Wireless Router MBR1517v2

Front and Rear Views

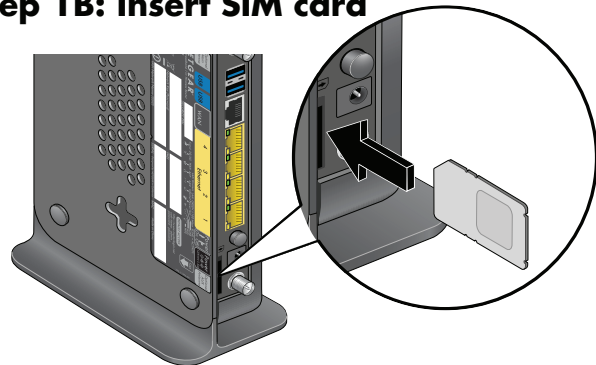

Step 1: Prepare the Router

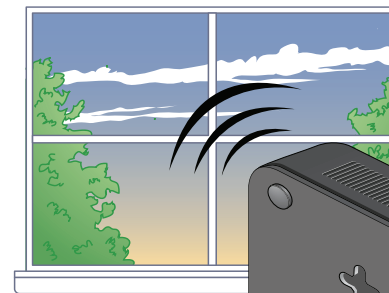

Step 1A: Orient the antennas

Step 1B: Insert SIM card

Step 2: Locate router for good mobile broadband signal

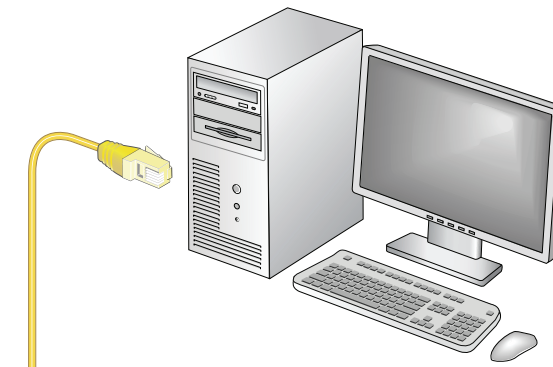

Step 3: Connect the Power

Wait for unit to power up

Step 4: Connect to a computer

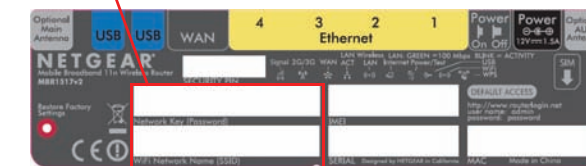

Step 4A: Connect via Ethernet cable

Step 4B: Connect via WiFi

Location of WiFi SSID and Passphrase

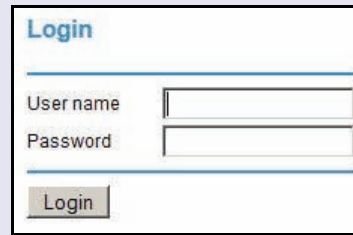

(installation continued on back page)

Installation (continued from front page)

Step 5: Set Up Internet Access

1. Open a Web browser, type <http://www.routerlogin.net>, and press **Enter**. The router will automatically use the default configuration process.
2. Enter the router User Name **admin** and default Password **password**, and then click **Login**.

3. At the top of the router page is the signal strength indicator. Place the router at a location with the best signal strength (generally by a window). Your router is now connected to the Internet.

4. You can set up your wireless (WiFi) network right away or wait until later.

FAQs

- For a strong Internet connection, where should I locate my mobile broadband router when I connect it to the router?
For Internet coverage, check with your ISP to find out what its service areas are. When positioning the mobile broadband router, place it near a window.
- How do I join the router's wireless (WiFi) network?
 - On your WiFi computer or device (iPhone, gaming device), open the software that manages your WiFi connection.

- Look for your WiFi network—the SSID and passphrase are now pre-configured and is printed on bottom of your router.
- Select it, and connect.
- For a WPS (WiFi Protected Setup) connