.

A screen similar to the following displays.

- In the IP ACL Table, in the **IP ACL ID** field, enter **101**.
- Click **Add**.

**8. Create an ACL with ID 102.**

- Select **Security > ACL > Advanced > IP ACL**.
A screen similar to the following displays.

b. In the IP ACL Table, in the IP ACL ID field, enter 102.
c. Click Add.

9. Add and configure an IP extended rule that is associated with ACL 101.
      A screen similar to the following displays.

      b. Under IP Extended Rules, in the ACL ID list, select 10.
c. Click Add.
d. Under Extended ACL Rule Configuration (100-199), enter the following information and make the following selections:
   • In the **Rule ID** field, enter 1.
   • For Action mode, select the **Deny** radio button.
   • In the **Match Every** field, select **False**.
   • In the **Protocol Type** list, select **TCP**.
   • For TCP Flag, in the **SYN** field, select **Set**, and in the **ACK** field, select **Clear**.

e. Click **Apply** to save the settings.

10. Add and configure an IP extended rule that is associated with ACL 102.
   a. Select **Security > ACL > Advanced > IP Extended Rules**.

   A screen similar to the following displays.

   ![Screen shot of IP Extended Rules configuration](image)

   b. Under IP Extended Rules, in the **ACL ID** list, select **102**.
   c. Click **Add**.
The Extended ACL Rule Configuration screen displays.

![Extended ACL Rule Configuration Screen](image)

**d.** Under Extended ACL Rule Configuration (100-199), enter the following information and make the following selections:

- In the **Rule ID** field, enter **1**.
- For **Action**, select the **Permit** radio button.
- In the **Match Every** field, select **False**.
- In the **Protocol Type** list, select **IP**.

**e.** Click **Apply** to save the settings.

**11.** Apply ACL 101 to port 44.

- Select **Security > ACL > Advanced > IP Binding Configuration**.

A screen similar to the following displays.

![IP Binding Configuration Screen](image)

**b.** Under **Binding Configuration**, specify the following:

- In the **ACL ID** list, select **101**.
- In the **Sequence Number** field, enter **1**.
c. Click **Unit 1**. The ports display.

d. Click the gray box under port **44**. A check mark displays in the box.

e. Click **Apply** to save the settings.

12. Apply ACL 102 to port 44.

a. Select **Security > ACL > Advanced > IP Binding Configuration**.

A screen similar to the following displays.

b. Under Binding Configuration, make the following selection and enter the following information:
   - In the **ACL ID** list, select **102**.
   - In the **Sequence Number** field, enter **2**.

c. Click **Unit 1**. The ports display.

d. Click the gray box under port **44**.

A check mark displays in the box.

e. Click **Apply** to save the settings.

**Configure the GSM7342S Switch**

a. Select **Routing > VLAN > VLAN Routing Wizard**.
b. Enter the following information:
   • In the Vlan ID field, enter 40.
   • In the IP Address field, enter 192.168.40.1.
   • In the Network Mask field, enter 255.255.255.0.

c. Click Unit 1. The ports display.

d. Click the gray box under port 24 twice until U displays.
   The U specifies that the egress packet is untagged for the port.

e. Click Apply to save VLAN 40.

2. Create VLAN 50 with IP address 192.168.50.1/24:
   a. Select Routing > VLAN > VLAN Routing Wizard.
      A screen similar to the following displays.

      b. Enter the following information:
         • In the Vlan ID field, enter 50.
         • In the IP Address field, enter 192.168.50.1.
         • In the Network Mask field, enter 255.255.255.0.

c. Click Unit 1. The ports display.
d. Click the gray box under port 25 twice until U displays.
   The U specifies that the egress packet is untagged for the port.

e. Click **Apply** to save VLAN 50.

   a. Select **Routing > VLAN > VLAN Routing Wizard**.
      A screen similar to the following displays.

   ![VLAN Routing Wizard]

   b. Enter the following information:
      - In the **Vlan ID** field, enter **200**.
      - In the **IP Address** field, enter **192.168.200.2**.
      - In the **Network Mask** field, enter **255.255.255.0**.
   
   c. Click **Unit 1**. The ports display.
   
   d. Click the gray box under port 48 twice until U displays.
      The U specifies that the egress packet is untagged for the port.

   e. Click **Apply** to save VLAN 200.

4. Create a static route with IP address 192.168.100.0/24:
   a. Select **Routing > Routing Table > Basic > Route Configuration**.
A screen similar to the following displays.

b. Under Configure Routes, make the following selections and enter the following information:
   • Select **Static** in the **Route Type** field.
   • In the **Network Address** field, enter **192.168.100.0**.
   • In the **Subnet Mask** field, enter **255.255.255.0**.
   • In the **Next Hop IP Address** field, enter **192.168.200.1**.

c. Click **Add**.

5. Create a static route with IP address 192.168.30.0/24:
   a. Select **Routing > Routing Table > Basic > Route Configuration**.

   A screen similar to the following displays.

b. Under Configure Routes, make the following selection and enter the following information:
   • In the **Route Type** field, select **Static**.
   • In the **Network Address** field, enter **192.168.30.0**.
   • In the **Subnet Mask** field, enter **255.255.255.0**.
   • In the **Next Hop IP Address** field, enter **192.168.200.1**.

c. Click **Add**.
Use ACLs to Configure Isolated VLANs on a Layer 3 Switch

This example shows how to isolate VLANs on a Layer 3 switch by using ACLs. In this example, PC 1 is in VLAN 24, PC 2 is in VLAN 48, and the server is in VLAN 38. PC 1 and PC 2 are isolated by an ACL but can both access the server. The example is shown as CLI commands and as a Web interface procedure.

![Diagram of network setup]

Figure 11. Using ACLs to isolate VLANs on a Layer 3 switch
CLI: Configure One-Way Access Using a TCP Flag in ACL Commands

1. Enter the following CLI commands.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 24
(Netgear Switch) (Vlan)#vlan routing 24
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 1/0/24
(Netgear Switch) (Interface 1/0/24)#vlan participation include 24
(Netgear Switch) (Interface 1/0/24)#vlan pvid 24
(Netgear Switch) (Interface 1/0/24)#exit

(Netgear Switch) (Config)#interface vlan 24
(Netgear Switch) (Interface-vlan 24)#routing
(Netgear Switch) (Interface-vlan 24)#ip address 192.168.24.1 255.255.255.0
(Netgear Switch) (Interface-vlan 24)#exit
(Netgear Switch) (Config)#exit
```

2. Create VLAN 48, add port 1/0/48 to it, and assign IP address 192.168.48.1 to it.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 48

(Netgear Switch) (Interface 1/0/48)#exit
```

**Web Interface: Configure One-Way Access Using a TCP Flag in an ACL**

   a. Select **Routing > VLAN > VLAN Routing Wizard**.
      A screen similar to the following displays.

      ![VLAN Routing Wizard Screen](image)

   b. Enter the following information:
      • In the **Vlan ID** field, enter **24**.
      • In the **IP Address** field, enter **192.168.24.1**.
      • In the **Network Mask** field, enter **255.255.255.0**.
   c. Click **Unit 1**. The ports display.
   d. Click the gray box under port **24** twice until **U** displays.
      The U specifies that the egress packet is untagged for the port.
   e. Click **Apply** to save VLAN 24.

2. Create VLAN 48 with IP address 192.168.48.1.
ProSAFE M4100 Managed Switches

3. Create VLAN 38 with IP address 10.100.5.34.
   a. Select Routing > VLAN > VLAN Routing Wizard.
      A screen similar to the following displays.

      b. Enter the following information in the VLAN Routing Wizard:
         • In the Vlan ID field, enter 38.
         • In the IP Address field, enter 10.100.5.34.
• In the **Network Mask** field, enter **255.255.255.0**.

c. Click **Unit 1**. The ports display.

d. Click the gray box under port **38** twice until **U** displays.

   The U specifies that the egress packet is untagged for the port.

e. Click **Apply** to save VLAN 38.

4. **Enable IP routing:**

   a. Select **Routing > IP > Basic > IP Configuration**.

      A screen similar to the following displays.

      ![IP Configuration Screen](image)

   b. Under IP Configuration, make the following selections:

      • For **Routing Mode**, select the **Enable** radio button.

      • For **IP Forwarding Mode**, select the **Enable** radio button.

   c. Click **Apply** to enable IP routing.

5. Create an ACL with ID **101**.

   a. Select **Security > ACL > Advanced > IP ACL**.

      A screen similar to the following displays.

      ![IP ACL Screen](image)

   b. In the **IP ACL Table**, in the **IP ACL ID** field, enter **101**.

   c. Click **Add**.

6. Create an ACL with ID **102**.

   a. Select **Security > ACL > Advanced > IP ACL**.
A screen similar to the following displays.

b. In the IP ACL Table, in the IP ACL ID field, enter 102.
c. Click Add.

7. Create an ACL with ID 103.
   a. Select Security > ACL > Advanced > IP ACL.

   A screen similar to the following displays.

   b. In the IP ACL ID field of the IP ACL Table, enter 103.
   c. Click Add.

8. Add and configure an IP extended rule that is associated with ACL 101:
A screen similar to the following displays.

b. Under IP Extended Rules, in the **ACL ID** field, select **101**.
c. Click **Add**. The Extended ACL Rule Configuration screen displays.

d. Under Extended ACL Rule Configuration (100-199), enter the following information and make the following selections:
   - In the **Rule ID** field, enter **1**.
   - For Action, select the **Deny** radio button.
   - In the **Match Every** field, select **False**.
   - In the **Destination IP Address** field, enter **192.168.24.0**.
   - In the **Destination IP Mask** field, enter **0.0.0.255**.
e. Click **Apply** to save the settings.

9. Add and configure an IP extended rule that is associated with ACL 102.
   a. Select **Security > ACL > Advanced > IP Extended Rules**.
A screen similar to the following displays.

b. Under IP Extended Rules, in the ACL ID field, select 102.

c. Click Add. The Extended ACL Rule Configuration screen displays.

d. Under Extended ACL Rule Configuration (100-199), enter the following information and make the following selections:
   - In the Rule ID field, enter 1.
   - For Action mode, select the Deny radio button.
   - In the Match Every field, select False.
   - In the Destination IP Address field, enter 192.168.48.0.
   - In the Destination IP Mask field, enter 0.0.0.255.

e. Click Apply to save the settings.

10. Add and configure an IP extended rule that is associated with ACL 103:
A screen similar to the following displays.

b. Under IP Extended Rules, in the **ACL ID** field, select 103.

c. Click **Add**. The Extended ACL Rule Configuration screen displays.

d. Under Extended ACL Rule Configuration (100-199), enter the following information and make the following selections:
   - In the **Rule ID** field, enter 1.
   - For Action mode, select the **Permit** radio button.
   - In the **Match Every** field, select **False**.
   - In the **Protocol Type** field, select **IP**.

e. Click **Apply** to save the settings.

11. Apply ACL 102 to port 24:

   a. Select **Security > ACL > Advanced > IP Binding Configuration**.
b. Under Binding Configuration, make the following selection and enter the following information:
   • In the **ACL ID** field, select **102**.
   • In the **Sequence Number** field, enter **1**.

c. Click **Unit 1**. The ports display.

d. Click the gray box under port **24**.
   A check mark displays in the box.

e. Click **Apply** to save the settings.

12. Apply ACL 101 to port 48:
   a. Select **Security > ACL > Advanced > IP Binding Configuration**.

A screen similar to the following displays.
b. Under Binding Configuration, make the following selection and enter the following information:
   • In the **ACL ID** field, select **101**.
   • In the **Sequence Number** field, enter **1**.

c. Click **Unit 1**. The ports display.

d. Click the gray box under port **48**.
   A check mark displays in the box.

e. Click **Apply** to save the settings.

13. Apply ACL 103 to port 24 and port 48:
   a. Select **Security > ACL > Advanced > IP Binding Configuration**.
      A screen similar to the following displays.

      ![IP Binding Configuration Screen](image)

      b. Under Binding Configuration, make the following selection and enter the following information:
         • In the **ACL ID** field, select **103**.
         • In the **Sequence Number** field, enter **2**.

c. Click **Unit 1**. The ports display.
   Configure the following ports:
   • Click the gray box under port **24**. A check mark displays in the box.
   • Click the gray box under port **48**. A check mark displays in the box.

d. Click **Apply** to save the settings.
Set up a MAC ACL with Two Rules

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Set up a MAC ACL with Two Rules**

1. Create a new MAC ACL acl_bpdu.

   ```
   (Netgear Switch) #
   (Netgear Switch) #config
   (Netgear Switch) (Config)#mac access-list extended acl_bpdu
   ```

2. Deny all the traffic that has destination MAC 01:80:c2:xx:xx:xx.

   ```
   (Netgear Switch) (Config-mac-access-list)#deny any 01:80:c2:00:00:00 00:00:00:ff:ff:ff
   ```

3. Permit all the other traffic.

   ```
   (Netgear Switch) (Config-mac-access-list)#permit any
   (Netgear Switch) (Config-mac-access-list)#exit
   ```

4. Apply the MAC ACL acl_bpdu to port 1/0/2.

   ```
   (Netgear Switch) (Config)#interface 1/0/2
   (Netgear Switch) (Interface 1/0/2)#mac access-group acl_bpdu in
   ```

**Web Interface: Set up a MAC ACL with Two Rules**

1. Create MAC ACL 101 on the switch.
   a. Select Security > ACL > MAC ACL.
A screen similar to the following displays.

b. In the **Name** field, enter `acl_bpdu`.

c. Click **Add** to create ACL `acl_bpdu`.

2. Create a new rule associated with the ACL `acl_bpdu`.

   a. Select **Security > ACL > MAC ACL > MAC Rules**.

   A screen similar to the following displays.

   a. In the **ACL Name** field, select `acl_bpdu`.

   b. In the **Action** field, select **Deny**.

   c. Enter the following information in the Rule Table.

      • In the **ID** field, enter 1.
      • In the **Destination MAC** field, enter `01:80:c2:00:00:00`.
      • In the **Destination MAC Mask** field, enter `00:00:00:ff:ff:ff`.

   d. Click the **Add** button.

3. Create another rule associated with the ACL `acl_bpdu`.

   a. Select **Security > ACL > MAC ACL > MAC Rules**.
A screen similar to the following displays.

![Image of ACL setup](attachment:image)

a. Select `acl_bpdu` in the **ACL Name** field.
b. Enter the following information in the **Rule Table**.
   - In the **ID** field, enter **2**.
   - In the **Action** field, select the **Permit**.
c. Click the **Add** button.

4. Apply the ACL acl_bpdu to port 2.
   a. Select **Security > ACL > MAC ACL > MAC Binding Configuration**.
      A screen similar to the following displays.
      ![Image of MAC Binding Configuration](attachment:image)
   b. Enter the following information in the **MAC Binding Configuration**.
      - In the **ACL ID** field, select `acl_bpdu`.
      - In the **Sequence Number** field, enter **1**.
   c. Click the **Unit 1**. The ports display.
   d. Click the gray box under port **2**. A check mark displays in the box.
   e. Click **Apply** to save the settings.
ACLs

ProSAFE M4100 Managed Switches

ACL Mirroring

This feature extends the existing port mirroring functionality by allowing you to mirror a designated traffic stream in an interface using ACL rules. Define an ACL rule matching the desired traffic with the option mirror to an interface. Any traffic matching this rule will be copied to the specified mirrored interface.

Figure 12. ACL mirroring

CLI: Configure ACL Mirroring

The script in this section shows how to mirror the traffic stream received from a host in an interface. These examples mirror the traffic from the host 10.0.0.1 connected to the interface 1/0/1.

1. Create an IP access control list with the name monitorHost.

```
(Netgear Switch) (Config)# ip access-list monitorHost
```
2. Define the rules to match host 10.0.0.1 and to permit all others.

```
(Netgear Switch) (Config-ipv4-acl)# permit ip 10.0.0.1 0.0.0.0 any mirror 1/0/19
(Netgear Switch) (Config-ipv4-acl)# permit every
```

3. Bind the ACL with interface 1/0/1.

```
(Netgear Switch) (Interface 1/0/1)#ip access-group monitorHost in 1
```

4. View the configuration.

```
(Netgear Switch) # show ip access-lists
Current number of ACLs: 1  Maximum number of ACLs: 100

<table>
<thead>
<tr>
<th>ACL ID/Name</th>
<th>Rules</th>
<th>Direction</th>
<th>Interface(s)</th>
<th>VLAN(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>monitorHost</td>
<td>2</td>
<td>inbound</td>
<td>1/0/1</td>
<td></td>
</tr>
</tbody>
</table>

(Netgear Switch) #show ip access-lists monitorHost

ACL Name: monitorHost
Inbound Interface(s): 1/0/1

Rule Number: 1
  Action......................................... permit
  Match All...................................... FALSE
  Protocol....................................... 255(ip)
  Source IP Address.............................. 10.0.0.1
  Source IP Mask................................. 0.0.0.0
  Mirror Interface............................... 1/0/19

Rule Number: 2
  Action......................................... permit
  Match All...................................... TRUE
```
Web Interface: Configure ACL Mirroring

1. Create an IP access control list with the name monitorHost on the switch.
   a. Select Security > ACL > Advanced > IP ACL.
      A screen similar to the following displays.

      ![IP ACL Configuration](image1)

      b. In the IP ACL ID field, enter monitorHost.
      c. Click Add to create ACL monitorHost, and the following screen displays:

      ![IP ACL Table](image2)

2. Create a rule to match host 10.0.0.1 in the ACL monitorHost.
      A screen similar to the following displays.

      ![Extended ACL Rules](image3)
b. Click Add, and the Extended ACL Rule Configuration screen displays.

![Extended ACL Rule Configuration](image)

c. In the Rule ID field, enter 1.
d. For Action, select the Permit radio button.
e. In the Mirror Interface list, select 1/0/19.
f. In the Src IP Address field, enter 10.0.0.1.
g. In the Src IP Mask field, enter 0.0.0.0.
h. Click Apply.

3. Create a rule to match every other traffic.

   A screen similar to the following displays.

![IP Extended Rules](image)
b. Click **Add**, and a screen similar to the following displays.

![Extended ACL Rule Configuration](image)

- In the **Rule ID** field, enter **2**.
- Select the **Permit** radio button.
- In the **Match Every** field, select **True**.
- Click **Apply**.

At the end of this configuration a screen similar to the following displays.

![Extended ACL Rule Table](image)

4. Bind the ACL with interface 1/0/1.
   a. Select **Security > ACL > Advanced > IP Binding Configuration**.
      A screen similar to the following displays.

![IP Binding Configuration](image)

- In the **Sequence Number** field, enter **1**.
- In the Port Selection Table, click **Unit 1** to display all the ports for the device.
- Select the **Port 1** check box.
- Click **Apply**.
A screen similar to the following displays.

ACL Redirection

This feature redirects a specified traffic stream to a specified interface.

Figure 13. ACL Redirect

CLI: Redirect a Traffic Stream

The script in this section shows how to redirect an HTTP traffic stream received in an interface to the specified interface. This example redirects the HTTP traffic stream received in port 1/0/1 to port 1/0/19.
1. Create an IP access control list with the name redirectHTTP.

   `Netgear Switch` (Config)#ip access-list redirectHTTP

2. Define a rule to match the HTTP stream and define a rule to permit all others.

   
   `Netgear Switch` (Config-ipv4-acl)# permit tcp any any eq http redirect 1/0/19
   `Netgear Switch` (Config-ipv4-acl)# permit every

3. Bind the ACL with interface 1/0/1.

   
   `Netgear Switch` (Interface 1/0/1)#ip access-group redirectHTTP in 1

4. View the configuration.

   
   `Netgear Switch` # show ip access-lists
   Current number of ACLs: 1 Maximum number of ACLs: 100

   ACL ID/Name   Rules Direction Interface(s)       VLAN(s)
   -------------------------  -----   ----------   -------------------  ------------
   redirectHTTP         2      inbound     1/0/1          

   `Netgear Switch` #show ip access-lists redirectHTTP

   ACL Name: redirectHTTP
   Inbound Interface(s): 1/0/1

   Rule Number: 1
   Action......................................... permit
   Match All...................................... FALSE
   Protocol....................................... 6(tcp)
   Destination L4 Port Keyword............... 80(www/http)
   Redirect Interface.......................... 1/0/19

   Rule Number: 2
   Action......................................... permit
   Match All...................................... TRUE
Web Interface: Redirect a Traffic Stream

This example redirects the HTTP traffic stream received in port 1/0/1 to port 1/0/19.

1. Create an IP access control list with the name redirectHTTP.
   a. Select Security > ACL > Advanced > IP ACL.
      A screen similar to the following displays.
      
      b. In the IP ACL field, enter redirectHTTP.
      c. Click Add to create the IP ACL redirectHTTP.
      A screen similar to the following displays.

2. Create a rule to redirect HTTP traffic.
      A screen similar to the following displays.
b. Click **Add**, and the Extended ACL Rule Configuration screen displays.

c. In the **Rule ID** field, enter 1.
d. For Action, select the **Permit** radio button.
e. In the **Redirect Interface** list, select 1/0/19.
f. In the **Dst L4 Port** list, select **http**.
g. Click **Apply**. The Extended ACL Rules screen displays, as described in the next step in this procedure.

3. Create a rule to match every other traffic.
   
a. Select **Security > ACL > Advanced > IP Extended Rules**.

   A screen similar to the following displays.
b. Click **Add**, and the Extended ACL Rule Configuration screen displays.

![Extended ACL Rule Configuration Screen](image)

4. **Bind the ACL with interface 1/0/1.**
   a. Select **Security > ACL > Advanced > IP Binding Configuration.**
      A screen similar to the following displays.

      ![IP Binding Configuration Screen](image)

      b. In the **Sequence Number** field, enter **1**.
c. In the Port Selection Table, click **Unit 1** to display all the ports.

d. Select the check box below Port 1.

e. Click **Apply**.

At the end of this configuration a screen similar to the following displays.

![Netgear interface configuration](image)

**Configure IPv6 ACLs**

This feature extends the existing IPv4 ACL by providing support for IPv6 packet classification. Each ACL is a set of up to 12 rules applied to inbound traffic. Each rule specifies whether the contents of a given field should be used to permit or deny access to the network, and can apply to one or more of the following fields within a packet:

- Source IPv6 prefix
- Destination IPv6 prefix
- Protocol number
- Source Layer 4 port
- Destination Layer 4 port
- DSCP value
- Flow label

Note that the order of the rules is important: When a packet matches multiple rules, the first rule takes precedence. Also, once you define an ACL for a given port, all traffic not specifically permitted by the ACL is denied access.
The script in this section shows you how to set up an IPv6 ACL with the following three rules:

- **Rule-1.** Permits every traffic to the destination network 2001:DB8:C0AB:AC14::/64.
- **Rule-2.** Permits IPv6 TELNET traffic to the destination network 2001:DB8:C0AB:AC13::/64.
- **Rule-3.** Permits IPv6 HTTP traffic to any destination.

### CLI: Configure an IPv6 ACL

1. Create the access control list with the name ipv6-acl.

   ```
   (Netgear Switch) (Config)# ipv6 access-list ipv6-acl
   ```

2. Define three rules to:
   - Permit *any* IPv6 traffic to the destination network 2001:DB8:C0AB:AC14::/64 from the source network 2001:DB8:C0AB:AC11::/64.
   - Permit IPv6 Telnet traffic to the destination network 2001:DB8:C0AB:AC13::/64 from the source network 2001:DB8:C0AB:AC11::/64.
• Permit IPv6 HTTP traffic to any destination network from the source network 2001:DB8:C0AB:AC11::/64.

(Netgear Switch) (Config-ipv6-acl)# permit ipv6 2001:DB8:C0AB:AC11::/64
(Netgear Switch) (Config-ipv6-acl)# permit ipv6 2001:DB8:C0AB:AC14::/64
(Netgear Switch) (Config-ipv6-acl)# permit tcp 2001:DB8:C0AB:AC11::/64
2001:DB8:C0AB:AC13::/64 eq telnet
(Netgear Switch) (Config-ipv6-acl)# permit tcp 2001:DB8:C0AB:AC11::/64 any eq http

3. Apply the rules to inbound traffic on port 1/0/1. Only traffic matching the criteria will be accepted.

(Netgear Switch) (Config)#interface 1/0/1
(Netgear Switch) (Interface 1/0/1)# ipv6 traffic-filter ipv6-acl in
(Netgear Switch) (Interface 1/0/1)# exit
(Netgear Switch) (Config)#exit

4. View the configuration.

(Netgear Switch) #show ipv6 access-lists
Current number of all ACLs: 1  Maximum number of all ACLs: 100
IPv6 ACL Name          Rules   Direction     Interface(s)     VLAN(s)
---------------------  -----  ---------     -------------   -------------------
ipv6-acl             3     inbound        1/0/1

(Netgear Switch) #show ipv6 access-lists ipv6-acl

ACL Name: ipv6-acl
Inbound Interface(s): 1/0/1

Rule Number: 1
Action......................................... permit
Protocol................................. 255(ipv6)
Source IP Address.......................... 2001:DB8:C0AB:AC11::/64
Destination IP Address...................... 2001:DB8:C0AB:AC13::/64

Rule Number: 2
Action......................................... permit
Protocol................................. 6(tcp)
Source IP Address.......................... 2001:DB8:C0AB:AC11::/64
Destination IP Address...................... 2001:DB8:C0AB:AC13::/64
Destination L4 Port Keyword............... 23(telnet)
Rule Number: 3
Action.............................................. permit
Protocol.............................................. 6(tcp)
Source IP Address.............................. 2001:DB8:C0AB:AC11::/64
Destination L4 Port Keyword.................. 80(www/http)

Web Interface: Configure an IPv6 ACL

1. Create the access control list with the name ipv6-acl
   a. Select Security > ACL > Advanced > IPv6 ACL.
   b. In the IPv6 ACL Table, in the IPv6 ACL field, enter ipv6-acl.

   A screen similar to the following displays.

   ![IPv6 ACL Table](image1)

   c. Click Add. A screen similar to the following displays.

   ![IPv6 ACL Table](image2)

2. Define the first rule (1 of 3).

   A screen similar to the following displays.

   ![IPv6 Rules](image3)
b. In the **ACL Name** list, select `ipv6-acl`.

c. Click **Add**.

d. In the **Rule ID** field, enter 1.

e. For Action, select the **Permit** radio button.

f. In the **Source Prefix** field, enter `2001:DB8:C0AB:AC11::`.

g. In the **Source Prefix Length** field, enter 64.

h. In the **Destination Prefix** field, enter `2001:DB8:C0AB:AC14::`.

i. In the **Destination Prefix Length** field, enter 64.

   A screen similar to the following displays.

   ![IPv6 ACL Rule Configuration](image)

j. Click **Apply**.

3. **Add Rule 2.**

   a. In the **Rule ID** field, enter 2.

   b. For Action, select the **Permit** radio button.

   c. In the **Protocol Type** list, select **TCP**.

   d. In the **Source Prefix** field, enter `2001:DB8:C0AB:AC11::`.

   e. In the **Source Prefix Length** field, enter 64.

   f. In the **Destination Prefix** field, enter `2001:DB8:C0AB:AC13::`.

   g. In the **Destination Prefix Length** field, enter 64.

   h. In the **Destination L4 Port** list, select **telnet**.
A screen similar to the following displays.

![IPv6 ACL Rule Configuration](image)

   a. In the **Rule ID** field, enter 3.
   b. For Action, select the **Permit** radio button.
   c. In the **Protocol Type** list, select **TCP**.
   d. In the **Source Prefix** field, enter `2001:DB8:C0AB:AC11::`
   e. In the **Source Prefix Length** field, enter **64**.
   f. In the **Destination L4 Port** list, select **http**.

A screen similar to the following displays.

![IPv6 ACL Rule Configuration](image)

g. Click **Apply**.

5. Apply the rules to inbound traffic on port 1/0/1.

   Only traffic matching the criteria will be accepted.
   a. Select **Security > ACL > Advanced > IP Binding Configuration**.
b. In the **ACL ID** list, select *ipv6-acl*.
c. In the **Sequence Number** list, select 1.
d. Click **Unit 1**.
e. Select Port 1.

A screen similar to the following displays.

![IP Binding Configuration](image1)

f. Click **Apply**.

A screen similar to the following displays.

![IP Binding Configuration](image2)

6. View the binding table.

Select **Security > ACL > Advanced > Binding Table**.

CoS Queuing

Class of Service Queuing

This chapter includes the following sections:

• QoS Queuing Concepts
• Show classofservice Trust
• Set classofservice Trust Mode
• Show classofservice IP-Precedence Mapping
• Configure Cos-queue Min-bandwidth and Strict Priority Scheduler Mode
• Set CoS Trust Mode for an Interface
• Configure Traffic Shaping
QoS Queuing Concepts

This chapter describes Class of Service (CoS) queue mapping, CoS Configuration, and traffic shaping features. Each port has one or more queues for packet transmission. During configuration, you can determine the mapping and configuration of these queues.

Based on the service rate and other criteria you configure, queues provide preference to specified packets. If a delay is necessary, the system holds packets until the scheduler authorizes transmission. As queues become full, packets are dropped. Packet drop precedence indicates the packet’s sensitivity to being dropped during queue congestion.

Select per interface configuration scheme:

You can configure CoS mapping, queue parameters, and queue management are configurable per interface.

Queue management is configurable per interface.

Some hardware implementations allow queue depth management using tail dropping or weighted random early discard (WRED).

The operation of CoS queuing involves queue mapping and queue configuration.

CoS Queue Mapping

CoS queue mapping uses trusted and untrusted ports.

**Trusted Ports**

- The system takes at face value certain priority designations for arriving packets.
- Trust applies only to packets that have that trust information.
- There can be only one trust field at a time - per port.
  - 802.1p user priority (This is the default trust mode and is managed through switching configuration.)
  - IP precedence
  - IP DiffServ Code Point (DSCP)

The system can assign the service level based upon the 802.1p priority field of the L2 header. You configure this by mapping the 802.1p priorities to one of three traffic class queues. These queues are:

- **Queue 2.** Minimum of 50 percent of available bandwidth
- **Queue 1.** Minimum of 33 percent of available bandwidth
- **Queue 0.** Lowest priority, minimum of 17 percent of available bandwidth

For untagged traffic, you can specify the default 802.1p priority on a per-port basis.
Untrusted Ports

- No incoming packet priority designation is trusted; therefore, the default priority value for the port is used.
- All ingress packets from untrusted ports, where the packet is classified by an ACL or a DiffServ policy, are directed to specific CoS queues on the appropriate egress port. That specific CoS queue is determined by either the default priority of the port or a DiffServ or ACL-assigned queue attribute.
- Used when trusted port mapping is unable to be honored - for instance, when a non-IP DSCP packet arrives at a port configured to trust IP DSCP.

CoS Queue Configuration

CoS queue configuration involves port egress queue configuration and drop precedence configuration (per queue). The design of these on a per-queue, per-drop precedence basis allows you to create the service characteristics that you want for different types of traffic.

Port egress queue configuration:
- Scheduler type, strict vs. weighted
- Minimum guaranteed bandwidth
- Maximum allowed bandwidth per-queue shaping
- Queue management type, tail drop vs. WRED

Drop precedence configuration (per queue):
- WRED parameters
  - Minimum threshold
  - Maximum threshold
  - Drop probability
  - Scale factor
- Tail drop parameters, threshold

Per-interface basis:
- Queue management type, rail Drop vs. WRED

Only if per-queue configuration is not supported:
- WRED decay exponent
- Traffic shaping for an entire interface
Show classofservice Trust

The example is shown as CLI commands and as a Web interface procedure.

CLI: Show classofservice Trust

To use the CLI to show CoS trust mode, use these commands:

```
(Netgear Switch) #show classofservice trust?
<cr>   Press Enter to execute the command.
(Netgear Switch) #show classofservice trust
Class of Service Trust Mode: Dot1P
```

Web Interface: Show classofservice Trust

Select QoS > CoS > Basic > CoS Configuration. A screen similar to the following displays.

Set classofservice Trust Mode

The example is shown as CLI commands and as a Web interface procedure.

CLI: Set classofservice Trust Mode

```
(Netgear Switch) (Config)#classofservice?
dot1p-mapping            Configure dot1p priority mapping.
ip-dscp-mapping          Maps an IP DSCP value to an internal traffic class.
trust                    Sets the Class of Service Trust Mode of an Interface.
(Netgear Switch) (Config)#classofservice trust?
dot1p                    Sets the Class of Service Trust Mode of an Interface
to 802.1p.
ip-dscp                  Sets the Class of Service Trust Mode of an Interface
to IP DSCP.
(Netgear Switch) (Config)#classofservice trust dot1p?
<cr>   Press Enter to execute the command.
(Netgear Switch) (Config)#classofservice trust dot1p
```
Web Interface: Set classofservice Trust Mode

   A screen similar to the following displays.

   ![Web Interface: CoS Configuration](image)

2. Select the Global radio button.
3. In the Global Trust Mode list, select trust dot1p.
4. Click Apply to save the settings.

Show classofservice IP-Precedence Mapping

The example is shown as CLI commands and as a Web interface procedure.

CLI: Show classofservice IP-Precedence Mapping

```
(Netgear Switch) #show classofservice ip-precedence-mapping
IP Precedence | Traffic Class |
---------------|--------------|
       0        |     1        |
       1        |     0        |
       2        |     0        |
       3        |     1        |
       4        |     2        |
       5        |     2        |
       6        |     3        |
       7        |     3        |
```

Web Interface: Show classofservice ip-precedence Mapping

A screen similar to the following displays.

2. In the Interface list, select **All**.
   The global IP precedence to queue mapping is displayed.

3. In the **Interface** list, select the specific interface (such as **1/0/1**).
   The IP precedence to queue mapping of the interface is displayed.

**Configure Cos-queue Min-bandwidth and Strict Priority Scheduler Mode**

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Cos-queue Min-bandwidth and Strict Priority Scheduler Mode**

```
(Netgear Switch) (Config)#cos-queue min-bandwidth?
<bw-0> Enter the minimum bandwidth percentage for Queue 0.
(Netgear Switch) (Config)#cos-queue min-bandwidth 15
Incorrect input! Use 'cos-queue min-bandwidth <bw-0>..<bw-7>.
(Netgear Switch) (Config)#cos-queue min-bandwidth 15 25 10 5 5 20 10 10
(Netgear Switch) (Config)#cos-queue strict?
<queue-id> Enter a Queue Id from 0 to 7.
(Netgear Switch) (Config)#cos-queue strict 1?
<cr> Press Enter to execute the command.
<queue-id> Enter an additional Queue Id from 0 to 7.
(Netgear Switch) (Config)#cos-queue strict 1
```
Web Interface: Configure CoS-queue Min-bandwidth and Strict Priority Scheduler Mode

1. For Interface 1/0/2, set the minimum bandwidth to 15 for queue 0.
      A screen similar to the following displays.

   b. In the Queue ID list, select 0.
   c. Under Interface Queue Configuration, scroll down and select the interface 1/0/2 check box.
      Now 1/0/2 appears in the Interface field at the top.
   d. Enter the following information:
      • In the Minimum Bandwidth field, enter 15.
      • In the Scheduler Type list, select Weighted.
   e. Click Apply to save the settings.

2. For interface 1/0/2, set the minimum bandwidth 25 for queue 1, and set the scheduler type to strict.
A screen similar to the following displays.

![Interface Queue Configuration](image)

b. In the **Queue ID** list, select 1.

c. Under Interface Queue Configuration, scroll down and select the interface **1/0/2** check box.

Now 1/0/2 appears in the Interface field at the top.

d. Enter the following information:
   - In the **Minimum Bandwidth** field, enter 25.
   - In the **Scheduler Type** list, select **Strict**.

e. Click **Apply** to save the settings.

### Set CoS Trust Mode for an Interface

The example is shown as CLI commands and as a Web interface procedure.

#### CLI: Set CoS Trust Mode for an Interface

```
(Netgear Switch) (Interface 1/0/3)#classofservice trust?
dot1p                   Sets the Class of Service Trust Mode of an Interface
to 802.1p.
ip-dscp                 Sets the Class of Service Trust Mode of an Interface
to IP DSCP.
(Netgear Switch) (Interface 1/0/3)#classofservice trust dot1p?
<cr>                     Press Enter to execute the command.
(Netgear Switch) (Interface 1/0/3)#classofservice trust dot1p
```

---

**CoS Queuing**

139
**Note:** The traffic class value range is 0—6 instead of 0—7 because queue 7 is reserved in a stacking build for stack control, and therefore you cannot configure it.

### Web Interface: Set CoS Trust Mode for an Interface

1. Select **QoS > CoS > Advanced > CoS Configuration**.

   A screen similar to the following displays.

   ![CoS Configuration Screen](image)

2. Under CoS Configuration, select the **Interface** radio button.

3. In the **Interface** list, select **1/0/3**.

4. In the **Interface Trust Mode** list, select **trust dot1p**.

5. Click **Apply** to save the settings.

### Configure Traffic Shaping

Traffic shaping controls the amount and volume of traffic transmitted through a network. This has the effect of smoothing temporary traffic bursts over time. Use the traffic-shape command to enable traffic shaping by specifying the maximum transmission bandwidth limit for all interfaces (Global Config) or for a single interface (Interface Config).

The `<bw>` value is a percentage that ranges from 0 to 100 in increments of 5. The default bandwidth value is 0, meaning no upper limit is enforced, which allows the interface to transmit up to its maximum line rate.

The bw value is independent of any per-queue maximum bandwidth values in effect for the interface and should be considered as a second-level transmission rate control mechanism that regulates the output of the entire interface regardless of which queues originate the outbound traffic.
**CLI: Configure traffic-shape**

```
(Netgear Switch) (Config)#traffic-shape?
<bw>                     Enter the shaping bandwidth percentage from 0 to 100
                        in increments of 5.
(Netgear Switch) (Config)#traffic-shape 70?
<cr>                     Press Enter to execute the command.
(Netgear Switch) (Config)#traffic-shape 70
(Netgear Switch) (Config)#
```

**Web Interface: Configure Traffic Shaping**

1. Set the shaping bandwidth percentage to 70 percent.
   a. Select **QoS > CoS > Advanced > CoS Interface Configuration**.
      A screen similar to the following displays.

   ![CoS Interface Configuration](image)

   b. Under CoS Interface Configuration, scroll down and select the interface 1/0/3 check box.
      Now 1/0/3 appears in the Interface field at the top.

   c. In the **Interface Shaping Rate (0 to 100)** field, enter **70**.

   d. Click **Apply** to save the settings.
DiffServ

Differentiated Services

This chapter includes the following sections:

- DiffServ Concepts
- Configure DiffServ
- DiffServ for VoIP
- Auto VoIP
- DiffServ for IPv6
- Color Conform Policy
DiffServ Concepts

Differentiated services (DiffServ) is one technique for implementing Quality of Service (QoS) policies. Using DiffServ in your network allows you to directly configure the relevant parameters on the switches and routers rather than using a resource reservation protocol. This section explains how to configure the ProSAFE M4100 Managed Switches to identify which traffic class a packet belongs to, and how it should be handled to provide the quality of service you want. As implemented on the M4100 Managed Switch, DiffServ allows you to control what traffic is accepted and what traffic is discarded.

How you configure DiffServ support on a M4100 Managed Switch varies depending on the role of the switch in your network:

• **Edge device**. An edge device handles ingress traffic, flowing toward the core of the network, and egress traffic, flowing away from the core. An edge device segregates inbound traffic into a small set of traffic classes, and is responsible for determining a packet’s classification. Classification is based primarily on the contents of the Layer 3 and Layer 4 headers, and is recorded in the Differentiated Services Code Point (DSCP) added to a packet’s IP header.

• **Interior node**. A switch in the core of the network is responsible for forwarding packets, rather than for classifying them. It decodes the DSCP code point in an incoming packet, and provides buffering and forwarding services using the appropriate queue management algorithms.

Before configuring DiffServ on a particular M4100 Managed Switch, you must determine the QoS requirements for the network as a whole. The requirements are expressed in terms of rules, which are used to classify inbound traffic on a particular interface. The switch software does not support DiffServ in the outbound direction.

Rules are defined in terms of classes, policies, and services:

• **Class**. A class consists of a set of rules that identify which packets belong to the class. Inbound traffic is separated into traffic classes based on Layer 3 and Layer 4 header data and the VLAN ID, and marked with a corresponding DSCP value. One type of class is supported: All, which specifies that every match criterion defined for the class must be true for a match to occur.

• **Policy**. Defines the QoS attributes for one or more traffic classes. An example of an attribute is the ability to mark a packet at ingress. The 7000 Series Managed Switch supports a traffic conditions policy. This type of policy is associated with an inbound traffic class and specifies the actions to be performed on packets meeting the class rules:
  - Marking the packet with a given DSCP code point, IP precedence, or CoS
  - Policing packets by dropping or re-marking those that exceed the class’s assigned data rate
  - Counting the traffic within the class

• **Service**. Assigns a policy to an interface for inbound traffic.
**Configure DiffServ**

This example shows how a network administrator can provide equal access to the Internet (or other external network) to different departments within a company. Each of four departments has its own Class B subnet that is allocated 25 percent of the available bandwidth on the port accessing the Internet.

![Diagram of Class B subnet with differentiated services]

**Figure 15. Class B subnet with differentiated services**

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure DiffServ**

1. Ensure that the DiffServ operation is enabled for the switch.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#diffserv
```
2. Create a DiffServ class of type all for each of the departments, and name them. Define the match criteria of source IP address for the new classes.

   (Netgear Switch) (Config)#class-map match-all finance_dept
   (Netgear Switch) (Config class-map)#match srcip 172.16.10.0 255.255.255.0
   (Netgear Switch) (Config class-map)#exit

   (Netgear Switch) (Config)#class-map match-all marketing_dept
   (Netgear Switch) (Config class-map)#match srcip 172.16.20.0 255.255.255.0
   (Netgear Switch) (Config class-map)#exit

   (Netgear Switch) (Config)#class-map match-all test_dept
   (Netgear Switch) (Config class-map)#match srcip 172.16.30.0 255.255.255.0
   (Netgear Switch) (Config class-map)#exit

   (Netgear Switch) (Config)#class-map match-all development_dept
   (Netgear Switch) (Config class-map)#match srcip 172.16.40.0 255.255.255.0
   (Netgear Switch) (Config class-map)#exit

3. Create a DiffServ policy for inbound traffic named 'internet_access', adding the previously created department classes as instances within this policy.

   This policy uses the assign-queue attribute to put each department's traffic on a different egress queue. This is how the DiffServ inbound policy connects to the CoS queue settings established in the following example.

   (Netgear Switch) (Config)#policy-map internet_access in
   (Netgear Switch) (Config policy-map)#class finance_dept
   (Netgear Switch) (Config policy-class-map)#assign-queue 1
   (Netgear Switch) (Config policy-class-map)#exit
   (Netgear Switch) (Config policy-map)#class marketing_dept
   (Netgear Switch) (Config policy-class-map)#assign-queue 2
   (Netgear Switch) (Config policy-class-map)#exit
   (Netgear Switch) (Config policy-map)#class test_dept
   (Netgear Switch) (Config policy-class-map)#assign-queue 3
   (Netgear Switch) (Config policy-class-map)#exit
   (Netgear Switch) (Config policy-map)#class development_dept
   (Netgear Switch) (Config policy-class-map)#assign-queue 4
   (Netgear Switch) (Config policy-class-map)#exit
   (Netgear Switch) (Config policy-map)#exit
4. Attach the defined policy to interfaces 1/0/1 through 1/0/4 in the inbound direction.

(Netgear Switch) (Config)#interface 1/0/1
(Netgear Switch) (Interface 1/0/1)#service-policy in internet_access
(Netgear Switch) (Interface 1/0/1)#exit

(Netgear Switch) (Config)#interface 1/0/2
(Netgear Switch) (Interface 1/0/2)#service-policy in internet_access
(Netgear Switch) (Interface 1/0/2)#exit

(Netgear Switch) (Config)#interface 1/0/3
(Netgear Switch) (Interface 1/0/3)#service-policy in internet_access
(Netgear Switch) (Interface 1/0/3)#exit

(Netgear Switch) (Config)#interface 1/0/4
(Netgear Switch) (Interface 1/0/4)#service-policy in internet_access
(Netgear Switch) (Interface 1/0/4)#exit

5. Set the CoS queue configuration for the (presumed) egress interface 1/0/5 such that each of queues 1, 2, 3, and 4 gets a minimum guaranteed bandwidth of 25 percent. All queues for this interface use weighted round robin scheduling by default. The DiffServ inbound policy designates that these queues are to be used for the departmental traffic through the assign-queue attribute. It is presumed that the switch will forward this traffic to interface 1/0/5 based on a normal destination address lookup for Internet traffic.

(Netgear Switch) (Config)#interface 1/0/5
(Netgear Switch) (Interface 1/0/5)#cos-queue min-bandwidth 0 25 25 25 25 0 0 0
(Netgear Switch) (Interface 1/0/5)#exit
(Netgear Switch) (Config)#exit

Web Interface: Configure DiffServ

1. Enable Diffserv.
   a. Select QoS > DiffServ > Basic > DiffServ Configuration.
      A screen similar to the following displays.

     ![DiffServ Configuration Screen]

   b. For Diffserv Admin Mode, select the Enable radio button.
   c. Click Apply to save the settings.
2. Create the class finance_dept.
   a. Select QoS > DiffServ > Advanced > Class Configuration.
      A screen similar to the following displays.
      
      b. Enter the following information:
         • In the **Class Name** field, enter **finance_dept**.
         • In the **Class Type** list, select **All**.
      c. Click **Add** to create a new class finance_dept.
      d. Click the **finance_dept** to configure this class.

      e. Under DiffServ Class Configuration, enter the following information:
         • In the **Source IP Address** field, enter **172.16.10.0**.
         • In the **Source Mask** field, enter **255.255.255.0**.
      f. Click **Apply**.

3. Create the class marketing_dept:
   a. Select QoS > DiffServ > Advanced > Class Configuration.
A screen similar to the following displays.

b. Enter the following information:
   • In the Class Name field, enter marketing_dept.
   • In the Class Type list, select All.

c. Click Add to create a new class marketing_dept.

d. Click marketing_dept to configure this class.

e. Under Diffserv Class Configuration, enter the following information:
   • In the Source IP Address field, enter 172.16.20.0.
   • In the Source Mask field, enter 255.255.255.0.

f. Click Apply.

4. Create the class test_dept:
   a. Select QoS > DiffServ > Advanced >Class Configuration.
A screen similar to the following displays.

![DiffServ Configuration](image)

b. Enter the following information:
   - In the **Class Name** field, enter **test_dept**.
   - In the **Class Type** list, select **All**.

c. Click **Add** to create a new class test_dept.

d. Click **test_dept** to configure this class.

![Class Configuration](image)

e. Under **DiffServ Class Configuration**, enter the following information:
   - In the **Source IP Address** field, enter **172.16.30.0**.
   - In the **Source Mask** field, enter **255.255.255.0**.

f. Click **Apply**.

5. Create class development_dept.
   a. Select **QoS > DiffServ > Advanced > Class Configuration**.

---

**DiffServ**

149
A screen similar to the following displays.

b. Enter the following information:
   • In the **Class Name** field, enter `development_dept`.
   • In the **Class Type** list, select `All`.

c. Click the **Add** to create a new class `development_dept`.

d. Click `development_dept` to configure this class.

e. Under Diffserv Class Configuration, enter the following information:
   • In the **Source IP Address** field, enter `172.16.40.0`.
   • In the **Source Mask** field, enter `255.255.255.0`.

f. Click **Apply**.

6. Create a policy named `internet_access` and add the class `finance_dept` to it.
   a. Select **QoS > DiffServ > Advanced > Policy Configuration**.
A screen similar to the following displays.

b. Enter the following information:
   • In the Policy Selector field, enter internet_access.
   • In the Member Class list, select the finance_dept.

c. Click Add to create a new policy internet_access.

7. Add the class marketing_dept into the policy internet_access.
   a. Select QoS > DiffServ > Advanced > Policy Configuration.
   A screen similar to the following displays.

b. Under Policy Configuration, scroll down and select the internet_access check box. Internet_access now appears in the Policy Selector field at the top.

c. In the Member Class list, select marketing_dept.

d. Click Apply to add the class marketing_dept to the policy internet_access.

8. Add the class test_dept into the policy internet_access.
   a. Select QoS > DiffServ > Advanced > Policy Configuration.
A screen similar to the following displays.

![DiffServ Configuration](image_url)

b. Under Policy Configuration, scroll down and select the **internet_access** check box. Internet_access now appears in the Policy Selector field at the top.

c. In the **Member Class** list, select **test_dept**.

d. Click **Apply** to add the class test_dept to the policy internet_access.

9. Add the class development_dept into the policy internet_access.

a. Select **QoS > DiffServ > Advanced > Policy Configuration**.

A screen similar to the following displays.

![DiffServ Configuration](image_url)

b. Under Policy Configuration, scroll down and select the **internet_access** check box. Now internet_access appears in the Policy Selector field at the top.

c. In the **Member Class** list, select **development_dept**.

d. Click **Apply** to add the class development_dept to the policy internet_access.

10. Assign queue 1 to finance_dept.

a. Select **QoS > DiffServ > Advanced > Policy Configuration**.

A screen similar to the following displays.

![DiffServ Wizard](image)

b. Click the **internet_access** check box for the member class finance_dept.

A screen similar to the following displays.

![Policy Class Configuration](image)

c. In the **Assign Queue** list, select 1.

d. Click **Apply**.

11. Assign queue 2 to marketing_dept.

   a. Select **QoS > DiffServ > Advanced > Policy Configuration.**
A screen similar to the following displays.

b. Click the internet_access check box for marketing_dept.

A screen similar to the following displays.

c. In the Assign Queue list, select 2.
d. Click Apply.

12. Assign queue 3 to test_dept.
   a. Select QoS > DiffServ > Advanced > Policy Configuration.
b. Click the internet_access check mark for test_dept. A screen similar to the following displays.

c. In the Assign Queue list, select 3.

d. Click Apply.

13. Assign queue 4 to development_dept.

   a. Select QoS > DiffServ > Advanced > Policy Configuration.
A screen similar to the following displays.

![DiffServ Wizard Basic Advanced DiffServ Configuration Class Configuration Policy Configuration]

b. Click the **internet_access** check mark for development_dept.

A screen similar to the following displays.

![Policy Class Configuration]

c. In the **Assign Queue** list, select 4.

d. Click **Apply**.

14. Attach the defined policy to interfaces 1/0/1 through 1/0/4 in the inbound direction.

a. Select **QoS > DiffServ > Advanced > Service Configuration**.
A screen similar to the following displays.

b. Scroll down and select the check boxes for interfaces 1/0/1, 1/0/2, 1/0/3, and 1/0/4.
c. In the Policy In list, select internet_access.
d. Click Apply.

15. Set the CoS queue 1 configuration for interface 1/0/5.

A screen similar to the following displays.

b. Scroll down and select the Interface 1/0/5 check box.
   Now 1/0/5 appears in the Interface field at the top.
c. In the Queue ID list, select 1.
d. In the Minimum Bandwidth field, enter 25.
e. Click Apply.

16. Set the CoS queue 2 configuration for interface 1/0/5.
A screen similar to the following displays.

![Interface Queue Configuration Screen](image)

b. Under Interface Queue Configuration, scroll down and select the interface 1/0/5 check box.

Now 1/0/5 appears in the Interface field at the top.

c. In the Queue ID list, select 2.
d. In the Minimum Bandwidth field, enter 25.
e. Click Apply.

17. Set the CoS queue 3 configuration for interface 1/0/5.

A screen similar to the following displays.

![Interface Queue Configuration Screen](image)

b. Under Interface Queue Configuration, scroll down and select the interface 1/0/5 check box.

Now 1/0/5 appears in the Interface field at the top.

c. In the Queue ID list, select 3.
d. In the **Minimum Bandwidth** field, enter **25**.

e. Click **Apply**.

18. Set the CoS queue 4 configuration for interface 1/0/5.

a. Select **QoS > CoS > Advanced > Interface Queue Configuration**.

A screen similar to the following displays.

![Interface Queue Configuration](image)

b. Under Interface Queue Configuration, scroll down and select the Interface **1/0/5** check box.

Now 1/0/5 appears in the Interface field at the top.

c. In the **Queue ID** list, select **4**.

d. In the **Minimum Bandwidth** field, enter **25**.

e. Click **Apply**.

DiffServ for VoIP

One of the most valuable uses of DiffServ is to support Voice over IP (VoIP). VoIP traffic is inherently time sensitive: For a network to provide acceptable service, a guaranteed transmission rate is vital. This example shows one way to provide the necessary quality of service: how to set up a class for UDP traffic, have that traffic marked on the inbound side, and then expedite the traffic on the outbound side. The configuration script is for Router 1 in the accompanying diagram: A similar script should be applied to Router 2.
The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure DiffServ for VoIP**

1. Enter Global configuration mode. Set queue 5 on all ports to use strict priority mode. This queue will be used for all VoIP packets. Activate DiffServ for the switch.

   ```
   (Netgear Switch) #config
   (Netgear Switch) (Config)#cos-queue strict 5
   (Netgear Switch) (Config)#diffserv
   ```

2. Create a DiffServ classifier named `class_voip` and define a single match criterion to detect UDP packets. The class type `match-all` indicates that all match criteria defined for the class must be satisfied in order for a packet to be considered a match.

   ```
   (Netgear Switch) (Config)#class-map match-all class_voip
   (Netgear Switch) (Config class-map)#match protocol udp
   (Netgear Switch) (Config class-map)#exit
   ```
3. Create a second DiffServ classifier named `class Ef` and define a single match criterion to detect a DiffServ code point (DSCP) of EF (expedited forwarding). This handles incoming traffic that was previously marked as expedited somewhere in the network.

```
(Netgear Switch) (Config)#class-map match-all class_ef
(Netgear Switch) (Config class-map)#match ip dscp ef
(Netgear Switch) (Config class-map)#exit
```

4. Create a DiffServ policy for inbound traffic named `pol_voip`, then add the previously created classes `class Ef` and `class_voip` as instances within this policy.

This policy handles incoming packets already marked with a DSCP value of EF (according to the `class Ef` definition), or marks UDP packets according to the `class_voip` definition) with a DSCP value of EF. In each case, the matching packets are assigned internally to use queue 5 of the egress port to which they are forwarded.

```
(Netgear Switch) (Config)#policy-map pol_voip in
(Netgear Switch) (Config policy-map)#class class_ef
(Netgear Switch) (Config policy-class-map)#assign-queue 5
(Netgear Switch) (Config policy-class-map)#exit
(Netgear Switch) (Config policy-map)#class class_voip
(Netgear Switch) (Config policy-class-map)#mark ip-dscp ef
(Netgear Switch) (Config policy-class-map)#assign-queue 5
(Netgear Switch) (Config policy-class-map)#exit
(Netgear Switch) (Config policy-map)#exit
```

5. Attach the defined policy to an inbound service interface.

```
(Netgear Switch) (Config)#interface 1/0/2
(Netgear Switch) (Interface 1/0/2)#service-policy in pol_voip
(Netgear Switch) (Interface 1/0/2)#exit
(Netgear Switch) (Config)#exit
```

**Web Interface: Diffserv for VoIP**

1. Set queue 5 on all interfaces to use strict mode.
A screen similar to the following displays.

b. Under Interface Queue Configuration, select all the interfaces.

c. In the Queue ID list, select 5.

d. In the Scheduler Type list, select Strict.

e. Click Apply to save the settings.

2. Enable DiffServ.

a. Select QoS > DiffServ > Basic > DiffServ Configuration.

A screen similar to the following displays.

b. For DiffServ Admin Mode, select the Enable radio button.

c. Click Apply to save the settings.

3. Create a class class_voip.

a. Select QoS > DiffServ > Advanced > DiffServ Configuration.

A screen similar to the following displays.
b. In the **Class Name** field, enter **class_voip**.

c. In the **Class Type** list, select **All**.

d. Click **Add** to create a new class.

e. Click **class_voip**.

A screen similar to the following displays:

![DiffServ Class Configuration](image)

f. In the **Protocol Type** list, select **UDP**.

g. Click **Apply** to create a new class.

4. Create a class **class_ef**:

a. Select **QoS > DiffServ > Advanced > DiffServ Configuration**.

A screen similar to the following displays.

![Class Configuration](image)

b. In the **Class Name** field, enter **class_ef**.

c. In the **Class Type** list, select **All**.

d. Click **Add** to create a new class.

e. Click **class_ef**.
Another screen similar to the following displays:

5. Create a policy pol_voip and add class_voip to this policy.
   a. Select QoS > DiffServ > Advanced > Policy Configuration.
      A screen similar to the following displays.

   b. In the Policy Selector field, enter pol_voip.
   c. In the Member Class list, select class_voip.
   d. Click Add to create a new policy.
   e. Click the pol_voip whose class member is class_voip.
In the Assign Queue list, select 5.

For Policy Attribute, select the Mark IP DSCP radio button, and select ef.

Click Apply to create a new policy.

6. Add class_ef to the policy pol_voip.

a. Select QoS > DiffServ > Advanced > Policy Configuration.

A screen similar to the following displays.

b. Under Policy Configuration, scroll down and select the pol_voip check box. Pol_voip now appears in the Policy Selector field at the top.

c. In the Member Class list, select class_ef in.

d. Click Apply to add the class class_ef to the policy pol_voip.

e. Click the pol_voip whose class member is class_ef.
A screen similar to the following displays.

```
f. In the **Assign Queue** list, select **5**.
g. Click **Apply** to create a new policy.

7. Attach the defined policy to interface 1/0/2 in the inbound direction.
a. Select **QoS > DiffServ > Advanced > Service Configuration**.
   A screen similar to the following displays.

```

```
b. Scroll down and select the Interface **1/0/2** check box.
   Now 1/0/2 appears in the Interface field at the top.
c. In the **Policy In** list, select **pol_voip**.
d. Click **Apply** to create a new policy.
```
Auto VoIP

The Auto-VoIP feature makes it easy to set up VoIP for IP phones on a switch. This functionality copies VoIP signaling packets to the CPU to get the source and destination IP address and Layer 4 port of the current session. Based on these parameters a filter is installed to assign the highest priority to VOIP data packets. As soon as the call ends, the filters are removed.

![Diagram](image)

**Figure 17. Auto VoIP**

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Auto VoIP**

This script in this section shows how to set up auto VoIP system-wide.

1. Enable auto VoIP on all the interfaces in the device.

```
(Netgear Switch) (Config)# auto-voip all
```
2. View the auto VoIP information:

(Netgear Switch) # show auto-voip interface all

<table>

Auto VoIP classifies and prioritizes the packets and places only the packets in the higher-priority queue. In the previous example, the packets are placed in queue 6. You can override the egress queue setting using the `cos-queue strict` or `cos-queue min-bandwidth` command.
Web Interface: Configure Auto-VoIP

1. Enable auto VoIP for all the interfaces in the device.
   a. Select QoS > DiffServ > Auto VoIP.
      A screen similar to the following displays.
   b. Select the check box in the first row to select all the interfaces.
   c. In the Auto VoIP Mode field, select Enable.
      A screen similar to the following displays.
   d. Click Apply.
      A screen similar to the following displays.
DiffServ for IPv6

This feature extends the existing QoS ACL and DiffServ functionality by providing support for IPv6 packet classification.

Figure 18. DiffServ for IPv6

The example is shown as CLI commands and as a web interface procedure.

**CLI: Configure DiffServ for IPv6**

The script in this section shows how to prioritize ICMPv6 traffic over other IPv6 traffic.

1. Create the IPv6 class classicmpv6.

```bash
(Netgear Switch) (Config)# class-map match-all classicmpv6 ipv6
```
2. Define matching criteria as protocol ICMPv6.

   ```
   (Netgear Switch) (Config-classmap) # match protocol 58
   (Netgear Switch) (Config-classmap) # exit
   ```

3. Create the policy policyicmpv6.

   ```
   (Netgear Switch) (Config)# policy-map policyicmpv6 in
   ```

4. Associate the previously created class classicmpv6.

   ```
   (Netgear Switch) (Config-policy-map)# class classicmpv6
   ```

5. Set the attribute as assign queue 6.

   ```
   (Netgear Switch) (Config-policy-classmap)# assign-queue 6
   (Netgear Switch) (Config-policy-map)# exit
   ```

6. Attach the policy policy_icmpv6 to interfaces 1/0/1, 1/0/2 and 1/0/3:

   ```
   (Netgear Switch) (Config)# interface 1/0/1
   (Netgear Switch) (Interface 1/0/1)# service-policy in policyicmpv6
   (Netgear Switch) (Interface 1/0/1)# exit

   (Netgear Switch) (Config)# interface 1/0/2
   (Netgear Switch) (Interface 1/0/2)# service-policy in policyicmpv6
   (Netgear Switch) (Interface 1/0/2)# exit

   (Netgear Switch) (Config)# interface 1/0/3
   (Netgear Switch) (Interface 1/0/3)# service-policy in policyicmpv6
   (Netgear Switch) (Interface 1/0/3)# exit
   ```
Web Interface: Configure DiffServ for IPv6

1. Create the IPv6 class classicmpv6.
   a. Select QoS > DiffServ > Advanced > IPv6 Class Configuration.
      A screen similar to the following displays.

   b. In the **Class Name** field, enter **classicmpv6**.
   c. In the **Class Type** list, select **All**.
      A screen similar to the following displays.

   d. Click **Add** to create the IPv6 class.
      A screen similar to the following displays.

2. Define matching criteria as protocol ICMPv6.
   a. Select QoS > DiffServ > Advanced > IPv6 Class Configuration.
b. Click the class **classicmpv6**.

A screen similar to the following displays.

![Screen displaying IPv6 Class Configuration]

b. Click the class **classicmpv6**.

A screen similar to the following displays.

![Screen displaying IPv6 Class Configuration]

c. Select the **Protocol Type** radio button, select **Other**, and enter **58**.

A screen similar to the following displays.

![Screen displaying Class Configuration]

d. Click **Apply**.
3. Create the policy policyicmpv6, and associate the previously created class classicmpv6.
   a. Select QoS > DiffServ > Advanced > Policy Configuration.
      A screen similar to the following displays.

      ![Policy Configuration Screen]

    b. In the Policy Name field, enter policyicmpv6.
    c. In the Policy Type list, select In.
    d. In the Member Class list, select classicmpv6.
      A screen similar to the following displays.

      ![Policy Configuration Screen]

    e. Click Add.
4. Set the attribute as assign queue 6.
   a. Select **QoS > DiffServ > Advanced > Policy Configuration.**
      
      A screen similar to the following displays.

      ![Policy Configuration Screen](image1)

      b. Click the policy **policyicmpv6.**
      
      A screen similar to the following displays.

      ![Policy Configuration Screen](image2)
c. In the **Assign Queue** list, select 6.

![DiffServ Configuration](image1.png)

d. Click **Apply**.

5. Attach the policy `policyicmpv6` to interfaces 1/0/1, 1/0/2 and 1/0/3.
   
a. Select **QoS > DiffServ > Advanced > Service Interface Configuration**.
   
   A screen similar to the following displays.

![Service Interface Configuration](image2.png)

b. In the **Policy Name** list, select `policyicmpv6`.

c. Select the Interface 1/0/1, 1/0/2, and 1/0/3 check boxes.
d. Click **Apply**.

A screen similar to the following displays.

**Color Conform Policy**

This example shows how to create a policy to police the traffic to a committed rate. The packets with IP precedence value of 7 are colored green to ensure that these packets are the last to be dropped when there is congestion. The example is shown as CLI commands and as a web interface procedure.
CLI: Configure a Color Conform Policy

1. Create a VLAN 5 and configure ports 1/0/13 and 1/0/25 as its members.

   (Netgear Switch) #vlan database
   (Netgear Switch) (Vlan)#vlan 5
   (Netgear Switch) (Vlan)#exit
   (Netgear Switch) #config
   (Netgear Switch) (Config)#interface 1/0/13
   (Netgear Switch) (Interface 1/0/13)#vlan participation include 5
   (Netgear Switch) (Interface 1/0/13)#vlan tagging 5
   (Netgear Switch) (Interface 1/0/13)#exit
   (Netgear Switch) (Config)#interface 1/0/25
   (Netgear Switch) (Interface 1/0/25)#vlan participation include 5
   (Netgear Switch) (Interface 1/0/25)#vlan tagging 5
   (Netgear Switch) (Interface 1/0/25)#exit

2. Create classes class_vlan and class_color.

   Note: DiffServ service is enabled by default.

   (Netgear Switch) (Config)#class-map match-all class_vlan
   (Netgear Switch) (Config-classmap)#match vlan 5
   (Netgear Switch) (Config-classmap)#exit
   (Netgear Switch) (Config)#class-map match-all class_color
   (Netgear Switch) (Config-classmap)#match ip precedence 7
   (Netgear Switch) (Config-classmap)#exit

3. Create a policy to police the traffic to a rate of 1000 kbps with an allowed burst size of 64 KB. Furthermore, the packets with IP precedence value of 7 will be colored green. That means these packets will be the last packets to be dropped in the event of congestion beyond the policed rate.

   (Netgear Switch) (Config)#policy-map policy_vlan in
   (Netgear Switch) (Config-policy-map)#class class_vlan
   (Netgear Switch) (Config-policy-classmap)#police-simple 1000 64 conform-action transmit violate-action drop
   (Netgear Switch) (Config-policy-classmap)#conform-color class_color
   (Netgear Switch) (Config-policy-classmap)#exit
   (Netgear Switch) (Config-policy-map)#exit
4. Apply this policy to port 1/0/13.

{(Netgear Switch) (Config)#interface 1/0/13
(Netgear Switch) (Interface 1/0/13)#service-policy in policy_vlan
(Netgear Switch) (Interface 1/0/13)#exit
(Netgear Switch) (Config)#exit

Web Interface: Configure a Color Conform Policy

1. Create a VLAN.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
      A screen similar to the following displays.

      ![VLAN Configuration Screen](image.png)

      b. In the **VLAN ID** field, enter **5**.
      c. Click **Add**.

2. Add ports 1/0/13 and 1/0/25 to VLAN 5.
   a. Select **Switching > VLAN > Advanced > VLAN Membership**.
      A screen similar to the following displays.

      ![VLAN Membership Screen](image.png)

      b. In the **VLAN ID** list, select **5**.
c. Click **Unit 1**. The ports display.

d. Click the gray boxes under ports **13** and **25** until **T** displays.
   The **T** specifies that the egress packet is tagged for the port.

e. Click **Apply**.

3. Create a class **class_vlan**:

a. Select **QoS > DiffServ > Advanced > Class Configuration**.
   A screen similar to the following displays.

b. Enter the following information:
   - In the **Class Name** field, enter **class_vlan**.
   - In the **Class Type** list, select **All**.

c. Click **Add** to create a new class **class_vlan**.

d. Click **class_vlan** to configure this class.
A screen similar to the following displays:

4. Create a class class_color.
   a. Select **QoS > DiffServ > Advanced > Class Configuration**.
      
      A screen similar to the following displays.

b. Enter the following information:
   - In the **Class Name** field, enter **class_color**.
   - In the **Class Type** list, select **All**.
c. Click **Add** to create a new class **class_color**.

![DiffServ Class Configuration](image)

A screen similar to the following displays:

```plaintext
<table>
<thead>
<tr>
<th>Class Name</th>
<th>Precedence Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>class_color</td>
<td>7</td>
</tr>
</tbody>
</table>
```

d. Click **class_color** to configure this class.

5. Create a policy **policy_vlan**.

a. Select **QoS > DiffServ > Advanced > Policy Configuration**.

```plaintext
te. Under Diffserv Class Configuration, in the **Precedence Value** list, select 7.

f. Click **Apply**.
```
A screen similar to the following displays.

b. In the **Policy Name** field, enter `policy_vlan`.

c. In the **Policy Type** list, select **In**.

d. Click **Add**.

6. **Associate policy_vlan with class_vlan.**

a. Select **QoS > DiffServ > Advanced > Policy Configuration**.

A screen similar to the following displays.

b. Under **Policy Configuration**, scroll down and select the **policy_vlan** check box.

c. In the **Member Class** field, enter `class_vlan`.

d. Click **Apply**.

7. **Configure policy_vlan.**

a. Select **QoS > DiffServ > Advanced > Policy Configuration**.

b. Click **policy_vlan**.
A screen similar to the following displays.

```
c. Select the **Simple Policy** radio button.
d. In the **Color Mode** list, select **Color Aware**.
e. In the **Color Conform Class** list, select **class_color**.
f. In the **Committed Rates** field, enter **1000**.
g. In the **Committed Burst Size** field, enter **64**.
h. For Conform Action, select the **Send** radio button.
i. For Violate Action, select the **Drop** radio button.
j. Click **Apply**.
```

8. Apply policy_vlan to interface 1/0/13.

```
a. Select **QoS > DiffServ > Advanced > Service Interface Configuration**.
```
A screen similar to the following displays.

b. Under Service Interface Configuration, scroll down and select the Interface 1/0/13 check box.

c. In the Policy Name list, select policy_vlan.

d. Click Apply to save the settings.
IGMP Snooping and Querier

Internet Group Management Protocol features

This chapter includes the following sections:

- Internet Group Management Protocol Concepts
- IGMP Snooping
- Show igmp-snooping
- Show mac-address-table igmp-snooping
- External Multicast Router
- Multicast Router Using VLAN
- IGMP Querier
- Enable IGMP Querier
- Show IGMP Querier Status
Internet Group Management Protocol Concepts

NETGEAR implements Internet Group Management Protocol (IGMP) in the following way:

• IGMP uses version 1, version 2, or version 3.
• IGMP includes snooping.
• You can enable IGMP snooping on a per-VLAN basis.

IGMP Snooping

The following are examples of the commands used in the IGMP snooping feature.

CLI: Enable IGMP Snooping

The following example shows how to enable IGMP snooping.

(Netgear Switch) #config
(Netgear Switch) (Config)#set igmp
(Netgear Switch) (Config)# set igmp unknown-multicast filter
(Netgear Switch) (Config)#exit

Web Interface: Enable IGMP Snooping

Configure IGMP snooping:

1. Select Switching > Multicast > IGMP Snooping Configuration.

   A screen similar to the following displays.

2. For Admin Mode select the Enable radio button.
3. For Unknown Multicast Filtering, select the Enable radio button.
4. Click Apply.
Show igmpsnooping

The example is shown as CLI commands and as a Web interface procedure.

CLI: Show igmpsnooping

(Netgear Switch) #show igmpsnooping
Admin Mode..................................... Disable
Unknown Multicast Filtering.................... Disable
Multicast Control Frame Count.................. 0
Interfaces Enabled for IGMP Snooping......... None
VLANs enabled for IGMP snooping.............. None

Web Interface: Show igmpsnooping

Select Switching > Multicast > IGMP Snooping Configuration. A screen similar to the following displays.
Show mac-address-table igmpsnooping

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Show mac-address-table igmpsnooping**

```
(Netgear Switch) #show mac-address-table igmpsnooping 

<cr> Press Enter to execute the command.

(Netgear Switch) #show mac-address-table igmpsnooping

<table>
<thead>
<tr>
<th>Type</th>

</tbody>
</table>
```

**Web Interface: Show mac-address-table igmpsnooping**

Select **Switching > Multicast > IGMP Snooping Table**.

A screen similar to the following displays.
External Multicast Router

The example is shown as CLI commands and as a Web interface procedure.

CLI: Configure the Switch with an External Multicast Router

This example configures the interface as the one the multicast router is attached to. All IGMP packets snooped by the switch is forwarded to the multicast router reachable from this interface.

(Netgear Switch)(Interface 1/0/3)# set igmp mrouter interface

Web Interface: Configure the Switch with an External Multicast Router

1. Select Switching > Multicast > Multicast Router Configuration.
   A screen similar to the following displays.

2. Under Multicast Router Configuration, scroll down and select the Interface 1/0/3 check box.
   Now 1/0/3 appears in the Interface field at the top.

3. In the Admin Mode field, select Enable.

4. Click Apply.
Multicast Router Using VLAN

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure the Switch with a Multicast Router Using VLAN**

This example configures the interface to forward only the snooped IGMP packets that come from VLAN ID (&lt;VLAN Id&gt;) to the multicast router attached to this interface.

```
(Netgear Switch)(Interface 1/0/3)# set igmp mrouter 2
```

**Web Interface: Configure the Switch with a Multicast Router Using VLAN**

1. Select **Switching > Multicast > Multicast Router VLAN Configuration**.
   A screen similar to the following displays.

2. Under Multicast Router VLAN Configuration, scroll down and select the Interface 1/0/3 check box.

3. Enter the following information in the Multicast Router VLAN Configuration.
   - In the **VLAN ID** field, enter 2.
   - In the **Multicast Router** field, select **Enable**.

4. Click **Apply**.
IGMP Querier

When the switch is used in network applications where video services such as IPTV, video streaming, and gaming are deployed, the video traffic is normally flooded to all connected ports because such traffic packets usually have multicast Ethernet addresses. IGMP snooping can be enabled to create a multicast group to direct that traffic only to those users that require it.

However, the IGMP snooping operation usually requires an extra network device—usually a router—that can generate an IGMP membership query and solicit interested nodes to respond. With the built-in IGMP querier feature inside the switch, such an external device is no longer needed.

![Figure 19. IGMP querier](image)

Since the IGMP querier is designed to work with IGMP snooping, it is necessary to enable IGMP snooping when using it. The following figure shows a network application for video streaming service using the IGMP querier feature.
Enable IGMP Querier

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Enable IGMP Querier**

Use the following CLI commands to set up the switch to generate an IGMP querier packet for a designated VLAN. The IGMP packet will be transmitted to every port on the VLAN. The following example enables the querier for VLAN 1 and uses 10.10.10.1 as the source IP address in querier packets. See the *Command Line Reference* for more details about other IGMP querier command options.

```
(Netgear switch) #vlan database
(Netgear switch) (vlan)#set igmp 1
(Netgear switch) (vlan)#set igmp querier 1
(Netgear switch) (vlan)#exit
(Netgear switch) #config
(Netgear switch) (config)#set igmp querier
(Netgear switch) (config)#set igmp querier address 10.10.10.1
(Netgear switch) (config)#exit
```

**Web Interface: Enable IGMP Querier**

1. Select **Switching > Multicast > IGMP VLAN Configuration**.
   
   A screen similar to the following displays.

   ![Switching > Multicast > IGMP VLAN Configuration](image)

2. Enable IGMP snooping on VLAN 1.
   
   a. Select **Switching > Multicast > IGMP Snooping > IGMP VLAN Configuration**.
IGMP Snooping and Querier

A screen similar to the following displays.

3. Enable the IGMP snooping querier globally.
   a. Select Switching > Multicast > IGMP Snooping > IGMP VLAN Configuration.
      A screen similar to the following displays.

      b. Enter the following information:
         • For Querier Admin Mode, select the Enable radio button.
         • In the Querier IP Address field, enter 10.10.10.1.
      c. Click Apply.

4. Enable the IGMP snooping querier on VLAN 1.
   a. Select Switching > Multicast > IGMP Snooping Querier VLAN Configuration.

      b. Enter the following information:
         • In the VLAN ID field, enter 1.
         • In the Admin Mode field, select Enable.
      c. Click Add.
A screen similar to the following displays.

![IGMP Snooping and Querier](image)

b. In the **VLAN ID** field, enter 1.

5. Click **Add**.

**Show IGMP Querier Status**

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Show IGMP Querier Status**

To see the IGMP querier status, use the following command.

```
(Netgear Switch) #show igmpsnooping querier vlan 1
VLAN 1 : IGMP Snooping querier status
----------------------------------------------
IGMP Snooping Querier VLAN Mode................ Enable
Querier Election Participate Mode.............. Disable
Querier VLAN Address........................... 0.0.0.0
Operational State.............................. Disabled
Operational version............................ 2
```

The command shows that the IGMP admin mode is Active. The mode is controlled by the **set igmp** command. If the mode is inactive, no query packet is sent.

**Web Interface: Show IGMP Querier Status**

1. Select **Switching > Multicast > IGMP Snooping Configuration**.
A screen similar to the following displays.

2. Click Refresh.
MVR
Multicast VLAN Registration

This chapter includes the following sections:

• MVR Concepts
• Configure MVR in Compatible Mode
• Configure MVR in Dynamic Mode
MVR Concepts

The IGMP Layer 3 protocol is widely used for IPv4 network multicasting. In Layer 2 networks, the IGMP protocol uses resources inefficiently. For example, a Layer 2 switch multicast traffic to all ports even if there are receivers connected to only a few ports.

To address this problem, the IGMP Snooping protocol was developed. But the problem reappears when receivers are in different VLANs. Multicast VLAN registration (MVR) is intended to solve the problem of receivers in different VLANs. It uses a dedicated manually configured VLAN, called the multicast VLAN, to forward multicast traffic over Layer 2 network in conjunction with IGMP snooping.

MVR, like the IGMP Snooping protocol, allows a Layer 2 switch to snoop on the IGMP control protocol. Both protocols operate independently of each other. Both protocols can be enabled on the switch interfaces at the same time. In such a case, MVR listens to the join and report messages only for groups configured statically. All other groups are managed by IGMP snooping.

There are two types of MVR ports: source and receiver.

- The source port is the port to which the multicast traffic flows using the multicast VLAN.
- The receiver port is the port where a listening host is connected to the switch. It can utilize any (or no) VLAN, except the multicast VLAN. This implies that the MVR switch performs VLAN tag substitution from the multicast VLAN source port to the VLAN tag used by the receiver port.

The Multicast VLAN is the VLAN that is configured in the specific network for MVR purposes. It has to be manually specified by the operator for all source ports in the network. It is a VLAN that is used to transfer multicast traffic over the network to avoid duplication of multicast streams for clients in different VLANs. A diagram of a network configured for MVR is shown in the following illustration. SP is the source port and RP is the receiver port.
Note: The following examples show how to configure the MVR on the MVR switch (GSM7212P in this case).

Configure MVR in Compatible Mode

In compatible mode, the MVR switch does not learn multicast groups; the groups have to be configured by the operator as the MVR does not forward IGMP reports from the hosts (RP port) to the IGMP router (SP port). To operate in this mode, the IGMP router has to be statically configured to transmit all required multicast streams to the MVR switch.
CLI: Configure MVR in Compatible Mode

1. Create mVlan, VLAN1, VLAN2, and VLAN3.

   (Netgear Switch) #vlan database
   (Netgear Switch) (Vlan)#vlan 999,1001, 1002, 1003
   (Netgear Switch) (Vlan)#vlan name 999 mVlan
   (Netgear Switch) (Vlan)#vlan name 1001 Vlan1
   (Netgear Switch) (Vlan)#vlan name 1002 Vlan2
   (Netgear Switch) (Vlan)#vlan name 1003 Vlan3
   (Netgear Switch) (Vlan)#exit

2. Enable MVR, configure VLAN 999 as a multicast VLAN, and add group 224.1.2.3 to MVR.

   (Netgear Switch) #config
   (Netgear Switch) (Config)#mvr
   (Netgear Switch) (Config)#mvr vlan 999
   (Netgear Switch) (Config)#mvr group 224.1.2.3

3. Configure multicast VLAN on the source port.

   (Netgear Switch) (Config)#interface 0/9
   (Netgear Switch) (Interface 0/9)#vlan participation include 999
   (Netgear Switch) (Interface 0/9)#vlan tagging 999
   (Netgear Switch) (Interface 0/9)#mvr
   (Netgear Switch) (Interface 0/9)#mvr type source
   (Netgear Switch) (Interface 0/9)#exit

4. Configure the receive ports.

   Note: The receive port can participate in only one VLAN.
(Netgear Switch) (Config)#interface 0/1
(Netgear Switch) (Interface 0/1)#vlan participation include 1001
(Netgear Switch) (Interface 0/1)#vlan pvid 1001
(Netgear Switch) (Interface 0/1)#vlan participation exclude 1
(Netgear Switch) (Interface 0/1)#mvr
(Netgear Switch) (Interface 0/1)#mvr type receiver
(Netgear Switch) (Interface 0/1)#mvr vlan 999 group 224.1.2.3
(Netgear Switch) (Interface 0/1)#exit

(Netgear Switch) (Config)#interface 0/5
(Netgear Switch) (Interface 0/5)#vlan participation include 1002
(Netgear Switch) (Interface 0/5)#vlan pvid 1002
(Netgear Switch) (Interface 0/5)#vlan participation exclude 1
(Netgear Switch) (Interface 0/5)#mvr
(Netgear Switch) (Interface 0/5)#mvr stype receiver
(Netgear Switch) (Interface 0/5)#mvr vlan 999 group 224.1.2.3
(Netgear Switch) (Interface 0/5)#exit

(Netgear Switch) (Config)#interface 0/7
(Netgear Switch) (Interface 0/7)#vlan participation include 1003
(Netgear Switch) (Interface 0/7)#vlan pvid 1003
(Netgear Switch) (Interface 0/7)#vlan participation exclude 1
(Netgear Switch) (Interface 0/7)#mvr
(Netgear Switch) (Interface 0/7)#mvr type receiver
(Netgear Switch) (Interface 0/7)#mvr vlan 999 group 224.1.2.3
(Netgear Switch) (Interface 0/7)#exit

5. Show mvr status.

(Netgear Switch) #show mvr
MVR Running....................... TRUE
MVR multicast VLAN............... 999
MVR Max Multicast Groups....... 256
MVR Current multicast groups.... 1
MVR Global query response time.. 5 (tenths of sec)
MVR Mode......................... compatible
(Netgear Switch) #show mvr interface

</table>
Web Interface: Configure MVR in Compatible Mode

1. Create MVLAN 999, VLAN1 1001, VLAN2 1002 and VLAN3 1003.
   a. Select Switching > VLAN > Basic > VLAN Configuration.
      A screen similar to the following displays:
      ![VLAN Configuration Screen]
      b. In the VLAN ID field, enter 999, and in the VLAN Name field, enter mVlan.
      c. Click Add.
      d. Repeat step b and c to create VLAN1 1001, VLAN2 1002, and VLAN3 1003.

2. Add port 9 into MVLAN 999 with tagged mode.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays:
      ![VLAN Membership Screen]
      b. In the VLAN ID list, select 999.
      c. Click Unit 1. The ports display.
      d. Click the gray box under port 9 until T displays. The T specifies that the egress packet is tagged for the ports.
      e. Click Apply to save the settings.
      f. Repeat steps from b to e, add port 0/1 to VLAN1 1001, add port 0/5 to VLAN2 1002, and add port 0/7 to VLAN3 1003.

3. Enable MVR and multicast VLAN.
a. Select **Switching > MVR > Basic > MVR Configuration**. A screen similar to the following displays:

![MVR Configuration Screen](image)

b. For MVR Running, select **Enable**.

c. In the MVR Multicast VLAN field, enter **999**.

d. Click **Apply**.

4. Add multicast group 224.1.2.3 to MVR.

a. Select **Switching > MVR > Basic > MVR Group Configuration**. A screen similar to the following displays:

![MVR Group Configuration Screen](image)

b. In the MVR Group IP field, enter **224.1.2.3**.

c. Click **Add**.

5. Configure a receiver on interface 0/1, 0/5, and 0/7.

a. Select **Switching > MVR > Basic > MVR Interface Configuration**. A screen similar to the following displays:

![MVR Interface Configuration Screen](image)
b. Under MVR Interface Configuration, scroll down and select the Interface 0/1, 0/5 and 0/7 check boxes.

c. Enter the following information:
   • In the Admin Mode list, select Enable.
   • In the Type list, select Receiver.

d. Click Apply to save the settings.

6. Configure source interface.

a. Select Switching > MVR > Basic > MVR Interface Configuration. A screen similar to the following displays:

b. Under MVR Interface Configuration, scroll down and select the Interface 0/9 check box.

c. Enter the following information:
   • In the Admin Mode list, select Enable.
   • In the Type list, select source.

d. Click Apply to save the settings.

7. Configure MVR Group Membership.

a. Select Switching > VLAN > Advanced > VLAN Membership. A screen similar to the following displays:

b. In the Group IP list, select 224.1.2.3.

c. Click Unit 1. The ports display.
d. Click the gray boxes under ports 1, 5, and 7. (Port 9 is already in MVR group 224.1.2.3 because it is configured as the source port.)

e. Click **Apply** to save the settings.

## Configure MVR in Dynamic Mode

### CLI: Configure MVR in Dynamic Mode

In dynamic mode, the MVR switch learns existing multicast groups by snooping the IGMP queries from router on source ports and forwarding the IGMP reports from the hosts to the IGMP router on the Multicast VLAN (with appropriate translation of the VLAN ID).

1. Create MVLAN, VLAN1, VLAN2, and VLAN3.

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 999,1001, 1002, 1003
(Netgear Switch) (Vlan)#vlan name 999 mVlan
(Netgear Switch) (Vlan)#vlan name 1001 Vlan1
(Netgear Switch) (Vlan)#vlan name 1002 Vlan2
(Netgear Switch) (Vlan)#vlan name 1003 Vlan3
(Netgear Switch) (Vlan)#exit
```

2. Enable MVR, configure VLAN 999 as a multicast VLAN, and add group 224.1.2.3 to MVR.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#mvr
(Netgear Switch) (Config)#mvr vlan 999
(Netgear Switch) (Config)#mvr group 224.1.2.3
```

3. Configure MVR in dynamic mode.

```
(Netgear Switch) (Config)#mvr mode dynamic
```

4. Configure multicast VLAN on the source port.

```
(Netgear Switch) (Config)#interface 0/9
(Netgear Switch) (Interface 0/9)#vlan participation include 999
(Netgear Switch) (Interface 0/9)#vlan tagging 999
(Netgear Switch) (Interface 0/9)#mvr
(Netgear Switch) (Interface 0/9)#mvr type source
(Netgear Switch) (Interface 0/9)#exit
```

5. Configure the receive ports.
Note: A receive port can participate in only one VLAN.

(Netgear Switch) (Config)#interface 0/1
(Netgear Switch) (Interface 0/1)#vlan participation include 1001
(Netgear Switch) (Interface 0/1)#vlan pvid 1001
(Netgear Switch) (Interface 0/1)#vlan participation exclude 1
(Netgear Switch) (Interface 0/5)#mvr
(Netgear Switch) (Interface 0/1)#mvr type receiver
(Netgear Switch) (Interface 0/1)#exit

(Netgear Switch) (Config)#interface 0/5
(Netgear Switch) (Interface 0/5)#vlan participation include 1002
(Netgear Switch) (Interface 0/5)#vlan pvid 1002
(Netgear Switch) (Interface 0/5)#vlan participation exclude 1
(Netgear Switch) (Interface 0/5)#mvr
(Netgear Switch) (Interface 0/5)#mvr stype receiver
(Netgear Switch) (Interface 0/5)#exit

(Netgear Switch) (Config)#interface 0/7
(Netgear Switch) (Interface 0/7)#vlan participation include 1003
(Netgear Switch) (Interface 0/7)#vlan pvid 1003
(Netgear Switch) (Interface 0/7)#vlan participation exclude 1
(Netgear Switch) (Interface 0/7)#mvr
(Netgear Switch) (Interface 0/7)#mvr type receiver
(Netgear Switch) (Interface 0/7)#exit

6. Show the MVR status.

(Netgear Switch) #show mvr
MVR Running........................... TRUE
MVR multicast VLAN................. 999
MVR Max Multicast Groups.......... 256
MVR Current multicast groups...... 1
MVR Global query response time.... 5 (tenths of sec)
MVR Mode................................ compatible

(Netgear Switch) #show mvr interface

<table>

Web Interface: Configure MVR in Dynamic Mode

1. Create MVLAN 999, VLAN1 1001, VLAN2 1002, and VLAN3 1003.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**. A screen similar to the following displays:
   b. In the VLAN ID field, enter **999**, and in the VLAN Name field, enter **mVlan**.
   c. Click **Add**.
   d. Repeat step b and c to create VLAN1 1001, VLAN2 1002, and VLAN3 1003.
   e. Add port 9 into MVLAN 999 with tagged mode.
   f. Select **Switching > VLAN > Advanced > VLAN Membership**. A screen similar to the following displays:
   g. In the VLAN ID list, select **999**.
   h. Click **Unit 1**. The ports display.
   i. Click the gray boxes under port **9** until T displays. The T specifies that the egress packet is tagged for the ports.
   j. Click **Apply** to save the settings.
k. Repeat steps from b to e, add port 0/1 to VLAN1 1001, add port 0/5 to VLAN2 1002, and add port 0/7 to VLAN3 1003.

2. Enable MVR and multicast VLAN.
   a. Select Switching > MVR > Basic > MVR Configuration. A screen similar to the following displays:
   b. From the MVR Running list, select Enable.
   c. In the MVR Multicast Vlan field, enter 999.
   d. From the MVR mode list, select dynamic.
   e. Click Apply.

3. Add multicast group 224.1.2.3 to the MVR.
   a. Select Switching > MVR > Basic > MVR Group Configuration. A screen similar to the following displays:
   b. In the MVR Group IP field, enter 224.1.2.3.
   c. Click Add.

4. Configure a receiver on interface 0/1, 0/5 and 0/7.
a. Select **Switching > MVR > Basic > MVR Interface Configuration**. A screen similar to the following displays:

![MVR Interface Configuration Screen](image)

b. Under MVR Interface Configuration, scroll down and select the Interface 0/1, 0/5 and 0/7 check boxes.

c. Enter the following information:
   - In the Admin Mode list, select **Enable**.
   - In the Type list, select **Receiver**.

d. Click **Apply** to save the settings.

5. Configure a source interface.

a. Select **Switching > MVR > Basic > MVR Interface Configuration**. A screen similar to the following displays:

![MVR Interface Configuration Screen](image)

b. Under MVR Interface Configuration, scroll down and select the Interface 0/9 check box.
c. Enter the following information:
   • In the Admin Mode list, select Enable.
   • In the Type list, select source.

d. Click Apply to save the settings.

6. After port 1 receives an IGMP report for multicast group 224.1.2.3, it is added into MVR
group 224.1.2.3.

a. Select Switching > MVR > Advanced > MVR Group Membership. A screen similar
to the following displays:
This chapter includes the following sections:

- Port Security
- Set the Dynamic and Static Limit on Port 1/0/1
- Convert the Dynamic Address Learned from 1/0/1 to a Static Address
- Create a Static Address
- Protected Ports
- 802.1x Port Security
- Create a Guest VLAN
- Assign VLANs Using RADIUS
- Dynamic ARP Inspection
- Static Mapping
- DHCP Snooping
- Enter Static Binding into the Binding Database
- Maximum Rate of DHCP Messages
- IP Source Guard
Port Security

Port Security helps secure the network by preventing unknown devices from forwarding packets. When a link goes down, all dynamically locked addresses are freed. The port security feature offers the following benefits:

- You can limit the number of MAC addresses on a given port. Packets that have a matching MAC address (secure packets) are forwarded; all other packets (unsecure packets) are restricted.
- You can enable port security on a per port basis.

Port security implements two traffic filtering methods, dynamic locking and static locking. These methods can be used concurrently.

- **Dynamic locking.** You can specify the maximum number of MAC addresses that can be learned on a port. The maximum number of MAC addresses is platform dependent and is given in the software Release Notes. After the limit is reached, additional MAC addresses are not learned. Only frames with an allowable source MAC addresses are forwarded.

  Note: If you want to set a specific MAC address for a port, set the dynamic entries to 0, then allow only packets with a MAC address matching the MAC address in the static list.

Dynamically locked addresses can be converted to statically locked addresses. Dynamically locked MAC addresses are aged out if another packet with that address is not seen within the age-out time. You can set the time out value. Dynamically locked MAC addresses are eligible to be learned by another port. Static MAC addresses are not eligible for aging.

- **Static locking.** You can manually specify a list of static MAC addresses for a port. Dynamically locked addresses can be converted to statically locked addresses.
Set the Dynamic and Static Limit on Port 1/0/1

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Set the Dynamic and Static Limit on Port 1/0/1**

```
(Netgear Switch) (Config)#port-security
Enable port-security globally
(Netgear Switch) (Config)#interface 1/0/1
(Netgear Switch) (Interface 1/0/1)#port-security
Enable port-security on port 1/0/1
(Netgear Switch) (Interface 1/0/1)#port-security max-dynamic 10
Set the dynamic limit to 10
(Netgear Switch) (Interface 1/0/1)#port-security max-static 3
Set the static limit to 3
(Netgear Switch) (Interface 1/0/1)#ex
(Netgear Switch) (Config)#ex
(Netgear Switch) #show port-security 1/0/1

<table>
<thead>
<tr>
<th>Intf</th>
<th>Admin</th>
<th>Dynamic Limit</th>
<th>Static Limit</th>
<th>Trap Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/0/1</td>
<td>Disabled</td>
<td>10</td>
<td>3</td>
<td>Disabled</td>
</tr>
</tbody>
</table>
```

**Web Interface: Set the Dynamic and Static Limit on Port 1/0/1**

1. Select **Security > Traffic Control > Port Security >Port Administrator**.

A screen similar to the following displays.

b. Under Port Security Configuration, next to Port Security Mode, select the **Enable** radio button.

c. Click **Apply** to save the settings.

2. Set the dynamic and static limit on the port 1/0/1:

a. Select **Security > Traffic Control > Port Security >Interface Configuration**.
A screen similar to the following displays.

b. Scroll down and select the Interface 1/0/1 check box.
   Now 1/0/1 appears in the Interface field at the top.

c. Enter the following information:
   • In the Port Security field, select Enable.
   • In the Max Allowed Dynamically Learned MAC field, enter 10.
   • In the Max Allowed Statically Locked MAC field, enter 3.

d. Click Apply to save the settings.

**Convert the Dynamic Address Learned from 1/0/1 to a Static Address**

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Convert the Dynamic Address Learned from 1/0/1 to the Static Address**

```bash
(Netgear Switch)(Interface 1/0/1)#port-security mac-address move
Convert the dynamic address learned from 1/0/1 to the static address
(Netgear Switch)(Interface 1/0/1)#exit
(Netgear Switch)(Config)#exit
(Netgear Switch)#show port-security static 1/0/1
Number of static MAC addresses configured: 3
Statically configured MAC Address VLAN ID
---------------------------------------------
00:0E:45:30:15:F3  1
00:13:46:EC:2F:62  1
00:14:6C:E8:81:23  1
```
Web Interface: Convert the Dynamic Address Learned from 1/0/1 to the Static Address

1. Select **Security > Traffic Control > Port Security > Dynamic MAC Address**.

   A screen similar to the following displays.

2. Under Port Security Configuration, in the **Port List** field, select **1/0/1**.

3. Select the **Convert Dynamic Address to Static** check box.

4. Click **Apply** to save the settings.

Create a Static Address

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Create a Static Address**

```text
(Netgear Switch) (Interface 1/0/1)#port-security mac-address 00:13:00:01:02:03
```
Web Interface: Create a Static Address

1. Select Security > Traffic Control > Port Security > Static MAC address. A screen similar to the following displays.

![Static MAC Address Configuration](image)

2. Under Port List, in the Interface list, select 1/0/1.
3. In the Static MAC Address section of the screen, enter the following information:
   - In the Static MAC Address field, enter 00:13:00:01:02:03.
   - In the Vlan ID list, select 3.
4. Click Add.

Protected Ports

This section describes how to set up protected ports on the switch. Some situations might require that traffic is prevented from being forwarded between any ports at Layer 2 so that one user cannot see the traffic of another user on the same switch. Protected ports can:

- Prevent traffic from being forwarded between protected ports.
- Allow traffic to be forwarded between a protected port and a non-protected port.

In following example, PC 1 and PC 2 can access the Internet as usual, but PC 1 cannot see the traffic that is generated by PC 2, that is, no traffic is forwarded between PC 1 and PC 2.
CLI: Configure a Protected Port to Isolate Ports on the Switch

1. Create one VLAN 192 including PC 1 and PC 2.

```
(Netgear Switch) #vlan database
(Netgear Switch) #vlan 192
(Netgear Switch) #vlan routing 192
(Netgear Switch) #exit
(Netgear Switch) #configure
(Netgear Switch) (Config)#interface 1/0/23
(Netgear Switch) (Interface 1/0/23)#vlan pvid 192
(Netgear Switch) (Interface 1/0/23)#vlan participation include 192
(Netgear Switch) (Interface 1/0/23)#exit
(Netgear Switch) (Config)#interface 1/0/24
(Netgear Switch) (Interface 1/0/24)#vlan pvid 192
(Netgear Switch) (Interface 1/0/24)#vlan participation include 192
(Netgear Switch) (Interface 1/0/24)#exit
(Netgear Switch) (Interface-vlan 192)#interface vlan 192
(Netgear Switch) (Interface-vlan 192)#routing
(Netgear Switch) (Interface-vlan 192)#ip address 192.168.1.254 255.255.255.0
(Netgear Switch) (Interface-vlan 192)#exit
```
2. Create one VLAN 202 connected to the Internet.

(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 202
(Netgear Switch) (Vlan)#vlan routing 202
(Netgear Switch) (Vlan)#exit
(Netgear Switch) #configure
(Netgear Switch) (Config)#interface 1/0/48
(Netgear Switch) (Interface 1/0/48)#vlan pvid 202
(Netgear Switch) (Interface 1/0/48)#vlan participation include 202
(Netgear Switch) (Interface 1/0/48)#exit
(Netgear Switch) (Config)#interface vlan 202
(Netgear Switch) (Interface-vlan 202)#routing
(Netgear Switch) (Interface-vlan 202)ip address 10.100.5.34 255.255.255.0
(Netgear Switch) (Interface-vlan 202)#exit

3. Create a DHCP pool to allocated IP addresses to PCs.

(Netgear Switch) (config)#service dhcp
(Netgear Switch) (config)#ip dhcp pool pool-a
(Netgear Switch) (Config-dhcp-pool)#dns-server 12.7.210.170
(Netgear Switch) (Config-dhcp-pool)#default-router 192.168.1.254
(Netgear Switch) (Config-dhcp-pool)#network 192.168.1.0 255.255.255.0
(Netgear Switch) (Config-dhcp-pool)#exit

4. Enable IP routing and configure a default route.

(Netgear Switch) (config)#ip routing
(Netgear Switch) (config)#ip route 0.0.0.0 0.0.0.0 10.100.5.252

5. Enable a protected port on 1/0/23 and 1/0/24.

(Netgear Switch) (Config)#interface 1/0/23
(Netgear Switch) (Interface 1/0/23)#switchport protected
(Netgear Switch) (Interface 1/0/23)#exit
(Netgear Switch) (Config)#interface 1/0/24
(Netgear Switch) (Interface 1/0/24)#switchport protected
(Netgear Switch) (Interface 1/0/24)#exit
Web Interface: Configure a Protected Port to Isolate Ports on the Switch

1. Create a DHCP pool:

   **Note:** This example assumes that the DHCP service is enabled. For information about how to enable the DHCP service, see the Web interface procedure in *Configure a DHCP Server in Dynamic Mode* on page 305.

   a. Select **System > Services > DHCP Server > DHCP Server Configuration**. A screen similar to the following displays.

   ![DHCP Pool Configuration](image)

   b. Under DHCP Pool Configuration, enter the following information:
      * In the **Pool Name** field, select **Create**.
      * In the **Pool Name** field, enter `pool-a`.
      * In the **Type of Binding** field, select **Dynamic**.

   ![DHCP Pool Configuration Details](image)
• In the **Network Number** field, enter **192.168.1.0**.
• In the **Network Mask** field, enter **255.255.255.0**.
• In the **Days** field, enter 1.
• Click **Default Router Addresses**. The DNS server address fields display. In the first **Router Address** field, enter **192.168.1.254**.
• Click **DNS Server Addresses**. The router address fields display. In the first **DNS Server Address** field, enter **12.7.210.170**.

c. Click **Add**.

2. Configure a VLAN and include ports 1/0/23 and 1/0/24 in the VLAN:
   a. Select **Routing > VLAN > VLAN Routing Wizard**.

   A screen similar to the following displays.

   ![VLAN Routing Wizard](image)

   b. Enter the following information:
      • In the **Vlan ID** field, enter **192**.
      • In the **IP Address** field, enter **192.168.1.254**.
      • In the **Network Mask** field, enter **255.255.255.0**.
   c. Click **Unit 1**. The ports display:
      • Click the gray box under port **23** twice until **U** displays.
      • Click the gray box under port **24** twice until **U** displays.

      The **U** specifies that the egress packet is untagged for the port.
   d. Click **Apply** to save the VLAN that includes ports 23 and 24.

3. Configure a VLAN and include port 1/0/48 in the VLAN:
   a. Select **Routing > VLAN > VLAN Routing Wizard**.
A screen similar to the following displays.

b. Enter the following information:
   • In the Vlan ID field, enter 202.
   • In the IP Address field, enter 10.100.5.34.
   • In the Network Mask field, enter 255.255.255.0.

c. Click Unit 1. The ports display:
d. Click the gray box under port 48 twice until U displays. The U specifies that the egress packet is untagged for the port.
e. Click Apply to save the VLAN that includes port 48.

4. Enable IP routing:
a. Select Routing > IP > Basic > IP Configuration.
A screen similar to the following displays.

b. Under IP Configuration, make the following selections:
   • For Routing Mode, select the Enable radio button.
   • For IP Forwarding Mode, select the Enable radio button.
c. Click Apply to enable IP routing.

5. Configure default route for VLAN 202:
a. Select Routing > Routing Table > Basic > Route Configuration.
b. Under Configure Routes, in the Route Type list, select Default Route.

c. In the Next Hop IP Address field, enter 10.100.5.252.

d. Click Add to add the route that is associated to VLAN 202 to the Learned Routes table.

6. Configure port 23 and port 24 as protected ports:

   A screen similar to the following displays.

   b. Under Protected Ports Configuration, click Unit 1. The ports display.

      • Click the gray box under port 23. A check mark displays in the box.

      • Click the gray box under port 24. A check mark displays in the box.

   c. Click Apply to activate ports 23 and 24 as protected ports.

**802.1x Port Security**

This section describes how to configure the 802.1x port security feature on a switch port. IEEE 802.1x authentication prevents unauthorized clients from connecting to a VLAN unless these clients are authorized by the server. 802.1x port security prevent unauthorized clients from connecting to a VLAN. It can be configured on a per-port basis.
The following example shows how to authenticate the dot1x users by a RADIUS server. The management IP address is 10.100.5.33/24. The example is shown as CLI commands and as a Web interface procedure.

**CLI: Authenticating dot1x Users by a RADIUS Server**

1. Assign an IP address to 1/0/19, and set force authorized mode to this port, and create a user name list dot1xList.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#ip routing
(Netgear Switch) (Config)#interface 1/0/1
(Netgear Switch) (Interface 1/0/1)#routing
(Netgear Switch) (Interface 1/0/1)#ip address 192.168.1.1 255.255.255.0
(Netgear Switch) (Config)#dot1x system-auth-control
(Netgear Switch) (Config)#interface 1/0/19
(Netgear Switch) (Interface 1/0/19)#routing
(Netgear Switch) (Interface 1/0/19)#ip address 10.100.5.33 255.255.255.0
(Netgear Switch) (Interface 1/0/19)#dot1x port-control force-authorized
```

2. Use RADIUS to authenticate the dot1x users.

```
(Netgear Switch) (Config)#aaa authentication dot1x default radius
```
3. Configure a RADIUS authentication server.

\[
\text{(Netgear Switch) (Config)#radius server host auth 10.100.5.17} \\
\]

4. Configure the shared secret between the RADIUS client and the server.

\[
\text{(Netgear Switch) (Config)#radius server key auth 10.100.5.17} \\
\text{Enter secret (16 characters max):123456} \\
\text{Re-enter secret:123456} \\
\]

5. Set the RADIUS server as a primary server.

\[
\text{(Netgear Switch) (Config)#radius server msgauth 10.100.5.17} \\
\text{(Netgear Switch) (Config)# radius server primary 10.100.5.17} \\
\]

\[
\text{(Netgear Switch) (Config)#radius accounting mode} \\
\text{(Netgear Switch) (Config)#radius server host acct 10.100.5.17} \\
\]

7. Configure the shared secret between the accounting server and the client.

\[
\text{(Netgear Switch) (Config)#radius server key acct 10.100.5.17} \\
\text{Enter secret (16 characters max):123456} \\
\text{Re-enter secret:123456} \\
\]

**Web Interface: Authenticating dot1x Users by a RADIUS Server**

1. Enable routing for the switch.
   a. Select **Routing > Basic > IP Configuration**.
      
      A screen similar to the following displays.

      ![IP Configuration Screen](image)

      b. For Routing Mode, select the **Enable** radio button.
      c. Click **Apply** to save the settings.
2. Assign IP address 192.168.1.1/24 to the interface 1/0/1.
   a. Select **Routing > Advanced > IP Interface Configuration**.
      
      A screen similar to the following displays.

      ![IP Interface Configuration](image)

      b. Under IP Interface Configuration, scroll down and select the Interface 1/0/1 check box.
         
         Now 1/0/1 appears in the Interface field at the top.
   
   c. Enter the following information:
      
      • In the **IP Address** field, enter **192.168.1.1**.
      • In the **Subnet Mask** field, enter **255.255.255.0**.
      • In the **Routing Mode** field, select **Enable**.
   
   d. Click **Apply** to save the settings.

3. Assign IP address 10.100.5.33/24 to interface 1/0/19:
   a. Select **Routing > Advanced > IP Interface Configuration**.
      
      A screen similar to the following displays.

      ![IP Interface Configuration](image)

      b. Scroll down and select the interface 1/0/19 check box.
         
         Now 1/0/19 appears in the Interface field at the top.
   
   c. Enter the following information:
      
      • In the **IP Address** field, enter **10.100.5.33**.
      • In the **Subnet Mask** field, enter **255.255.255.0**.
      • In the **Routing Mode** field, select **Enable**.
   
   d. Click **Apply** to save the settings.
4. Create an authentication name list.
      A screen similar to the following displays.

      ![Authentication List](image)

      b. Select the check box before dot1xList.
      c. In the 1 list, select Radius.
      d. Click Apply.

5. Set port 1/0/19 to force authorized mode. (In this case, the RADIUS server is connected to this interface.)
      A screen similar to the following displays.

      ![Port Authentication](image)

      b. Scroll down and select the Interface 1/0/19 check box. Now 1/0/19 appears in the Interface field at the top.
      c. In the Control Mode list, select Force Authorized.
      d. Click Apply to save the settings.

6. Enable dot1x on the switch.
A screen similar to the following displays.

b. For Administrative Mode, select the **Enable** radio button.
c. In the **Login** list, select **dot1xList**.
d. Click **Apply** to save settings.

7. Configure the RADIUS authentication server.
   a. Select **Security > Management Security > Server Configuration**.
      
      A screen similar to the following displays.

     b. In the **Server Address** field, enter **10.100.5.17**.
     c. In the **Secret Configured** field, select **Yes**.
     d. In the **Secret** field, enter **123456**.
     e. In the **Primary Server** field, select **Yes**.
     f. In the **Message Authenticator** field, select **Enable**.
     g. Click **Add**.

   a. Select **Security > Management Security > RADIUS > Radius Configuration**.
A screen similar to the following displays.

![Screenshot of RADIUS Configuration](image)

b. In the **Server Address** field, enter **10.100.5.17**.

c. In the **Accounting Mode** field, select **Enable**.

d. Click **Apply**.

9. Configure the accounting server.

   a. Select **Security > Management Security > RADIUS > Radius Accounting Server Configuration**.

   ![Screenshot of Accounting Server Configuration](image)

   b. In the **Accounting Server Address** field, enter **10.100.5.17**.

c. In the **Accounting Mode** field, select **Enable**.

d. Click **Apply**.

**Create a Guest VLAN**

The guest VLAN feature allows a switch to provide a distinguished service to dot1x unaware clients (not rogue users who fail authentication). This feature provides a mechanism to allow visitors and contractors to have network access to reach an external network with no ability to surf the internal LAN.
If a port is in port-based mode, and a client that does not support 802.1X is connected to an unauthorized port that has 802.1X enabled, the client does not respond to the 802.1X requests from the switch. The port remains in the unauthorized state, and the client is not granted access to the network. If the guest VLAN is configured for that port, then the port is placed in the configured guest VLAN and the port is moved to the authorized state, allowing access to the client after a certain amount of time (determined by the guest VLAN period). If the client attached is 802.1x aware, then this allows the client to respond to 802.1X requests from the switch.

For a port in MAC-based mode, if traffic from a unauthenticated client is noticed on a port then, if guest VLAN has been configured on the port, the guest VLAN timer is started for that client. If the client is 802.1x unaware and does not respond to any 802.1x requests, when the guest VLAN timer expires, the client is authenticated and associated with the guest VLAN. This ensures that traffic from the client is accepted and switched through the guest VLAN.

In this example, dot1x is enabled on all the ports so that all the hosts that are authorized are assigned to VLAN 1. On ports 1/0/1 and 1/0/24, guest VLAN is enabled. If guests connect to the port, they are assigned to VLAN 2000, so that guests cannot access the internal VLAN, but can access each other in the guest VLAN.
**CLI: Create a Guest VLAN**

1. Enter the following commands:

   ```bash
   (Netgear Switch) #vlan database
   (Netgear Switch) (Vlan)#vlan 2000
   (Netgear Switch) (Vlan)#exit
   (Netgear Switch) (Config)#interface 1/0/1
   (Netgear Switch) (Interface 1/0/1)#vlan participation include 2000
   (Netgear Switch) (Interface 1/0/1)#exit
   (Netgear Switch) (Config)#interface 1/0/24
   (Netgear Switch) (Interface 1/0/24)#vlan participation include 2000
   (Netgear Switch) (Interface 1/0/24)#exit
   ```

2. Create VLAN 2000, and have 1/0/1 and 1/0/24 as members of VLAN 2000.

   ```bash
   (Netgear Switch) (Config)#aaa authentication dot1x default radius
   (Netgear Switch) (Config)#dot1x system-auth-control
   (Netgear Switch) (Config)#radius server host auth 192.168.0.1
   (Netgear Switch) (Config)#radius server key auth 192.168.0.1
   Enter secret (16 characters max):12345
   Re-enter secret:12345
   (Netgear Switch) (Config)#interface 1/0/6
   (Netgear Switch) (Interface 1/0/6)#dot1x port-control force-authorized
   (Netgear Switch) (Interface 1/0/6)#exit
   (Netgear Switch) (Config)#interface 1/0/12
   (Netgear Switch) (Interface 1/0/12)#dot1x port-control force-authorized
   (Netgear Switch) (Interface 1/0/12)#exit
   ```

3. Enable dot1x and RADIUS on the switch.

   ```bash
   (Netgear Switch) (Config)#interface 1/0/1
   (Netgear Switch) (Interface 1/0/1)#dot1x guest-vlan 2000
   (Netgear Switch) (Interface 1/0/1)#exit
   (Netgear Switch) (Config)#interface 1/0/24
   (Netgear Switch) (Interface 1/0/24)#dot1x guest-vlan 2000
   (Netgear Switch) (Interface 1/0/24)#exit
   ```
4. Enable the guest VLAN on ports 1/0/1 and 1/0/24.

```
(Netgear Switch) #show dot1x detail 1/0/1

VLAN Configuration

- **Reset Configuration**
- **Internal VLAN Configuration**
  - Internal VLAN Allocation Base: 4093
  - Internal VLAN Allocation Policy: Ascending
- **VLAN Configuration**
  - VLAN ID: 2000
  - VLAN Name: 2000
  - VLAN Type: Default
```

b. In the VLAN ID field, enter 2000.
c. In the VLAN Type field, select Static.

d. Click Add.

   a. Select Switching > VLAN > Advanced > VLAN Membership.

   A screen similar to the following displays.

   ![VLAN Membership Screen]

   b. In the VLAN ID list, select 2000.

   c. Click Unit 1. The ports display.

   d. Click the gray boxes under ports 1 and 24 until U displays.

   The U specifies that the egress packet is untagged for the port.

   e. Click Apply.

3. Set force authorized mode on ports 1/0/6 and 1/0/12.

   A screen similar to the following displays.

   ![Port Authentication Screen]

   b. Scroll down and select the Interface 1/0/6 and 1/0/12, check boxes.

   c. In the Control Mode list, select Force Authorized.

   d. Click Apply to save settings.

4. Enable dot1x on the switch.
Make sure that 1/0/12 and 1/0/6 are configured as force authorized before you do this step; otherwise you cannot access the switch through the Web Interface.

a. Select **Security > Port Authentication > Basic > 802.1x Configuration**.
A screen similar to the following displays.

b. For Administrative Mode, select the **Enable** radio button.
c. Click **Apply** to save settings.

5. Configure the dot1x authentication list.

a. Select **Security > Management Security > Authentication List > Dot1x Authentication List**.
A screen similar to the following displays.

b. Select the **defaultList** check box.
c. In the 1 list, select **RADIUS**.
d. Click **Add**.

6. Configure the RADIUS authentication server.

a. Select **Security > Management Security > Radius > Server Configuration**.
A screen similar to the following displays.

b. In the **Radius Server IP Address** field, enter **192.168.0.1**.

c. In the **Secret Configured** field, select **Yes**.

d. In the **Secret** field, enter **12345**.

e. Click **Add**.

7. Configure the guest VLAN.

a. Select **Security > Port Authentication > Advanced > Port Authentication**.

A screen similar to the following displays.

b. Scroll down and select the port 1/0/1 and 1/0/24 check boxes.

c. In the **Guest VLAN ID** field, enter **2000**.

d. Click **Apply** to save your settings.

**Assign VLANs Using RADIUS**

This feature allows the client to connect from any port and be assigned to the appropriate VLAN assigned by the RADIUS server. This gives flexibility for the clients to move around the network without requiring the administrator to do static VLAN configuration. When multiple hosts are connected to the switch on the same port, only one host uses authentication. If any VLAN information is applied on the port based on the authenticated host, the VLAN applies that information to all the hosts that are connected to that port.
After a port is in an authorized state, if any client initiates dot1x authentication, the port clears authenticated clients’ states, and in the process clears the VLAN assigned to the port (if any). Then the port continues with the new client authentication and authorization process.

When a client authenticates itself initially on the network, the switch acts as the authenticator to the clients on the network and forwards the authentication request to the RADIUS server in the network.

For use in VLAN assignment, the following tunnel attributes are used:

- Tunnel-Type = VLAN (13)
- Tunnel-Medium-Type = 802
- Tunnel-Private-Group-ID = VLANID where VLANID is 12 bits, with a value between 1 and 4094.

![Figure 24. VLAN assignment using RADIUS](image)

In the previous figure, the switch has placed the host in the VLAN (vlan2000) based on the user details of the clients.

The configuration on a RADIUS server for a user logged in as admin is:

- Tunnel-Type = VLAN (13)
- Tunnel-Medium-Type = 802
- Tunnel-Private-Group-ID = 2000

### CLI: Assign VLANS Using RADIUS

```
(Netgear Switch) #network protocol none
Changing protocol mode will reset ip configuration.
Are you sure you want to continue? (y/n) y
(Netgear Switch) #network parms 192.168.0.5 255.255.255.0
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 2000
(Netgear Switch) #exit
```
2. Enable dot1x authentication on the switch

   (Netgear Switch) (Config)#dot1x system-auth-control

3. Use the RADIUS as the authenticator.

   (Netgear Switch) (Config)#aaa authentication dot1x default radius

4. Enable the switch to accept VLAN assignment by the RADIUS server.

   (Netgear Switch) (Config)#authorization network radius

5. Set the RADIUS server IP address.

   (Netgear Switch) (Config)#radius server host auth 192.168.0.1

6. Set the NAS-IP address for the RADIUS server.

   (Netgear Switch) (Config)#radius server key auth 192.168.0.1
   Enter secret (16 characters max):12345
   Re-enter secret:12345
   Set the radius server key.
   (Netgear Switch) (Config)#radius server attribute 4 192.168.0.1

7. Force 1/0/6 to be authorized for it to connect to the RADIUS server.

   (Netgear Switch) (Config)#interface 1/0/6
   (Netgear Switch) (Interface 1/0/6)#dot1x port-control force-authorized
   (Netgear Switch) (Interface 1/0/6)#exit
8. Show the dot1x detail for 1/0/5.

```
(Netgear Switch) #show dot1x detail 1/0/5
Port........................................... 1/0/5
Protocol Version............................... 1
PAE Capabilities.............................. Authenticator
Control Mode................................. auto
Authenticator PAE State....................... Authenticated
Backend Authentication State.................. Idle
Quiet Period (secs)............................ 60
Transmit Period (secs)......................... 30

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b. For Current Network Configuration Protocol, select the **None** radio button.

c. In the **IP Address** field, enter **192.168.0.5**.

d. In the **Subnet Mask** field, enter **255.255.255.0**.

e. Click **Apply**.

   a. Select **Switching > VLAN > Basic > VLAN Configuration**.

   A screen similar to the following displays.

   b. In the **VLAN ID** field, enter **2000**.

   c. In the **VLAN Type** field, select **Static**.

   d. Click **Add**.

3. Set force authorized mode on ports 1/0/6 and 1/0/12.
   a. Select **Security > Port Authentication > Advanced > Port Authentication**.
4. Enable dot1x on the switch.

Make sure that 1/0/12 and 1/0/6 are configured as force authorized before you do this step; otherwise, you cannot access the switch through the Web Management Interface.

a. Select Security > Port Authentication > Basic > 802.1x Configuration.

A screen similar to the following displays.

b. For Administrative Mode, select the Enable radio button.

c. For VLAN Assignment Mode, select the Enable radio button.

d. Click Apply to save settings.

5. Configure the dot1x authentication list.

A screen similar to the following displays.

6. Configure the RADIUS authentication server.
      A screen similar to the following displays.

b. In the Radius Server IP Address field, enter 192.168.0.1.
   c. In the Secret Configured field, select Yes.
   d. In the Secret field, enter 12345.
   e. Click Add.

**Dynamic ARP Inspection**

Dynamic ARP inspection (DAI) is a security feature that rejects invalid and malicious ARP packets. The feature prevents a class of man-in-the-middle attacks, where an unfriendly station intercepts traffic for other stations by poisoning the ARP caches of its unsuspecting neighbors. The miscreant sends ARP requests or responses mapping another station’s IP address to its own MAC address.
DAI relies on DHCP snooping. DHCP snooping listens to DHCP message exchanges and builds a bindings database of valid tuples (MAC address, IP address, VLAN interface).

When DAI is enabled, the switch drops ARP packet if the sender MAC address and sender IP address do not match an entry in the DHCP snooping bindings database. However, it can be overcome through static mappings. Static mappings are useful when hosts configure static IP addresses, DHCP snooping cannot be run, or other switches in the network do not run dynamic ARP inspection. A static mapping associates an IP address to a MAC address on a VLAN.

**Figure 25. Dynamic ARP inspection**

**CLI: Configure Dynamic ARP Inspection**

1. Enable DHCP snooping globally.

   \[
   \text{(Netgear Switch) (Config)}\# \text{ip dhcp snooping}
   \]

2. Enable DHCP snooping in a VLAN.

   \[
   \text{(Netgear Switch) (Config)}\# \text{ip dhcp snooping vlan 1}
   \]
3. Configure the port through which the DHCP server is reached as trusted.

```
(Netgear Switch) (Config)# interface 1/0/1
(Netgear Switch) (Interface 1/0/1)# ip dhcp snooping trust
```

4. View the DHCP Snooping Binding table.

```
(GSM7328S) #show ip dhcp snooping binding
Total number of bindings: 1

<table>
<thead>
<tr>
<th>MAC Address</th>
<th>IP Address</th>
<th>VLAN</th>
<th>Interface</th>
<th>Type</th>
<th>Lease (Secs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>00:16:76:A7:88:CC</td>
<td>192.168.10.86</td>
<td>1</td>
<td>1/0/2</td>
<td>DYNAMIC</td>
<td>86400</td>
</tr>
</tbody>
</table>
```

5. Enable ARP inspection in VLAN 1.

```
(Netgear Switch) (Config)# ip arp inspection vlan 1
```

Now all ARP packets received on ports that are members of the VLAN are copied to the CPU for ARP inspection. If there are trusted ports, you can configure them as trusted in the next step. ARP packets received on trusted ports are not copied to the CPU.

6. Configure port 1/0/1 as trusted.

```
(Netgear Switch) (Config)# interface 1/0/1
(Netgear Switch) (Interface 1/0/1)# ip arp inspection trust
```

Now ARP packets from the DHCP client go through because there is a DHCP snooping entry; however ARP packets from the static client are dropped. It can be overcome by static configuration as described in Static Mapping on page 246.

**Web Interface: Configure Dynamic ARP Inspection**

1. Enable DHCP snooping globally.
   a. Select Security > Control > DHCP Snooping Global Configuration.
A screen similar to the following displays.

b. For DHCP Snooping Mode, select the **Enable** radio button.

c. Click **Apply**.

2. Enable DHCP snooping in a VLAN.

   a. Select **Security > Control > DHCP Snooping Global Configuration**.

   A screen similar to the following displays.

   b. In the **VLAN ID** field, enter **1**.

   c. In the **DHCP Snooping Mode** field, select **Enable**.

   A screen similar to the following displays.

3. Configure the port through which the DHCP server is reached as trusted.

   Here interface 1/0/1 is trusted.

   a. Select **Security > Control > DHCP Snooping Interface Configuration**.
A screen similar to the following displays.

![DHCP Snooping Interface Configuration](image)

b. Select the check box for Interface 1/0/1.

c. For Interface 1/0/1, set the Trust Mode as Enable.

d. Click Apply. A screen similar to the following displays.

![DHCP Snooping Interface Configuration](image)

4. View the DHCP Snooping Binding table.
      A screen similar to the following displays.

![DHCP Snooping Binding Configuration](image)

5. Enable ARP Inspection in VLAN 1.
   a. Select Security > Control > Dynamic ARP Inspection > DAI VLAN Configuration.
A screen similar to the following displays.

b. In the VLAN ID field, enter 1.
c. In the Dynamic ARP Inspection field, select Enable.

A screen similar to the following displays.

d. Click Apply.

A screen similar to the following displays.

Now all the ARP packets received on the ports that are member of the VLAN are copied to the CPU for ARP inspection. If there are trusted ports, you can configure them as trusted in the next step. ARP packets received on the trusted ports are not copied to the CPU.
Note: Make sure the administrator PC has a DHCP snooping entry or can access the device through the trusted port for ARP. Otherwise, you might get disconnected from the device.

6. Configure port 1/0/1 as trusted.
   a. Select Security > Control > Dynamic ARP Inspection > DAI Interface Configuration.
   b. Select the Interface 1/0/1 check box.
   c. For the Trust Mode, select Enable.
   d. Click Apply.

   A screen similar to the following displays.

Now ARP packets from the DHCP client will go through; however ARP packets from the static client are dropped, since it does have a DHCP snooping entry. It can be overcome by static configuration as described in the following section, Static Mapping on page 246.

Static Mapping

The example is shown as CLI commands and as a Web interface procedure.

CLI: Configure Static Mapping

1. Create an ARP ACL.

   (Netgear Switch) (Config)# arp access-list ArpFilter

2. Configure the rule to allow the static client.

   (Netgear Switch) (Config-arp-access-list)# permit ip host 192.168.10.2 mac host 00:11:85:ee:54:e9
3. Configure ARP ACL used for VLAN 1.

```bash
(Netgear Switch) (Config)# ip arp inspection filter ArpFilter vlan 1
```

4. Now the ARP packets from the static client will go through since it has an entry in the ARP. ACL ARP packets from the DHCP client is also through since it has a DHCP snooping entry.

This command can include the optional static keyword. If the `static` keyword is given, packets that do not match a permit statement are dropped without consulting the DHCP snooping bindings. In this example, ARP packets from the DHCP client are dropped since it does not have a matching rule, though it has a DHCP snooping entry.

**Web Interface: Configure Static Mapping**

1. Create an ARP ACL.
   a. Select **Security > Control > Dynamic ARP Inspection > DAI ACL Configuration**.
   b. In the **Name** field, enter **ArpFilter**.
   c. Click **Add**.

   A screen similar to the following displays.

2. Configure a rule to allow the static client.
   a. Select **Security > Control > Dynamic ARP Inspection > DAI ACL Rule Configuration**.
   b. In the **ACL Name** list, select **ArpFilter**.
   c. In the **Source IP Address** field, enter **192.168.10.2**.
   d. In the **Source MAC Address** field, enter **00:11:85:EE:54:E9**.
   e. Click **Add**.
A screen similar to the following displays.

3. Configure the ARP ACL used for VLAN 1.
   a. Select Security > Control > Dynamic ARP Inspection > DAI VLAN Configuration.
   b. In the ARP ACL Name field, enter ArpFilter.
   c. Click Apply.

A screen similar to the following displays.

**DHCP Snooping**

DHCP snooping is a security feature that monitors DHCP messages between a DHCP client and DHCP server to filter harmful DHCP message and to build a bindings database of (MAC address, IP address, VLAN ID, port) tuples that are considered authorized. The network administrator enables DHCP snooping globally and on specific VLANs and configures ports within the VLAN to be trusted or untrusted. DHCP servers must be reached through trusted ports.
The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure DHCP Snooping**

1. Enable DHCP snooping globally.

   ```
   (Netgear Switch) (Config)# ip dhcp snooping
   ```

2. Enable DHCP snooping in a VLAN.

   ```
   (Netgear Switch) (Config)# ip dhcp snooping vlan 1
   ```

3. Configure the port through which the DHCP server is reached as trusted.

   ```
   (Netgear Switch) (Config)# interface 1/0/1
   (Netgear Switch) (Interface 1/0/1)# ip dhcp snooping trust
   ```

4. View the DHCP Snooping Binding table.

   ```
   (GSM7328S) #show ip dhcp snooping binding
   Total number of bindings: 1
   
   MAC Address   IP Address       VLAN Interface   Type   Lease (Secs)
   -------------- --------------- ---- --------- ------- --------------
   00:16:76:A7:88:CC  192.168.10.89     1  1/0/2     DYNAMIC   86400
   ```
Web Interface: Configure DHCP Snooping

1. Enable DHCP snooping globally:
   a. Select Security > Control > DHCP Snooping Global Configuration. 
      A screen similar to the following displays.
      ![DHCP Snooping Global Configuration](image1)
   b. For DHCP Snooping Mode, select **Enable**.
   c. Click **Apply**. 
      A screen similar to the following displays:
      ![DHCP Snooping Global Configuration](image2)

2. Enable DHCP snooping in a VLAN.
   a. Select Security > Control > DHCP Snooping Global Configuration. 
      A screen similar to the following displays.
      ![DHCP Snooping Global Configuration](image3)
   b. In the VLAN ID list, select 1.
   c. For DHCP Snooping Mode, select the **Enable** radio button.
A screen similar to the following displays.

![DHCP Snooping Global Configuration](image)

d. Click **Apply**.

3. Configure the port through which DHCP server is reached as trusted.
   a. Select **Security > Control > DHCP Snooping Interface Configuration**.
      A screen similar to the following displays.

      ![DHCP Snooping Interface Configuration](image)

      b. Select the Interface **1/0/1** check box.
      c. For Interface **1/0/1**, in the Trust Mode field, select **Enable**.
      d. Click **Apply**.
      A screen similar to the following displays.

      ![DHCP Snooping Interface Configuration](image)

4. Select **Security > Control > DHCP Snooping Binding Configuration**.
A screen similar to the following displays.

Enter Static Binding into the Binding Database

You can also enter the static binding into the binding database.

**CLI: Enter Static Binding into the Binding Database**

1. Enter the DHCP snooping static binding.

   (Netgear Switch) (Config)# ip dhcp snooping binding 00:11:11:11:11:11
   vlan 1 192.168.10.1 interface 1/0/2

2. Check to make sure the binding database has the static entry.

   (GSM7328S) #show ip dhcp snooping binding
   Total number of bindings: 2
   
<table>
<thead>
<tr>
<th>MAC Address</th>
<th>IP Address</th>
<th>VLAN</th>
<th>Interface</th>
<th>Type</th>
<th>Lease (Secs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>00:11:11:11:11:11</td>
<td>192.168.10.1</td>
<td>1</td>
<td>1/0/2</td>
<td>STATIC</td>
<td></td>
</tr>
<tr>
<td>00:16:76:A7:88:CC</td>
<td>192.168.10.89</td>
<td>1</td>
<td>1/0/2</td>
<td>DYNAMIC</td>
<td>86348</td>
</tr>
</tbody>
</table>
Web Interface: Enter Static Binding into the Binding Database

   A screen similar to the following displays.

2. Fill in the fields for the static binding and click Apply.
3. Check to make sure that the binding database shows the entry in the Static Binding Configuration table.

Maximum Rate of DHCP Messages

To prevent DHCP packets being used as DoS attachments when DHCP snooping is enabled, the snooping application enforces a rate limit for DHCP packets received on untrusted interfaces. DHCP snooping monitors the receive rate on each interface separately. If the receive rate exceeds the configured limit, DHCP snooping brings down the interface. The user must specify “no shutdown” on this interface to further work with that port.

CLI: Configure the Maximum Rate of DHCP Messages

1. Control the maximum rate of DHCP messages.

   (Netgear Switch) (Interface 1/0/2)# ip dhcp snooping limit rate 5
2. View the rate configured.

```
(GSM7328S) #show ip dhcp snooping interfaces 1/0/2

<table>
<thead>
<tr>
<th>Interface</th>
<th>Trust State</th>
<th>Rate Limit (pps)</th>
<th>Burst Interval (seconds)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/0/2</td>
<td>No</td>
<td>5</td>
<td>1</td>
</tr>
</tbody>
</table>
```

**Web Interface: Configure the Maximum Rate of DHCP Messages**

1. Select **Security > Control > DHCP Snooping > Interface Configuration**.
   
   A screen similar to the following displays:

2. Select the interface, fill in the **Rate Limit (pps)** field, and then click **Apply**.
   
The screen shows the new rate limit for the interface.

**IP Source Guard**

IP Source Guard uses the DHCP snooping bindings database. When IP Source Guard is enabled, the switch drops incoming packets that do not match a binding in the bindings database. IP Source Guard can be configured to enforce just the source IP address or both the source IP address and source MAC address.
Figure 27. IP Source Guard

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Dynamic ARP Inspection**

1. Enable DHCP snooping globally.

   `(Netgear Switch) (Config)# ip dhcp snooping`

2. Enable DHCP snooping in a VLAN.

   `(Netgear Switch) (Config)# ip dhcp snooping vlan 1`

3. Configure the port through which the DHCP server is reached as trusted.

   `(Netgear Switch) (Config)# interface 1/0/1`
   `(Netgear Switch) (Interface 1/0/1)# ip dhcp snooping trust`
4. View the DHCP Snooping Binding table.

(GSM7328S) #show ip dhcp snooping binding

Total number of bindings: 1

<table>
<thead>
<tr>
<th>MAC Address</th>
<th>IP Address</th>
<th>VLAN</th>
<th>Interface</th>
<th>Type</th>
<th>Lease (Secs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>00:16:76:A7:88:CC</td>
<td>192.168.10.86</td>
<td>1</td>
<td>1/0/2</td>
<td>DYNAMIC</td>
<td>86400</td>
</tr>
</tbody>
</table>

If the entry does not exist in the DHCP Snooping Binding table, you can add it statically through the `ip verify binding mac-address vlan vlan-id ip-address interface interface-id` command in global configuration mode.

5. Enable IP Source Guard in interface 1/0/2.

(GSM7352Sv2) (Interface 1/0/2)#ip verify source port-security

With this configuration, the device verifies both the source IP address and the source MAC address. If the port-security option is skipped, the device verifies only the source IP address.

**Web Interface: Configure Dynamic ARP Inspection**

1. Enable DHCP snooping globally.
   a. Select Security > Control > DHCP Snooping Global Configuration.
      
      A screen similar to the following displays.

      ![Web Interface Screen]

      b. For DHCP Snooping Mode, select the Enable radio button.
      c. Click Apply.

2. Enable DHCP snooping in a VLAN.
   a. Select Security > Control > DHCP Snooping Global Configuration.
A screen similar to the following displays.

b. In the VLAN Configuration table, in the VLAN ID list, select 1.

c. In the DHCP Snooping Mode field, select Enable.

A screen similar to the following displays.

d. Click Apply.

A screen similar to the following displays.

3. Configure the port through which the DHCP server is reached as trusted. Here interface 1/0/1 is trusted.

a. Select Security > Control > DHCP Snooping Interface Configuration.
b. Select Interface 1/0/1 check box.
c. For interface 1/0/1, in the Trust Mode field, select Enable.
d. Click Apply.

A screen similar to the following displays.

4. View the DHCP Snooping Binding table.

Select Security > Control > DHCP Snooping Binding Configuration.

A screen similar to the following displays.

5. Enable IP source guard in the interface 1/0/2.
   a. Select Security > Control > IP Source Guard > Interface Configuration.
   b. Select the Interface 1/0/2 check box.
   c. For the IPSG mode, select Enable.
   d. Click Apply.
6. Set up IP source guard static binding.
   b. Select the Interface 1/0/2 check box.
   c. In the MAC Address field, enter 00:05:05:05:05:05.
   d. In the VLAN ID field, enter 1.
   e. In the IP Address field, enter 192.168.10.80.
   f. Click Add. A screen similar to the following displays.
This chapter includes the following sections:

- SNTP Concepts
- Show SNTP
- Configure SNTP
- Set the Time Zone
- Set the Named SNTP Server
**SNTP Concepts**

Simple Network Time Protocol (SNTP) can provide the following benefits:

- It can be used to synchronize network resources and for adaptation of NTP.
- SNTP provides synchronized network timestamp.
- It can be used in broadcast or unicast mode.
- It supports SNTP client implemented over UDP, which listens on port 123.

**Show SNTP**

The following are examples of the commands used in the SNTP feature. These examples are provided for the CLI only.

**show snntp**

```
(Netgear Switch Routing) #show snntp?
<cr> Press Enter to execute the command.
client Display SNTP Client Information.
server Display SNTP Server Information.
```

**show snntp client**

```
(Netgear Switch Routing) #show snntp client

Client Supported Modes: unicast broadcast
SNTP Version: 4
Port: 123
Client Mode: unicast
Unicast Poll Interval: 6
Poll Timeout (seconds): 5
Poll Retry: 1
```
show sntp server

(Netgear Switch Routing) #show sntp server

Server IP Address: 81.169.155.234
Server Type: ipv4
Server Stratum: 3
Server Reference Id: NTP Srv: 212.186.110.32
Server Mode: Server
Server Maximum Entries: 3
Server Current Entries: 1

SNTP Servers

Last Update Status: Other
Total Unicast Requests: 1111
Failed Unicast Requests: 361

Configure SNTP

The example is shown as CLI commands and as a Web interface procedure.

CLI: Configure SNTP

NETGEAR switches do not have a built-in real-time clock. However, it is possible to use SNTP to get the time from a public SNTP/NTP server over the Internet. You may need permission from those public time servers. The following steps configure SNTP on the switch:

1. Configure the SNTP server IP address. The IP address can be either from the public NTP server or your own. You can search the Internet to locate the public server. The servers available could be listed in domain-name format instead of address format. In that case, use the ping command on the PC to find the server’s IP address. The following example configures the SNTP server IP address to 208.14.208.19.

(Netgear Switch) (Config)#sntp server 208.14.208.19
2. After configuring the IP address, enable SNTP client mode. The client mode can be either broadcast mode or unicast mode. If the NTP server is not your own, you must use unicast mode.

{(Netgear Switch) (Config)#sntp client mode unicast

3. Once SNTP client mode is enabled, the client waits for the polling interval to send the query to the server. The default value is approximately 1 minute. After this period, issue the `show` command to confirm that the time has been received. The time will be used in all logging messages.

{(Netgear Switch) #show sntp server
Server IP Address: 208.14.208.19
Server Type: ipv4
Server Stratum: 4
Server Reference Id: NTP Srv: 208.14.208.3
Server Mode: Server
Server Maximum Entries: 3
Server Current Entries: 1
SNTP Servers
----------

IP Address: 208.14.208.19
Address Type: IPV4
Priority: 1
Version: 4
Port: 123
Last Update Time: Mar 26 03:36:09 2006
Last Attempt Time: Mar 26 03:36:09 2006
Last Update Status: Success
Total Unicast Requests: 2
Failed Unicast Requests: 0

Web Interface: Configure SNTP

1. Configure the SNTP server.
   a. Select System > Management >Time > SNTP Server Configuration.
A screen similar to the following displays.

b. Enter the following information:
   - In the **Server Type** field, select **IPV4**.
   - In the **Address** field, enter **208.14.208.19**.
   - In the **Port** field, enter **123**.
   - In the **Priority** field, enter **1**.
   - In the **Version** field, enter **4**.

   c. Click **Add**.

2. Configure SNTP globally.
   a. Select **System > Management > Time > SNTP Global Configuration**.
      A screen similar to the following displays.

b. Enter the following information:
   - For Client Mode, Select the **Unicast** radio button.
   - In the **Time Zone Name** field, enter **PST**.
   - In the **Offset Hours** field, enter **-8**.

   c. Click **Apply**.
Set the Time Zone

This example is provided for the CLI only.
The SNTP/NTP server is set to Coordinated Universal Time (UTC) by default. The following example shows how to set the time zone to Pacific Standard Time (PST), which is 8 hours behind GMT/UTC.

(Netgear switch)(config)#clock timezone PST -8

Set the Named SNTP Server

The example is shown as CLI commands and as a Web interface procedure.

CLI: Set the Named SNTP Server

NETGEAR provides SNTP servers accessible by NETGEAR devices. Because NETGEAR might change IP addresses assigned to its time servers, it is best to access an SNTP server by DNS name instead of using a hard-coded IP address. The public time servers available are time-a, time-b, and time-c.

Enable a DNS name server and access a time server with the following commands:

(Netgear switch) (config)#ip domain-lookup
(Netgear switch) (config)#ip name-server 192.168.1.1
(Netgear switch) (config)#sntp server time-a.netgear.com

where 192.168.1.1 is the public network gateway IP address for your device.

This method of setting DNS name look-up can be used for any other applications that require a public IP address, for example, a RADIUS server.

Web Interface: Set the Named SNTP Server

1. Configure the SNTP server.
   a. Select System > Management > Time > SNTP Server Configuration.
A screen similar to the following displays.

b. Enter the following information:
   - In the Server Type list, select DNS.
   - In the Address field, enter time-f.netgear.com
   - In the Port field, enter 123.
   - In the Priority field, enter 1.
   - In the Version field, enter 4.

c. Click Add.

2. Configure the DNS server.
   a. Select System > Management > DNS > DNS Configuration.

   A screen similar to the following displays.

b. Enter the following information:
   - For DNS Status, select the Enable radio button
   - In the DNS Server field, enter 192.168.1.1.

c. Click Add.
Tools

Tools to manage, monitor, and personalize the switch and network

This chapter includes the following sections:

- Traceroute
- Configuration Scripting
- Pre-Login Banner
- Port Mirroring
- Dual Image
- Outbound Telnet
**Traceroute**

This section describes the traceroute feature. Use traceroute to discover routes that packets take when traveling on a hop-by-hop basis to their destination through the network.

- Traceroute maps network routes by sending packets with small time-to-live (TTL) values and watches the ICMP time-out announcements.
- The `traceroute` command displays all L3 devices.
- It can be used to detect issues on the network.
- Traceroute tracks up to 20 hops.
- The default UDP port is used 33343 unless you specify otherwise in the `traceroute` command.

The following shows an example of using the `traceroute` command to determine how many hops there are to the destination. The command output shows each IP address the packet passes through and how long it takes to get there. In this example, the packet takes 16 hops to reach its destination.

**CLI: Traceroute**

```
(Netgear Switch) #traceroute?
<ipaddr> Enter IP address.

(Netgear Switch) #traceroute 216.109.118.74 ?
<cr> Press Enter to execute the command.
<port> Enter port no.

(Netgear Switch) #traceroute 216.109.118.74
tracing route over a maximum of 20 hops
1  10.254.24.1        40 ms       9 ms      10 ms
2  10.254.253.1       30 ms      49 ms      21 ms
3  63.237.23.33       29 ms      10 ms      10 ms
4  63.144.4.1         39 ms      63 ms      67 ms
5  63.144.1.141       70 ms      50 ms      50 ms
6  205.171.21.89      39 ms      70 ms      50 ms
7  205.171.8.154      70 ms      50 ms      70 ms
8  205.171.8.222      70 ms      50 ms      80 ms
9  205.171.251.34     60 ms      90 ms      50 ms
10 209.244.219.181    60 ms      70 ms      70 ms
11 209.244.11.9       60 ms      60 ms      50 ms
12 4.68.121.146       50 ms      70 ms      60 ms
13 4.79.228.2         60 ms      60 ms      60 ms
14 216.115.96.185     110 ms      59 ms      70 ms
15 216.109.120.203    70 ms      66 ms      95 ms
16 216.109.118.74     78 ms     121 ms      69 ms
```
Web Interface: Traceroute

1. Select **Maintenance > Troubleshooting > Traceroute**.
   
   A screen similar to the following displays.

   ![Traceroute Screen](image)

   Use this screen to tell the switch to discover the routes that packets actually take when traveling to their destination through the network on a hop-by-hop basis. Once you click the Apply button, the switch will send three traceroute packets each hop, and the results will be displayed in the result table.

2. In the **IP Address** field, enter **216.109.118.74**.
3. Click **Apply**.

Configuration Scripting

This section provides the following examples:

- **script** on page 270
- **script list and script delete** on page 270
- **script apply running-config.scr** on page 271
- **Create a Configuration Script** on page 271
- **Upload a Configuration Script** on page 271

Configuration scripting:

- Allows you to generate text-formatted files.
- Provides scripts that can be uploaded and downloaded to the system.
- Provides flexibility to create command configuration scripts.
- Can be applied to several switches.
- Can save up to 10 scripts or 500 K of memory.
- Provides script format of one CLI command per line.
Here are some considerations:

- The total number of scripts stored is limited by the NVRAM/FLASH size.
- Application of scripts is partial if a script fails. For example, if the script executes 5 of 10 commands and the script fails, the script stops at 5.
- Scripts cannot be modified or deleted while being applied.
- Validation of scripts checks for syntax errors only. It does not validate that the script will run successfully.

**script**

```bash
(Netgear Switch) #script ?

apply       Applies configuration script to the switch.
delete      Deletes a configuration script file from the switch.
list        Lists all configuration script files present on the switch.
show        Displays the contents of configuration script.
validate    Validate the commands of configuration script.
```

**script list and script delete**

```bash
(Netgear Switch) #script list

<table>
<thead>
<tr>
<th>Configuration Script Name</th>
<th>Size(Bytes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>basic.scr</td>
<td>93</td>
</tr>
<tr>
<td>running-config.scr</td>
<td>3201</td>
</tr>
</tbody>
</table>

2 configuration script(s) found.
1020706 bytes free.

(Netgear Switch) #script delete basic.scr

Are you sure you want to delete the configuration script(s)? (y/n) y

1 configuration script(s) deleted.
script apply running-config.scr

(Netgear Switch) #script apply running-config.scr

Are you sure you want to apply the configuration script? (y/n) y

The system has unsaved changes.
Would you like to save them now? (y/n) y

Configuration Saved!

Create a Configuration Script

(Netgear Switch) #show running-config running-config.scr

Config script created successfully.

(Netgear Switch) #script list

Configuration Script Name    Size(Bytes)
---------------------------------------
running-config.scr           3201

Upload a Configuration Script

(Netgear Switch) #copy nvram: script running-config.scr
tftp://192.168.77.52/running-config.scr

Mode......................... TFTP
Set TFTP Server IP.......... 192.168.77.52
TFTP Path.................... ./
TFTP Filename............... running-config.scr
Data Type................... Config Script
Source Filename............. running-config.scr

Are you sure you want to start? (y/n) y

File transfer operation completed successfully.
Pre-Login Banner

Pre-login banner:
- Allows you to create message screens that display when a user logs in to the CLI.
- By default, no banner file exists.
- You can upload or download.
- File size cannot be larger than 2 K.

The Pre-Login Banner feature is only for the CLI interface.

Create a Pre-Login Banner

This command is provided for the CLI only.

1. On your PC, using Notepad create a banner.txt file that contains the banner to be displayed.

   Login Banner - Unauthorized access is punishable by law.

2. Transfer the file from the PC to the switch using TFTP.

   (Netgear Switch Routing) #copy tftp://192.168.77.52/banner.txt nvram:clibanner

   Mode........................................... TFTP
   Set TFTP Server IP............................. 192.168.77.52
   TFTP Path...................................... ./
   TFTP Filename.................................. banner.txt
   Data Type...................................... Cli Banner

   Are you sure you want to start? (y/n) y

   CLI Banner file transfer operation completed successfully!

   (Netgear Switch Routing)#exit
   (Netgear Switch Routing)>logout

   Login Banner - Unauthorized access is punishable by law.
   User:

   Note: The no clibanner command removes the banner from the switch.
Port Mirroring

The port mirroring feature:

• Allows you to monitor network traffic with an external network analyzer.
• Forwards a copy of each incoming and outgoing packet to a specific port.
• Is used as a diagnostic tool, debugging feature, or means of fending off attacks.
• Assigns a specific port to copy all packets to.
• Allows inbound or outbound packets to switch to their destination and to be copied to the mirrored port.

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Specify the Source (Mirrored) Ports and Destination (Probe)**

```
(Netgear Switch)#config
(Netgear Switch)(Config)#monitor session 1 mode
Enable mirror
(Netgear Switch)(Config)#monitor session 1 source interface 1/0/2
Specify the source interface.
(Netgear Switch)(Config)#monitor session 1 destination interface 1/0/3
Specify the destination interface.
(Netgear Switch)(Config)#exit
(Netgear Switch)#show monitor session 1
Session ID  Admin Mode    Probe Port    Mirrored Port
-------------      ---------------     -------------    ----------------
1                      Enable              1/0/3             1/0/2
```

**Web Interface: Specify the Source (Mirrored) Ports and Destination (Probe)**

1. Select Monitoring > Mirroring > Port Mirroring.

A screen similar to the following displays.
2. Scroll down and select the Source Port 1/0/2 check box. The value 1/0/2 now appears in the Interface field at the top.

3. Enter the following information:
   • In the Destination Port field, enter 1/0/3.
   • In the Session Mode field, select Enable.

4. Click Apply.

**Dual Image**

Traditionally switches contain a single image in the permanent storage. This image is loaded into memory every time there is a reboot. The dual image feature allows switches to have two images in permanent storage. You can denote one of these images as an active image that will be loaded in subsequent reboots and the other image as a backup image. This feature provides for reduced down time for the switches, when the firmware is being upgraded or downgraded.

The images are stored in the file system with the file names *image1* and *image2*. These names are used in the CLI, Web, and SNMP interfaces. Each of the images can be associated with a textual description. The switch provides commands to associate and retrieve the text description for an image. A switch also provides commands to activate the backup image such that it is loaded in subsequent reboots. This activation command makes the current active image as the backup image for subsequent reboots.

On three successive errors executing the *active-image*, the switch attempts to execute the *backup-image*. If there are errors executing the *backup-image* as well, the bootloader will invoke the boot menu.

The Dual Image feature works seamlessly with the stacking feature. All members in the stack must be uniform in their support for the dual Image feature. The Dual Image feature works in the following way in a Stack:

• When an image is activated, the Management node notifies all the participating nodes. All nodes activate the specified image.

• When any node is unable to execute the *active-image* successfully, it attempts to execute the *backup-image*, as mentioned in the section above. Such cases will require user intervention to correct the problem, by using appropriate stacking commands.
CLI: Download a Back up an Image and Make It Active

Web Interface: Download a Backup Image and Make It Active

1. Download a backup image using tftp.
   a. Select Maintenance > Download > File Download.
      A screen similar to the following displays.

      ![Screen shot of File Download](image)

      b. In the File Type list, select Archive.
      c. In the Image Name list, select image2.
      d. In the Transfer Mode list, select TFTP.
      e. In the Server Address Type list, select IPv4.
      f. In the Server Address field, enter 10.100.5.17 (tftp server IP address).
      g. In the Remote File Name, enter gsm73xxse-r8v0m0b3.stk.
      h. Click Apply.

2. Activate image2.
   a. Select Maintenance > File Management > Dual Image Configuration.
A screen similar to the following displays.

b. Under Dual Image Configuration, scroll down and select the Image 2 check box. The image 2 now appears in the Image name field at the top.

c. In the Active Image field, select TRUE.

d. Click Apply.

**Outbound Telnet**

In this section, the following examples are provided:

- **CLI: show network** on page 278
- **CLI: transport output telnet** on page 279
- **Web Interface: Configure Telnet** on page 279
- **CLI: Configure the session-limit and session-timeout** on page 280
- **Web Interface: Configure the Session Timeout** on page 280

Outbound Telnet:

- Establishes an outbound Telnet connection between a device and a remote host.
- A Telnet connection is initiated, each side of the connection is assumed to originate and terminate at a network virtual terminal (NVT).
- Server and user hosts do not maintain information about the characteristics of each other’s terminals and terminal handling conventions.
- Must use a valid IP address.
ProSAFE M4100 Managed Switches

CLI: show network

(Netgear Switch Routing) >telnet 192.168.77.151
Trying 192.168.77.151...
(Netgear Switch Routing)
User: admin
Password:

CLI: show telnet

(Netgear Switch Routing)#show telnet

Outbound Telnet Login Timeout (minutes)....... 5
Maximum Number of Outbound Telnet Sessions..... 5
Allow New Outbound Telnet Sessions............. Yes
CLI: transport output telnet

(Netgear Switch Routing) (Config)#lineconfig ?

<cr> Press Enter to execute the command.

(Netgear Switch Routing) (Config)#lineconfig

(Netgear Switch Routing) (Line)#transport ?

input Displays the protocols to use to connect to a specific line of the router.

output Displays the protocols to use for outgoing connections from a line.

(Netgear Switch Routing) (Line)#transport output ?

telnet Allow or disallow new telnet sessions.

(Netgear Switch Routing) (Line)#transport output telnet ?

<cr> Press Enter to execute the command.

(Netgear Switch Routing) (Line)#transport output telnet

(Netgear Switch Routing) (Line)#

Web Interface: Configure Telnet

A screen similar to the following displays.
2. Under Outbound Telnet, for Admin Mode, select the **Enable** radio button.

3. Click **Apply**.

### CLI: Configure the session-limit and session-timeout

```
(Netgear Switch Routing) (Line)#session-limit ?
<0-5> Configure the maximum number of outbound telnet sessions allowed.

(Netgear Switch Routing) (Line)#session-limit 5

(Netgear Switch Routing) (Line)#session-timeout ?
<1-160> Enter time in minutes.

(Netgear Switch Routing) (Line)#session-timeout 15
```

### Web Interface: Configure the Session Timeout

1. Select **Security > Access > Telnet**.

   A screen similar to the following displays.

2. Enter the following information:
   - In the **Session Timeout** field, enter **15**.
   - In the **Maximum number of sessions** field, enter **5**.

3. Click **Apply**.
This chapter includes the following sections:

- Syslog Concepts
- Show Logging
- Show Logging Buffered
- Show Logging Traplogs
- Show Logging Hosts
- Configure Logging for a Port
- Email Alerting
Syslog Concepts

The syslog feature:

- Allows you to store system messages and errors.
- Can store to local files on the switch or a remote server running a syslog daemon.
- Provides a method of collecting message logs from many systems.

The following illustration explains how to interpret log files.

![Figure 28. Log Files](image)

Show Logging

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Show Logging**

```
(Netgear Switch Routing) #show logging

Logging Client Local Port : 514
CLI Command Logging      : disabled
Console Logging          : disabled
Console Logging Severity Filter : alert
Buffered Logging        : enabled

Syslog Logging           : enabled

Log Messages Received    : 66
Log Messages Dropped     : 0
Log Messages Relayed     : 0
Log Messages Ignored     : 0
```
Web Interface: Show Logging

1. Configure the syslog.
   a. From the main menu, select **Monitoring > Logs > Sys Log Configuration**.
   
   ![Syslog Configuration Screen]
   
   b. In the Syslog Configuration, next to the Admin Status, select the **Enable** radio button.
   c. Click **Apply**.

2. Configure the command log.
   a. Select **Monitoring > Logs > Command Log**.
   
   ![Command Log Configuration Screen]
   
   b. Under Command Log, for Admin Status, select the **Disable** radio button.
   c. Click **Apply**.
3. Configure the console log.
   a. Select Monitoring > Logs > Console Log.

   ![Console Log Configuration Image]

   b. Under Console Log Configuration, for Admin Status, select the **Disable** radio button.
   c. Click **Apply**.

4. Configure the buffer logs.
   a. Select Monitoring > Logs > Buffer Logs.

   A screen similar to the following displays.

   ![Buffer Logs Image]

   b. Under Buffer Logs, for Admin Status, select the **Enable** radio button.
   c. Click **Apply**.
Show Logging Buffered

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Show Logging Buffered**

(Netgear Switch Routing) #show logging buffered ?

<cr> Press Enter to execute the command.

(Netgear Switch Routing) #show logging buffered

Buffered (In-Memory) Logging : enabled
Buffered Logging Wrapping Behavior : On
Buffered Log Count : 66

5   0 days 19:29:57        Multiple Users: Unit: 0     Slot: 3 Port: 1
```

**Web Interface: Show Logging Trap Logs**

Select *Monitoring > Logs > Trap Logs*.
A screen similar to the following displays.
Show Logging Hosts

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Show Logging Hosts**

```
(Netgear Switch Routing) #show logging hosts ?
<cr>                     Press Enter to execute the command.
(Netgear Switch Routing) #show logging hosts

Index     IP Address       Severity   Port     Status
-----  -----------------  ----------  ----  -------------
1      192.168.21.253     critical    514   Active
```

**Web Interface: Show Logging Hosts**

Select Monitoring > Logs > Sys Log Configuration.

A screen similar to the following displays.
Configure Logging for a Port

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Logging for the Port**

```plaintext
(Netgear Switch Routing)  #config
(Netgear Switch Routing) (Config)#logging ?
buffered                   Buffered (In-Memory) Logging Configuration.
cli-command             CLI Command Logging Configuration.
console                Console Logging Configuration.
host                    Enter IP Address for Logging Host
syslog             Syslog Configuration.
(Netgear Switch Routing) (Config)#logging host ?
<hostaddress>             Enter
reconfigure               Logging Host Reconfiguration
remove                Logging Host Removal
(Netgear Switch Routing) (Config)#logging host 192.168.21.253 ?
<cr>             Press Enter to execute the command.
<port>           Enter Port Id
```

```
(Netgear Switch Routing) (Config)#logging host 192.168.21.253 4 ?
<cr>             Press Enter to execute the command.
<severitylevel>  Enter Logging Severity Level (emergency|0, alert|1, critical|2, error|3, warning|4, notice|5, info|6, debug|7).
(Netgear Switch Routing) (Config)#logging host 192.168.21.253 4 1 ?
<cr>             Press Enter to execute the command.
```

```
(Netgear Switch Routing) (Config)#logging host 192.168.21.253 4 1
(Netgear Switch Routing) #show logging hosts

```
Web Interface: Configure Logging for the Port

1. Select **Monitoring > Logs > Sys Log Configuration**. A screen similar to the following displays.

![Syslog Configuration Screen](image)

2. Enter the following information:
   - In the **Host Address** field, enter your host address **192.168.21.253**.
   - In the **Port** field, enter **4**.
   - In the **Severity Filter** list, select **Alert**.

3. Click **Add**.

Email Alerting

Email Alerting is an extension of the logging system. The logging system allows you to configure a set of destinations for log messages. This feature adds the email configuration, through which the log message are sent to a configured SMTP server such that an administrator may receive the log in an email account of their choice.

This feature is enabled globally. When email alerting is enabled, selected log messages are sent to an SMTP server. Log messages are divided into three groups by severity level: urgent, non-urgent, and never.
The network administrator can adjust the urgent and non-urgent severity levels. These levels are global and apply to all destination email addresses. Log messages in the urgent group are sent immediately to the SMTP server with each log message in a separate mail. Log messages in the non-urgent group are batched into a single email message and after a configurable delay.

Email alerting also provides a configuration option that allows the network administrator to specify the severity level at which SNMP traps are logged. Using this option, the administrator can put traps in the urgent group, the non-urgent group, or the never group for emailing. Traps are not emailed by default. For traps to be emailed, the network administrator has to either increase the severity at which traps are logged, or lower the severity level of log messages that are emailed.

The network administrator can configure multiple destination email addresses, and for each email address, specify whether to deliver urgent log messages, non-urgent log messages, or both.

There is an exception to the sending of the messages periodically to the SMTP server. When the log buffer is completely full before the expiry of the periodic timer sending of the log messages to the SMTP server does not until the expiry of the timer. When the log buffer is full, a connection is opened immediately with the SMTP server, and all the messages that have not previously been emailed are sent to it.

**CLI: Send Log Messages to admin@switch.com Using Account aaaa@netgear.com**

1. Configure an SMTP server, for example, smtp.netgear.com. Before you configure the SMTP server, you need to have an account on SMTP server.

```
(Netgear Switch) (Config)#mail-server "smtp.netgear.com" port 465
(Netgear Switch) (Mail-Server)#security tlsv1
(Netgear Switch) (Mail-Server)# username aaaa
(Netgear Switch) (Mail-Server)# password xxxxxx
(Netgear Switch) (Mail-Server)#exit
```
2. Configure logging mail. From-addr is the source address of email and to-addr is the destination address of email.

```
(Netgear Switch) (Config)#logging email
(Netgear Switch) (Config)#logging email from-addr aaaa@netgear.com
(Netgear Switch) (Config)#logging email message-type urgent to-addr admin@switch.com
(Netgear Switch) (Config)#logging email message-type non-urgent to-addr admin@switch.com
```

3. Increase the severity of traps to 3 (error). By default, it is 6 (informational).

```
(Netgear Switch) (Config)#logging traps 3
```
This chapter includes the following sections:

- Add a New Community
- Enable SNMP Trap
- SNMPv3
- sFlow
- Time-Based Sampling of Counters with sFlow
Add a New Community

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Add a New Community**

```
(Netgear switch) #config
(Netgear switch) (Config)#snmp-server community rw public@4
```

**Web Interface: Add a New Community**

1. Select **System > SNMP > SNMP V1/V2 > Community Configuration**. A screen similar to the following displays.

![Community Configuration](image)

2. In the **Community Name** field, enter **public@4**.
3. In the **Client Address** field, enter **0.0.0.0**.
4. In the **Client IP Mask** field, enter **0.0.0.0**.
5. In the **Access Mode** field, select **Read/Write**.
6. In the **Status** field, select **Enable**.
7. Click **Add**.
Enable SNMP Trap

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Enable SNMP Trap**

This example shows how to send SNMP trap to the SNMP server.

```
(Netgear switch) #config
(Netgear switch) (Config)# snmptrap public 10.100.5.17
Enable send trap to SNMP server 10.100.5.17
(Netgear switch) (Config)#snmp-server traps linkmode
Enable send link status to the SNMP server when link status changes.
```

**Web Interface: Enable SNMP Trap**

1. Enable SNMP trap for the server 10.100.5.17.
   a. Select **System > SNMP > SNMP V1/V2 > Trap Configuration**. A screen similar to the following displays.

   ![SNMP Trap Configuration Screen]

   b. In the **Community Name** field, enter **public**.
   c. In the **Version** list, select **SNMPv1**.
   d. In the **Address** field, enter **10.100.5.17**.
   e. In the **Status** field, select **Enable**.
   f. Click the **Add** button.

2. Set the Link Up/Down flag.
a. Select System > SNMP > SNMP V1/V2 > Trap Flags. A screen similar to the following displays.

![SNMP Trap Flags Screen]

b. For Link Up/Down, select the Enable radio button.

c. Click Apply.

SNMPv3

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure SNMPv3**

```
(Netgear Switch) #config
(Netgear Switch) (Config)#users passwd admin
Enter old password: 
Enter new password:12345678
Confirm new password:12345678
Password Changed!
change the password to “12345678”
(Netgear Switch) (Config)#users snmpv3 authentication admin md5
Set the authentication mode to md5
(Netgear Switch) (Config)#users snmpv3 encryption admin des 12345678
Set the encryption mode to des and the key is “12345678”
```

**Web Interface: Configure SNMPv3**

1. Change the user password.

   If you set the authentication mode to MD5, you must make the length of password longer than 8 characters.

b. Under User Management, scroll down and select the User Name admin check box. Now admin appears in the User Name field at the top.

c. In the Password field, enter 12345678.

d. In the Confirm Password field, enter 12345678.

e. Click Apply to save the settings.

2. Configure the SNMP V3 user.

a. Select System > Management > User Configuration. A screen similar to the following displays.

b. In the User Name field, select the admin.

c. For Authentication Protocol, select the MD5 radio button.

d. For Encryption Protocol, select the DES radio button.

e. In the Encryption Key field, enter 12345678.

f. Click Apply to save the settings.

sFlow

sFlow is the standard for monitoring high-speed switched and routed networks. sFlow technology is built into network equipment and gives complete visibility into network activity, enabling effective management and control of network resources.

The sFlow monitoring system consists of an sFlow agent (embedded in a switch or router or in a standalone probe) and a central sFlow collector. The sFlow agent uses sampling
technology to capture traffic statistics from the device it is monitoring. The sFlow datagrams are used to immediately forward the sampled traffic statistics to an sFlow collector for analysis.

The sFlow agent uses two forms of sampling: statistical packet-based sampling of switched or routed packet flows, and time-based sampling of counters.

Figure 30. sFlow

**CLI: Configure Statistical Packet-Based Sampling of Packet Flows with sFlow**

1. Configure the sFlow receiver (sFlow collector) IP address. In this example, sFlow samples will be sent to the destination address 192.168.10.2.

   ```
   (Netgear Switch) (Config)# sflow receiver 1 ip 192.168.10.2
   ```

2. Configure the sFlow receiver timeout. Here sFlow samples will be sent to this receiver for the duration of 31536000 seconds. That is approximately 1 year.

   ```
   (Netgear Switch) (Config)# sflow receiver 1 owner NetMonitor timeout 31536000
   ```
3. Here the default maximum datagram size is 1400. It can be modified to a value between 200 and 9116 using the command `sflow receiver 1 maxdatagram <size>`.

```
(GSM7328S) #show sflow receivers
Receiver Owner    Time out   Max Datagram Port  IP Address
Index    String              Size
-------- -------- ---------- ------------ ----- ------------------------------
1        NetMonit 31535988   1400         6343  192.168.10.2
2                 0          1400         6343  0.0.0.0
3                 0          1400         6343  0.0.0.0
4                 0          1400         6343  0.0.0.0
5                 0          1400         6343  0.0.0.0
6                 0          1400         6343  0.0.0.0
7                 0          1400         6343  0.0.0.0
8                 0          1400         6343  0.0.0.0
```

4. Configure the sampling port sFlow receiver index, sampling rate, and sampling maximum header size. You need to repeat these for all the ports to be sampled.

```
(Netgear Switch) (Config)# interface 1/0/1
(Netgear Switch) (Interface 1/0/1)# sflow sampler 1
(Netgear Switch) (Interface 1/0/1)# sflow sampler rate 1024
(Netgear Switch) (Interface 1/0/1)# sflow sampler maxheadersize 64
```

5. View the sampling port configurations.

```
(GSM7328S) #show sflow samplers
Sampler            Receiver                Packet         Max Header
Data Source        Index                 Sampling Rate       Size
-----------       ---------------     -----------------  ------------------
1/0/1                     1               1024                 64
```

**Web Interface: Configure Statistical Packet-based Sampling with sFlow**

1. Configure the sFlow receiver IP address.
   a. Select Monitoring > sFlow > Advanced > sFlow Receiver Configuration.
   b. Select the 1 check box.
   c. In the Receiver Owner field, enter NetMonitor.
   d. In the Receiver Timeout field, enter 31536000.
e. In the **Receiver Address** field, enter **192.168.10.2**. A screen similar to the following displays.

f. Click **Apply**. A screen similar to the following displays.

2. Configure the sampling ports sFlow receiver index, sampling rate, and sampling maximum header size.
   a. Select **Monitoring > sFlow > Advanced > sFlow Interface Configuration**. A screen similar to the following displays.

   b. Select the Interface **1/0/1** check box.
   c. In the **Sampling Rate** field, enter **1024**.
   d. In the **Maximum Header Size** field, enter **64**.
   e. Click **Apply**. A screen similar to the following displays.
Time-Based Sampling of Counters with sFlow

CLI: Configure Time-Based Sampling of Counters with sFlow

1. Configure the sampling port sFlow receiver index, and polling interval. You need to repeat this for all the ports to be polled.

```
(Netgear Switch) (Config)# interface 1/0/1
(Netgear Switch) (Interface 1/0/1)# sflow poller 1
(Netgear Switch) (Interface 1/0/1)# sflow poller interval 300
```

2. View the polling port configurations.

```
(GSM7328S) #show sflow pollers
Poller                  Receiver          Poller
Data Source       Index               Interval
-----------              ---------             --------
1/0/1                       1                   300
```

Web Interface: Configure Time-Based Sampling of Counters with sFlow

Configure the sampling ports sFlow receiver index, and polling interval:

4. Select the Interface 1/0/1 check box.
5. In the Poller Interval field, enter 300.

A screen similar to the following displays.

6. Click Apply.
This chapter includes the following sections:

- *DNS Concepts*
- *Specify Two DNS Servers*
- *Manually Add a Host Name and an IP Address*
DNS Concepts

This section describes the Domain Name System (DNS) feature. The DNS protocol maps a host name to an IP address, allowing you to replace the IP address with the host name for IP commands such as a ping and a traceroute, and for features such as RADIUS, DHCP relay, SNTP, SNMP, TFTP, SYSLOG, and UDP relay.

You can obtain the DNS server IP address from your ISP or public DNS server list. DNS is used to resolve the host’s IP address. It enables a static host name entry to be used to resolve the IP address. The following are examples of how the DNS feature is used.

Specify Two DNS Servers

The following example shows how to specify two DNS servers (that is, two IP addresses for DNS servers) and to resolve an IP address using the DNS server. The example is shown as CLI commands and as a Web interface procedure.

CLI: Specify Two DNS Servers

```
(Netgear Switch)#config
(Netgear Switch) (Config)#ip name-server 12.7.210.170 219.141.140.10
(Netgear Switch) (Config)#ip domain-lookup
(Netgear Switch) (Config)#exit
(Netgear Switch)#ping www.netgear.com
Send count=3, Receive count=3 from 206.82.202.46
```

Web Interface: Specify Two DNS Servers

1. Select System > Management > DNS > DNS Configuration.

A screen similar to the following displays.
2. Under DNS Server Configuration, in the **DNS Server** field, enter **12.7.210.170**.

3. Click **Add**.

4. In the **DNS Server** field, enter **219.141.140.10**.

5. Click **Add**.

Both DNS servers now show in the DNS Server Configuration table.

**Manually Add a Host Name and an IP Address**

The following example shows commands to add a static host name entry to the switch so that you can use this entry to resolve the IP address. The example is shown as CLI commands and as a Web interface procedure.

**CLI: Manually Add a Host Name and an IP Address**

```
(Netgear Switch)#config
(Netgear Switch) (Config)#ip host www.netgear.com 206.82.202.46
(Netgear Switch) (Config)#ip domain-lookup
(Netgear Switch) (Config)#ping www.netgear.com
Send count=3, Receive count=3 from 206.82.202.46
```

**Web Interface: Manually Add a Host Name and an IP Address**

1. Select **System > Management > DNS > Host Configuration**.

A screen similar to the following displays.

2. Under DNS Host Configuration, enter the following information:
   - In the **Host Name** field, enter **www.netgear.com**.
   - In the **IP Address** field, enter **206.82.202.46**.

3. Click **Add**.

The host name and IP address now show in the DNS Host Configuration table.
DHCP Server

Dynamic Host Configuration Protocol Server

This chapter includes the following sections:

- DHCP Server Concepts
- Configure a DHCP Server in Dynamic Mode
- Configure a DHCP Server that Assigns a Fixed IP Address
DHCP Server Concepts

When a client sends a request to a DHCP server, the DHCP server assigns the IP address from address pools that are specified on the switch. The network in the DHCP pool must belong to the same subnet.

DHCP server allows the switch to dynamically assign an IP address to a DHCP client that is attached to the switch. It also enables the IP address to be assigned based on the client’s MAC address. The following are examples of how the DHCP Server feature is used.

Configure a DHCP Server in Dynamic Mode

The following example shows how to create a DHCP server with a dynamic pool. The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure a DHCP Server in Dynamic Mode**

```
(Netgear Switch) #vlan database
(Netgear Switch) (Vlan)#vlan 200
(Netgear Switch) (Vlan)#vlan routing 200
(Netgear Switch) (Vlan)#exit
(Netgear Switch) (Config)#interface 1/0/1
(Netgear Switch) (Interface 1/0/1)#vlan participation include 200
(Netgear Switch) (Interface 1/0/1)#vlan pvid 200
(Netgear Switch) (Interface 1/0/1)#exit
(Netgear Switch) (Config)#interface vlan 200
(Netgear Switch) (Interface-vlan 200)#routing
(Netgear Switch) (Interface-vlan 200)#ip address 192.168.100.1 255.255.255.0
(Netgear Switch) #config
(Netgear Switch) (Config)#service dhcp
(Netgear Switch) (Config)#ip dhcp pool pool_dynamic
(Netgear Switch) (Config)#network 192.168.100.0 255.255.255.0
```

**Note:** If there is no DHCP L3 relay between client PC and DHCP server, there must be an active route whose subnet is the same as the DHCP dynamic pool’s subnet.
Web Interface: Configure a DHCP Server in Dynamic Mode

1. Create VLAN 200.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**.
      A screen similar to the following displays.

      ![VLAN Configuration Screen](image)

      b. Under VLAN Configuration, in the **VLAN ID** field, enter **200**.
      c. Click **Add**.

2. Add port 1/0/1 to VLAN 200.
   a. Select **Switching > VLAN >Advanced > VLAN Membership**.
      A screen similar to the following displays.

      ![VLAN Membership Screen](image)

      b. In the **VLAN ID** field, select **200**.
      c. Click **Unit 1**. The ports display.
      d. Click the gray boxes under ports **1** and **24** until **U** displays.
         The U specifies that the egress packet is untagged for the port.
      e. Click **Apply**.

3. Assign PVID to the VLAN 200.
   a. Select **Switching > VLAN> Advanced > Port PVID Configuration**.
A screen similar to the following displays.

b. Under Port PVID Configuration, scroll down and select the 1/0/1 check box.

c. In the PVID (1 to 4093) field, enter 200.

d. Click Apply to save the settings.

4. Create a new DHCP pool.

a. Select System > Services > DHCP Server > DHCP Server Configuration.

A screen similar to the following displays.

b. For Admin Mode, select the Enable radio button.

c. Click Apply to enable the DHCP service.

d. Select System > Services > DHCP Server > DHCP Pool Configuration.
A screen similar to the following displays.

```
DHCP Pool Configuration

Pool Name: pool_dynamic
Pool Name: pool_dynamic
Type of Binding: Dynamic
Network Address: 192.168.100.0
Network Mask: 255.255.255.0
Network Prefix Length: 24
Client Name: 
Hardware Address: 00:00:00:00:00:00
Hardware Address Type: Ethernet
Client ID: 
Host Number: 0.0.0.0
Host Mask: 0.0.0.0
Host Prefix Length: 0

DHCP Pool Configuration

Pool Name: pool_dynamic
Pool Name: pool_dynamic
Type of Binding: Dynamic
Network Address: 192.168.100.0
Network Mask: 255.255.255.0
Network Prefix Length: 24
Client Name: 
Hardware Address: 00:00:00:00:00:00
Hardware Address Type: Ethernet
Client ID: 
Host Number: 0.0.0.0
Host Mask: 0.0.0.0
Host Prefix Length: 0
```

e. Under DHCP Pool Configuration, enter the following information:
   • In the Pool Name list, select Create.
   • In the Pool Name field, enter pool_dynamic.
   • In the Type of Binding list, select Dynamic.
   • In the Network Number field, enter 192.168.100.0.
   • In the Network Mask field, enter 255.255.255.0. As an alternate, you can enter 24 in the Network Prefix Length field. Do not fill in both the Network Mask field and Network Prefix Length fields.
   • In the Days field, enter 1.

f. Click Add.

The pool_dynamic name is now added to the Pool Name drop-down list.

### Configure a DHCP Server that Assigns a Fixed IP Address

The following example shows how to set up a DHCP server with an IP address pool and let the DHCP server assign a fixed IP address based on a MAC address. The example is shown as CLI commands and as a Web interface procedure.
CLI: Configure a DHCP Server that Assigns Fixed IP Address

```
(Netgear Switch)#config
(Netgear Switch) (Config)#service dhcp
(Netgear Switch) (Config)#ip dhcp pool pool_manual
(Netgear Switch) (Config)#client-name dhcpclient
(Netgear Switch) (Config)#hardware-address 00:01:02:03:04:05
(Netgear Switch) (Config)#host 192.168.200.1 255.255.255.0
(Netgear Switch) (Config)#client-identifier 01:00:01:02:03:04:05
```

**Note:** The unique identifier is a concatenation of the media type and MAC addresses. For example, the Microsoft client identifier for Ethernet address c8:19:24:88:f1:77 is 01:c8:19:24:88:f1:77, where 01 represents the Ethernet media type. For more information, see the “Address Resolution Protocol Parameters” section of RFC 1700.

Web Interface: Configure a DHCP Server that Assigns a Fixed IP Address

1. Select **System > Services > DHCP Server > DHCP Server Configuration**.
   
   A screen similar to the following displays.

2. For Admin Mode, select the **Enable** radio button.
3. Click **Apply** to enable the DHCP service.
4. Select **System > Services > DHCP Server > DHCP Pool Configuration**.
A screen similar to the following displays.

5. Under DHCP Pool Configuration, enter the following information:
   - In the Pool Name list, select Create.
   - In the Pool Name field, enter pool_manual.
   - In the Type of Binding list, select Manual.
   - In the Client Name field, enter dhcpclient.
   - In the Hardware Address field, enter 00:01:02:03:04:05.
   - In the Hardware Type list, select ethernet.
   - In the Host Number field, enter 192.168.200.1.
   - In the Network Mask field, enter 255.255.255.0. As an alternate, you can enter 24 in the Network Prefix Length field.
   - In the Days field, enter 1.

6. Click Add. The pool_manual name is now added to the Pool Name drop-down list.
This chapter includes the following sections:

- *Double VLANs*
- *Private VLAN Groups* on page 316
Double VLANs

This section describes how to enable the double DVLAN feature. Double VLANs pass traffic from one customer domain to another through the metro core. Custom VLAN IDs are preserved and a provider service VLAN ID is added to the traffic so the traffic can pass the metro core in a simple and cost-effective manner. You can use VLANs to specify customer ports and a service provider port. In this example, the switches have the same configuration.

Figure 31. Double VLANS

The following example shows how to configure the NETGEAR switch shown in the preceding figure to add a double VLAN tag for traffic going from the subnet domain connected to port 1/0/24. This example assumes there is a Layer 2 switch connecting all these devices in your domain. The Layer 2 switch tags the packet going to the NETGEAR switch port 1/0/24. The example is shown as CLI commands and as a Web interface procedure.
**CLI: Enable a Double VLAN**

Create a VLAN 200.
(Netgear Switch)#vlan database
(Netgear Switch) (Vlan)#vlan 200
(Netgear Switch) (Vlan)#exit

Add interface 1/0/24 to VLAN 200, add pvid 200 to port.
(Netgear Switch) #config
(Netgear Switch) (Config)#interface 1/0/24
(Netgear Switch) (Interface 1/0/24)#vlan pvid 200
(Netgear Switch) (Interface 1/0/24)#vlan participation include 200
(Netgear Switch) (Interface 1/0/24)#exit

Add interface 1/0/48 to the VLAN 200 in a tagging mode.
(Netgear Switch) (Config)#interface 1/0/48
(Netgear Switch) (Interface 1/0/48)#vlan participation include 200
(Netgear Switch) (Interface 1/0/48)#vlan tagging 200
(Netgear Switch) (Interface 1/0/48)#exit

Select interface 1/0/48 as the provider port.
(Netgear Switch) (Config)#
(Netgear Switch) (Config)#interface 1/0/48
(Netgear Switch) (Interface 1/0/48)#mode dvlan-tunnel
(Netgear Switch) (Interface 1/0/48)#exit

**Web Interface: Enable a Double VLAN**

1. Create static VLAN 200:
   a. Select **Switching > VLAN > Basic > VLAN Configuration**. A screen similar to the following displays.
b. Under VLAN Configuration, enter the following information:
   • In the VLAN ID field, enter 200.
   • In the VLAN Name field, enter vlan200.
   • In the VLAN Type field, select Static.

c. Click Add.

2. Add ports 24 and 48 to VLAN 200.
   a. Select Switching > VLAN > Advanced > VLAN Membership. A screen similar to the following displays.

   ![VLAN Membership Screen]

   b. Under VLAN Membership, in the VLAN ID field, select 200.
   c. Click Unit 1. The ports display:
      • Click the gray box under port 24 twice until U displays. The U specifies that the egress packet is untagged for the port.
      • Click the gray box under port 48 once until T displays. The T specifies that the egress packet is tagged for the port.
   d. Click Apply to save the settings.

3. Change the port VLAN ID (PVID) of port 24 to 200:
   a. Select Switching > VLAN > Advanced > Port PVID Configuration. A screen similar to the following displays.
b. Scroll down and select the Interface 1/0/24 check box. Now 1/0/24 appears in the Interface field at the top.

c. In the PVID (1 to 4093) field, enter 200.

d. Click Apply to save the settings.

4. Configure port 48 as the provider service port:

   a. Select Switching > VLAN > Advanced > Port DVLAN Configuration. A screen similar to the following displays.

   b. Scroll down and select the Interface 1/0/48 check box. Now 1/0/48 appears in the Interface field at the top.

   c. In the Admin Mode field, select Enable.

   d. Click Apply to save the settings.
Private VLAN Groups

The private VLAN group allows you to create groups of users within a VLAN that cannot communicate with members in different groups but only within the same group. There are two modes for the private group. The mode can be either isolated or community. When in isolated mode, the member port in the group cannot forward its egress traffic to any other members in the same group. The default mode is community, in which each member port can forward traffic to other members in the same group, but not to members in other groups. The following examples show how to create a private group.

The following example creates two groups. Group 1 is in community mode, and Group 2 is in isolated mode.

![Diagram of Private VLAN groups in community mode and isolated mode]

Figure 32. Private VLAN groups in community mode and isolated mode
CLI: Create a Private VLAN Group

1. Enter the following commands.

```
(Netgear Switch) #
(Netgear Switch) #vlan data
(Netgear Switch) (Vlan)#vlan 200
(Netgear Switch) (Vlan)#exit

(Netgear Switch) #config
(Netgear Switch) (Config)#interface 1/0/6
(Netgear Switch) (Interface 1/0/6)#vlan participation include 200
(Netgear Switch) (Interface 1/0/6)#vlan pvid 200
(Netgear Switch) (Interface 1/0/6)#exit

(Netgear Switch) (Config)#interface 1/0/7
(Netgear Switch) (Interface 1/0/7)#vlan participation include 200
(Netgear Switch) (Interface 1/0/7)#vlan pvid 200
(Netgear Switch) (Interface 1/0/7)#exit

(Netgear Switch) (Config)#interface 1/0/16
(Netgear Switch) (Interface 1/0/16)#vlan participation include 200
(Netgear Switch) (Interface 1/0/16)#vlan participation pvid 200
(Netgear Switch) (Interface 1/0/16)#exit

(Netgear Switch) (Config)#interface 1/0/17
(Netgear Switch) (Interface 1/0/17)#vlan participation include 200
(Netgear Switch) (Interface 1/0/17)#vlan pvid 200
(Netgear Switch) (Interface 1/0/17)#exit
```

2. Create a VLAN 200 and include 1/0/6, 1/0/7, 1/0/16, and 1/0/17.

```
(Netgear Switch) (Config)#
(Netgear Switch) (Config)#private-group name group1 1 mode community
```

3. Create a private group in community mode.

```
(Netgear Switch) (Config)#private-group name group2 2 mode isolated
```

4. Create a private group in isolated mode.

```
(Netgear Switch) (Config)#interface range 1/0/6-1/0/7
(Netgear Switch) (conf-if-range-1/0/6-1/0/7)#switchport private-group 1
(Netgear Switch) (conf-if-range-1/0/6-1/0/7)#exit
```
5. Add 1/0/16 and 1/0/7 to the private group 1.

(Netgear Switch) (Config)#interface range 1/0/16-1/0/17
(Netgear Switch) (conf-if-range-1/0/16-1/0/17)#switchport private-group 2

6. Add 1/0/16 and 1/0/7 to the private group 2.

(Netgear Switch) (conf-if-range-1/0/16-1/0/17)#exit

Web Interface: Create a Private VLAN Group

1. Create VLAN 200.
   a. Select **Switching > VLAN > Basic > VLAN Configuration**. A screen similar to the following displays.

   ![VLAN Configuration Screen](image)

   b. Enter the following information:
      - In the **VLAN ID** field, enter **200**.
      - In the **VLAN Name** field, enter **VLAN200**.
      - In the **VLAN Type** field, select **Static**.
   c. Click **Add**.

2. Add ports 1/0/6, 1/0/7, 1/0/16, and 1/0/17 to VLAN 200.
   a. Select **Switching > VLAN > Advanced > VLAN Membership**. A screen similar to the following displays.

   ![VLAN Membership Screen](image)
b. Under VLAN Membership, in the VLAN ID list, select 200.

c. Click Unit 1. The ports display.

d. Click the gray boxes under ports 6, 7, 16 and 17 until U displays. The U specifies that the egress packet is untagged for the port.

e. Click Apply.

3. Specify the PVID on ports 1/0/6, 1/0/7, 1/0/16, and 1/0/17.

a. Select Switching > VLAN > Advanced > Port PVID Configuration. A screen similar to the following displays.

b. Under PVID Configuration, scroll down and select the Interface 1/0/6, 1/0/7, 1/0/16, and 1/0/17 check boxes.

c. In the PVID (1 to 4093) field, enter 200.

d. In the Acceptable Frame Type list, select Admit All.

e. Click Apply to save the settings.

4. Create a private group, group1.

b. In the Group Name field, enter group1.

c. In the Group ID field, enter 1.

d. In the Group Mode list, select community.
e. Click Add.

5. Add port 6 and 7 to group1.
   a. Select Security > Traffic Control > Private Group VLAN > Private Group Membership. A screen similar to the following displays.

   ![Private Group Membership](image)

   b. In the Group ID list, select 1.
   c. Click Unit 1. The ports display.
   d. Click the gray boxes under ports 6 and 7. A check mark displays in each box.
   e. Click Apply.

6. Create a private group, group2.
   a. Select Security > Traffic Control > Private Group VLAN > Private Group Configuration. A screen similar to the following displays.

   ![Private Group Configuration](image)

   b. In the Group Name field, enter group2.
   c. In the Group ID field, enter 2.
   d. In the Group Mode field, select isolated.
   e. Click Add.

7. Add ports 16 and 17 to group2.
a. Select **Security > Traffic Control > Private Group VLAN > Private Group VLAN > Private Group Membership**. A screen similar to the following displays.

![Private Group Membership Screen](image)

b. In the **Group ID** list, select 2.
c. Click **Unit 2**. The ports display.
d. Click the gray boxes under ports 16 and 17, and a check mark displays in each box.
e. Click **Apply**.
This chapter includes the following sections:

- **SPT Concepts**
- **Configure Classic STP (802.1d)**
- **Configure Rapid STP (802.1w)**
- **Configure Multiple STP (802.1s)**
SPT Concepts

The purpose of Spanning Tree is to eliminate loops in the switch system. There are three STPs: Classic STP (802.1d), Rapid STP (RSTP, 802.1w), and Multiple STP (MSTP, 802.1s).

While STP can take 30 to 50 seconds to respond to a topology change, RSTP is typically able to respond to changes within a few seconds. RSTP can revert back to 802.1d in order to interoperate with legacy bridges on a per-port basis. This drops the benefits it introduces.

In Multiple Spanning Tree Protocol (MSTP), each Spanning Tree instance can contain several VLANs. Each Spanning Tree instance is independent of other instances. This approach provides multiple forwarding paths for data traffic, enabling load balancing, and reducing the number of Spanning Tree instances required to support a large number of VLANs.

Configure Classic STP (802.1d)

The example is shown as CLI commands and as a Web interface procedure.

CLI: Configure Classic STP (802.1d)

```
(Netgear Switch) (Config)# spanning-tree
(Netgear Switch) (Config)# spanning-tree forceversion 802.1d
(Netgear switch) (Interface 1/0/3)# spanning-tree port mode
```

Web Interface: Configure Classic STP (802.1d)

1. Enable 802.1d on the switch.
   a. Select Switching > STP > STP Configuration.
      A screen similar to the following displays.
b. Enter the following information:
   • For Spanning Tree Admin Mode, select the **Enable** radio button.
   • For Force Protocol Version, select the **IEEE 802.1d** radio button.

c. Click **Apply**.

2. Configure the CST port.
   a. Select **Switching > STP > CST Port Configuration**.

   A screen similar to the following displays.

   ![CST Port Configuration Screen]

   b. Under CST Port Configuration, scroll down and select the Interface 1/0/3 check box.
   Now 1/0/3 appears in the Interface field at the top.

c. In the **Port Mode** field, select **Enable**.

d. Click **Apply**.

### Configure Rapid STP (802.1w)

The example is shown as CLI commands and as a Web interface procedure.

#### CLI: Configure Rapid STP (802.1w)

```bash
(Netgear switch) (Config)# spanning-tree
(Netgear switch) (Config)# spanning-tree forceversion 802.1w
(Netgear switch) (Interface 1/0/3)# spanning-tree port mode
```

#### Web Interface: Configure Rapid STP (802.1w)

1. Enable 802.1w on the switch:
   a. Select **Switching > STP > STP Configuration**.
b. Enter the following information:
   • For Spanning Tree Admin Mode, select the Enable radio button.
   • For Force Protocol Version, select the IEEE 802.1w radio button.

c. Click Apply.

2. Configure the CST port.
   a. Select Switching > STP > CST Port Configuration.
   
   A screen similar to the following displays.

b. Under CST Port Configuration, scroll down and select the Interface 1/0/3 check box.
   Now 1/0/3 appears in the Interface field at the top.

c. In the Port Mode field, select Enable.

d. Click Apply.
Configure Multiple STP (802.1s)

The example is shown as CLI commands and as a Web interface procedure.

**CLI: Configure Multiple STP (802.1s)**

(Netgear switch) (Config)# spanning-tree
(Netgear switch) (Config)# spanning-tree forceversion 802.1s
(Netgear switch) (Config)# spanning-tree mst instance 1
Create a mst instance 1
(Netgear switch) (Config)# spanning-tree mst priority 1 4096
(Netgear switch) (Config)# spanning-tree mst vlan 1 2
(Netgear switch) (Config)# spanning-tree mst vlan 1 3
Associate the mst instance 1 with the VLAN 2 and 3
(Netgear switch) (Config)# spanning-tree mst instance 2
Create a mst instance 2
(Netgear switch) (Config)# spanning-tree mst priority 2 4096
(Netgear switch) (Config)# spanning-tree mst vlan 2 11
(Netgear switch) (Config)# spanning-tree mst vlan 2 12
Associate the mst instance 2 with the VLAN 11 and 12
(Netgear switch) (Interface 1/0/3)# spanning-tree mst 1 port-priority 128
(Netgear switch) (Interface 1/0/3)# spanning-tree mst 1 cost 0

**Web Interface: Configure Multiple STP (802.1s)**

1. Enable 802.1s on the switch.
   a. Select **Switching > STP > STP Configuration**.

A screen similar to the following displays.

![Web Interface STP Configuration](image-url)
b. Enter the following information:
   • For Spanning Tree Admin Mode, select the **Enable** radio button.
   • For Force Protocol Version, select the **IEEE 802.1s** radio button.

   c. Click **Apply**.

2. Configure MST.
   a. Select **Switching > STP > MST Configuration**.
      
      A screen similar to the following displays.
      
      ![MST Configuration Screen]

      b. Configure MST ID 1.
         • In the **MST ID** field, enter 1.
         • In the **Priority** field, enter 4096.
         • In the **VLAN Id** field, enter 2.
         • Click **Add**.
         • In the **VLAN Id** field, enter 3.
         • Click **Apply**.

      c. Configure MST ID 2.
         • In the **MST ID** field, enter 2.
         • In the **Priority** field, enter 4096.
         • In the **VLAN Id** field, enter 11.
         • Click **Add**.
         • In the **VLAN Id** field, enter 12.
         • Click **Apply**.

3. Configure the MST port.
   a. Select **Switching > STP > MST Port Status**.
A screen similar to the following displays.

4. Under MST Port Configuration, scroll down and select the Interface 1/0/3 check box. Now 1/0/3 appears in the Interface field at the top.

5. Enter the following information:
   - In the Port Priority field, enter 128.
   - In the Port Path Cost field, enter 0.

6. Click Apply.
This chapter includes the following sections:

- DHCP L2 Relay
- DHCP L3 Relay
DHCP L2 Relay

DHCP relay agents eliminate the need to have a DHCP server on each physical network. Relay agents populate the `giaddr` field and also append the `Relay Agent Information` option to the DHCP messages. DHCP servers use this option for IP addresses and other parameter assignment policies. These DHCP relay agents are typically IP routing-aware devices and are referred to as Layer 3 relay agents.

In some network configurations, there is a need for Layer 2 devices to append the relay agent Information option as they are closer to the end hosts.

![Diagram of DHCP L2 Relay](image)

**Figure 33. DHCP L2 Relay**

These Layer 2 devices typically operate only as bridges for the network and might not have an IPv4 address on the network. Lacking a valid IPv4 source address, they cannot relay IPv4 packets directly to a DHCP server located on another network. These Layer 2 devices append the Relay agent information option and broadcast the DHCP message. This section provides information about where a Layer 2 relay agent fits in and how it is used.

**CLI: Enable DHCP L2 Relay**

1. Enter the following commands:

```bash
(Netgear Switch)#vlan database
(Netgear Switch)(Vlan)#vlan 200
(Netgear Switch)(Vlan)#exit
```
2. Enable the DHCP L2 relay on the switch.

```
(Netgear Switch) (Config)#dhcp l2relay
(Netgear Switch) (Config)#dhcp l2relay vlan 200
```

3. Enable the Option 82 Circuit ID field.

```
(Netgear Switch) (Config)#dhcp l2relay circuit-id vlan 200
```

4. Enable the Option 82 Remote ID field.

```
(Netgear Switch) (Config)#dhcp l2relay remote-id rem_id vlan 200
```

5. Enable DHCP L2 relay on port 1/0/4.

```
(Netgear Switch) (Config)#interface 1/0/4
(Netgear Switch) (Interface 1/0/4)# dhcp l2relay
(Netgear Switch) (Interface 1/0/4)# vlan pvid 200
(Netgear Switch) (Interface 1/0/4)# vlan participation include 200
(Netgear Switch) (Interface 1/0/4)# exit
```

6. Enable DHCP L2 relay on port 1/0/5.

```
(Netgear Switch) (Config)#interface 1/0/5
(Netgear Switch) (Interface 1/0/5)# dhcp l2relay
(Netgear Switch) (Interface 1/0/5)# vlan pvid 200
(Netgear Switch) (Interface 1/0/5)# vlan participation include 200
(Netgear Switch) (Interface 1/0/5)# exit
```

7. Enable DHCP L2 relay on port 1/0/6.

```
(Netgear Switch) (Config)#interface 1/0/6
(Netgear Switch) (Interface 1/0/6)# dhcp l2relay
```

8. Trust packets with option 82 received on port 1/0/6.

```
(Netgear Switch) (Interface 1/0/6)# dhcp l2relay trust
(Netgear Switch) (Interface 1/0/6)# vlan pvid 200
(Netgear Switch) (Interface 1/0/6)# vlan participation include 200
(Netgear Switch) (Interface 1/0/6)# exit
```
Web Interface: Enable DHCP L2 Relay

1. Create VLAN 200.
   a. Select Switching > VLAN > Basic > VLAN Configuration.
      A screen similar to the following displays.

       ![VLAN Configuration Screen](image1)

       b. In the VLAN ID field, enter **200**.
       c. In the VLAN Type field, select **Static**.
       d. Click Add.

2. Add ports to VLAN 200.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays.

       ![VLAN Membership Screen](image2)

       b. In the VLAN ID field, select **200**.
       c. Click **Unit 1**. The ports display.
       d. Click the gray boxes under ports **4**, **5**, and **6** until **U** displays.
          The U specifies that the egress packet is untagged for the port.
       e. Click **Apply**.

3. Specify the PVID on ports 1/0/4, 1/0/5 and 1/0/6.
   a. Select Switching > VLAN > Advanced > Port PVID Configuration.
A screen similar to the following displays.

b. Scroll down and select the Interface 1/0/4, 1/0/5, and 1/0/6 check boxes.

c. In the PVID (1 to 4093) field, enter 200.

d. Click Apply to save the settings.

4. Enable DHCP L2 relay on VLAN 200.
   a. Select System > Services > DHCP L2 Relay > DHCP L2 Relay Configuration.

   A screen similar to the following displays.

b. For Admin Mode, select the Enable radio button.

c. Scroll down and select the VLAN ID 200 check box.

d. Enter the following information:
   • In the Admin Mode field, select Enable.
   • In the Circuit ID Mode field, select Enable.
   • In the Remote ID String field, enter rmt_id.

e. Click Apply to save the settings.

5. Enable DHCP L2 Relay on interfaces 1/0/4, 1/0/5, and 1/0/6.
   a. Select System > Services > DHCP L2 Relay > DHCP L2 Relay Interface Configuration.
A screen similar to the following displays.

b. Scroll down and select the 1/0/4, 1/0/5, and 1/0/6 check boxes.
c. In the Admin Mode field, select Enable.
d. Click Apply to save the settings.

   a. Select System > Services > DHCP L2 Relay > DHCP L2 Relay Interface Configuration.

A screen similar to the following displays.

b. Under DHCP L2 Relay Configuration, scroll down and select the Interface 1/0/6 check box.
c. In the 82 Option Trust Mode field, select Enable.
d. Click Apply to save the settings.
DHCP L3 Relay

This case has two steps, DHCP server configuration and DHCP L3 relay configuration. This example shows how to configure a DHCP L3 relay on a NETGEAR switch and how to configure DHCP pool to assign IP addresses to DHCP clients using DHCP L3 relay.

Configure the DHCP Server Switch

CLI: Configure a DHCP Server

1. Enable routing on the switch.

```
(Netgear Switch) #config
(Netgear Switch) (Config)#ip routing
(Netgear Switch) (Config)#
```
2. Create a routing interface and enable RIP on it so that the DHCP server learns the route 10.200.1.0/24 from the DHCP L3 relay.

   (Netgear Switch) (Config)#interface 1/0/3
   (Netgear Switch) (Interface 1/0/3)#routing
   (Netgear Switch) (Interface 1/0/3)#ip address 10.100.1.1 255.255.255.0
   (Netgear Switch) (Interface 1/0/3)#ip rip
   (Netgear Switch) (Interface 1/0/3)#exit

3. Create a DHCP pool.

   (Netgear Switch) (Config)#ip dhcp pool dhcp_server
   (Netgear Switch) (Config-dhcp-pool)#network 10.200.1.0 255.255.255.0
   (Netgear Switch) (Config-dhcp-pool)#exit
   (Netgear Switch) (Config)#ip dhcp pool dhcp_server_second
   (Netgear Switch) (Config-dhcp-pool)#network 10.200.2.0 255.255.255.0
   (Netgear Switch) (Config-dhcp-pool)#exit
   (Netgear Switch) (Config)#service dhcp
   (Netgear Switch) (Config)#exit

4. Exclude the IP address 10.200.1.1 and 10.200.2.1 from the DHCP pool because it has been used on the DHCP L3 relay.

   (Netgear Switch) (Config)#ip dhcp excluded-address 10.200.1.1
   (Netgear Switch) (Config)#ip dhcp excluded-address 10.200.2.1

Web Interface: Configure a DHCP Server

1. Enable routing mode on the switch.
   a. Select Routing > IP > Basic > IP Configuration.
      A screen similar to the following displays.

   b. For Routing Mode, select the Enable radio button.
   c. Click Apply.
2. Create a routing interface and assign 10.100.1.1/24 to it.
   a. Select **Routing > IP > Advanced > IP Interface Configuration**.
      A screen similar to the following displays.

      ![IP Interface Configuration](image)

      b. Scroll down and select the **1/0/3** check box.
      c. In the **IP Address** field, enter **10.100.1.1**.
      d. In the **Subnet Mask** field, enter **255.255.255.0**.
      e. In the **Routing Mode** field, select **Enable**.
      f. Click **Apply** to save the settings.

3. Enable RIP on interface 1/0/3.
   a. Select **Routing > RIP > Advanced > Interface Configuration**.
      A screen similar to the following displays.

      ![Interface Configuration](image)

      b. In the **Interface** field, select **1/0/3**.
      c. For RIP Admin Mode, select the **Enable** radio button.
      d. Click **Apply** to save the settings.

4. Set up the DHCP global configuration.
   a. Select **System > Services > DHCP Server > DHCP Server Configuration**.
A screen similar to the following displays.

![DHCP Server Configuration](image)

b. For Admin Mode, select the **Enable** radio button.

c. In the **IP Range From** field, enter **10.200.1.1**.

d. In the **IP Range To** field, enter **10.200.1.1**.

e. Click **Add**.

5. Exclude 10.200.2.1 from the DHCP pool.

a. Select **System > Services > DHCP Server > DHCP Server Configuration**.

A screen similar to the following displays:

![DHCP Server Configuration](image)

b. In the **IP Range From** field, enter **10.200.2.1**.

c. In the **IP Range To** field, enter **10.200.2.1**.

d. Click **Add**.

6. Create a DHCP pool named dhcp_server.

a. Select **System > Services > DHCP Server > DHCP Pool Configuration**.
A screen similar to the following displays.

b. Under DHCP Pool Configuration, enter the following information:
   - In the Pool Name list, select Create.
   - In the Pool Name field, enter dhcp_server.
   - In the Type of Binding list, select Dynamic.
   - In the Network Number field, enter 10.200.1.0.
   - In the Network Mask field, enter 255.255.255.0. As an alternate, you can enter 24 in the Network Prefix Length field.

   **Note:** Do not fill in the Network Mask field and Network Prefix Length field at the same time.

c. Click Add. The pool_dynamic name is now added to the Pool Name drop-down list.

7. Create a DHCP pool named dhcp_server_second.
   a. Select System > Services > DHCP Server > DHCP Pool Configuration.

   A screen similar to the following displays.
b. Under DHCP Pool Configuration, enter the following information:
   • In the Pool Name list, select Create.
   • In the Pool Name field, enter dhcp_server_second.
   • In the Type of Binding list, select Dynamic.
   • In the Network Number field, enter 10.200.2.0.
   • In the Network Mask field, enter 255.255.255.0. As an alternate, you can enter 24 in the Network Prefix Length field.

   c. Click Add. The dhcp_server_second name is now added to the Pool Name drop-down list.

Configure a DHCP L3 Switch

CLI: Configure a DHCP L3 Relay

1. Enable routing on the switch.

   ```
   (Netgear Switch) #config
   (Netgear Switch) (Config)#ip routing
   (Netgear Switch) (Config)#
   ```

2. Create a routing interface and enable RIP on it.

   ```
   (Netgear Switch) (Config)#
   (Netgear Switch) (Config)#interface 1/0/4
   (Netgear Switch) (Interface 1/0/4)#routing
   (Netgear Switch) (Interface 1/0/4)#ip address 10.100.1.2 255.255.255.0
   (Netgear Switch) (Interface 1/0/4)#ip rip
   (Netgear Switch) (Interface 1/0/4)#exit
   ```

3. Create a routing interface connecting to the client.

   ```
   (Netgear Switch) (Config)#
   (Netgear Switch) (Config)#interface 1/0/16
   (Netgear Switch) (Interface 1/0/16)#routing
   (Netgear Switch) (Interface 1/0/16)#ip address 10.200.2.1 255.255.255.0
   (Netgear Switch) (Interface 1/0/16)#exit
   ```

4. Configure the DHCP Server IP address and enable the DHCP L3 relay.

   ```
   (Netgear Switch) (Config)#ip helper-address 10.100.1.1 dhcp
   (Netgear Switch) (Config)#ip helper enable
   ```
5. Redistribute 10.200.1.0/24 and 10.200.2.0/24 to the RIP such that RIP advertises this route to the DHCP server.

(Netgear Switch) (Config)#
(Netgear Switch) (Config)#router rip
(Netgear Switch) (Config-router)#redistribute connected
(Netgear Switch) (Config-router)#exit

Web Interface: Configure a DHCP L3 Relay

1. Enable routing mode on the switch.
   a. Select Routing > IP > Basic > IP Configuration.
      A screen similar to the following displays.

      ![IP Configuration Screen]

      b. For Routing Mode, select the Enable radio button.
      c. Click Apply.

2. Create a routing interface and assign 10.100.1.2/24 to it.
   a. Select Routing > IP > Advanced > IP Interface Configuration.
      A screen similar to the following displays.

      ![IP Interface Configuration Screen]

      b. Scroll down and select the Port 1/0/4 check box.
      c. In the IP Address field, enter 10.100.1.2.
      d. In the Subnet Mask field, enter 255.255.255.0.
e. In the **Routing Mode** field, select **Enable**.
f. Click **Apply** to save the settings.

3. Enable RIP on interface 1/0/4.
   a. Select **Routing > RIP > Advanced > Interface Configuration**.
      
      A screen similar to the following displays.

      ![Interface Configuration Screen](image)

      b. In the **Interface** list, select **1/0/4**.
      c. For RIP Admin Mode, select the **Enable** radio button.
      d. Click **Apply** to save the settings.

4. Create a routing interface and assign 10.200.1.1/24 to it.
   a. Select **Routing > IP > Advanced > IP Interface Configuration**.
      
      A screen similar to the following displays.

      ![IP Interface Configuration Screen](image)

      b. Under IP Interface Configuration, scroll down and select the Port **1/0/15** check box.
      c. In the **IP Address Configuration Method** field, enter **Manual**.
      d. In the **IP Address** field, enter **10.200.1.1**.
      e. In the **Subnet Mask** field, enter **255.255.255.0**.
      f. In the **Routing Mode** field, select **Enable**.
      g. Click **Apply** to save the settings.

5. Create a routing interface and assign 10.200.2.1/24 to it.
   a. Select **Routing > IP > Advanced > IP Interface Configuration**.
      
      ![IP Interface Configuration Screen](image)
DHCP L2 Relay and L3 Relay

A screen similar to the following displays.

b. Under IP Interface Configuration, scroll down and select the Port 1/0/16 check box.

c. In the IP Address Configuration Method field, enter **Manual**.

d. In the IP Address field, enter **10.200.2.1**.

e. In the Subnet Mask field, enter **255.255.255.0**.

f. In the Routing Mode field, select **Enable**.

g. Click **Apply** to save the settings.

6. Redistribute the connected routes to RIP.

   a. Select **Routing > RIP > Advanced > Route Redistribution**.  

   A screen similar to the following displays.

   b. In the **Source** field, select **Connected**.

   c. In the **Redistribute Mode** field, select **Enable**.

   d. Click **Apply** to save the settings.

7. Enable DHCP L3 relay.

   a. Select **System > Services > DHCP Relay**.
A screen similar to the following displays.

8. Configure the DHCP server IP address.
   a. Select **System > Services > UDP Relay**.

   A screen similar to the following displays.

   b. In the **Server Address** field, enter **10.100.1.1**.
   c. In the **UDP Port** field, enter **dhcp**.
   d. Click **Add** to save the settings.
MLD Snooping

Multicast Listener Discovery

This chapter includes the following sections:

• Multicast Listener Discovery Concepts
• MLD Snooping Concepts
• CLI: Configure MLD Snooping
• Web Interface: Configure MLD Snooping
Multicast Listener Discovery Concepts

Multicast Listener Discovery (MLD) protocol enables IPv6 routers to discover multicast listeners, the nodes that are configured to receive multicast data packets, on its directly attached interfaces. The protocol specifically discovers which multicast addresses are of interest to its neighboring nodes and provides this information to the active multicast routing protocol that makes decisions on the flow of multicast data packets.

Periodically, the multicast router sends general queries requesting multicast address listener information from systems on an attached network. These queries are used to build and refresh the multicast address listener state on the attached networks. In response to the queries, multicast listeners reply with membership reports. These membership reports specify their multicast addresses listener state and their desired set of sources with current-state multicast address records.

The multicast router also processes unsolicited filter-mode-change records and source-list-change records from systems that want to indicate interest in receiving or not receiving traffic from particular sources.

MLD Snooping Concepts

In IPv4, Layer 2 switches can use IGMP snooping to limit the flooding of multicast traffic by dynamically configuring Layer 2 interfaces so that multicast traffic is forwarded to only those interfaces associated with IP multicast address. In IPv6, MLD snooping performs a similar function. With MLD snooping, IPv6 multicast data is selectively forwarded to a list of ports that want to receive the data, instead of being flooded to all ports in a VLAN. This list is constructed by snooping IPv6 multicast control packets.

MLD is a protocol used by IPv6 multicast routers to discover the presence of multicast listeners (nodes configured to receive IPv6 multicast packets) on its directly attached links and to discover which multicast packets are of interest to neighboring nodes. MLD is derived from IGMP; MLD version 1 (MLDv1) is equivalent to IGMPv2, and MLD version 2 (MLDv2) is equivalent to IGMPv3. MLD is a subprotocol of Internet Control Message Protocol version 6 (ICMPv6), and MLD messages are a subset of ICMPv6 messages, identified in IPv6 packets by a preceding Next Header value of 58.

The switch can snoop on both MLDv1 and MLDv2 protocol packets and bridge IPv6 multicast data based on destination IPv6 multicast MAC addresses. The switch can be configured to perform MLD snooping and IGMP snooping simultaneously.
CLI: Configure MLD Snooping

1. Enter the following commands.

   (Netgear Switch) #vlan da
   (Netgear Switch) (Vlan)#vlan 300
   (Netgear Switch) (Vlan)#exit
   (Netgear Switch) #config
   (Netgear Switch) (Config)#interface 1/0/1
   (Netgear Switch) (Interface 1/0/1)#vlan participation include 300
   (Netgear Switch) (Interface 1/0/1)#vlan pvid 300
   (Netgear Switch) (Interface 1/0/1)#exit
   (Netgear Switch) (Config)#interface 1/0/24
   (Netgear Switch) (Interface 1/0/24)#vlan participation include 300
   (Netgear Switch) (Interface 1/0/24)#vlan pvid 300
   (Netgear Switch) (Interface 1/0/24)#exit
   (Netgear Switch) (Config)#set mld
   (Netgear Switch) (Config)#exit
   (Netgear Switch) #vlan database
   (Netgear Switch) (Vlan)#set mld 300
   (Netgear Switch) (Vlan)#exit

2. Enable MLD snooping on VLAN 300.

   (Netgear Switch) #show mldsnooping
   Admin Mode..................................... Enable
   Multicast Control Frame Count............... 0
   Interfaces Enabled for MLD Snooping........ None
   VLANs enabled for MLD snooping.............. 300
   (Netgear Switch) #

Web Interface: Configure MLD Snooping

1. Create VLAN 300.
   a. Select Switching > VLAN > Basic > VLAN Configuration.
A screen similar to the following displays.

2. Assign all of the ports to VLAN 300.
   a. Select Switching > VLAN > Advanced > VLAN Membership.
      A screen similar to the following displays.

      b. In the VLAN ID list, select 300.
      c. Click Unit 1. The ports display.
      d. Click the gray boxes under ports 1 and 24 until U displays.
         The U specifies that the egress packet is untagged for the port.
      e. Click Apply.

3. Assign PVID to ports 1/0/1 and 1/0/24.
   a. Select Switching > VLAN > Advanced > Port PVID Configuration.
A screen similar to the following displays.

b. Scroll down and select the interface 1/0/1 and 1/0/24 check boxes.

c. In the PVID (1 to 4093) field, enter 300.

d. Click Apply to save the settings.

4. Enable MLD snooping on the switch.

a. Select Routing > Multicast > MLD Snooping > Configuration.

A screen similar to the following displays.

b. For MLD Snooping Admin Mode, select the Enable radio button.

c. Click Apply.

5. Enable MLD snooping on the VLAN 300.

a. Select Routing > Multicast > MLD Snooping > MLD VLAN Configuration.

A screen similar to the following displays.
b. Enter the following information:
   • In the VLAN ID field, enter 300.
   • In the Admin Mode field, select Enable.
6. Click Add.
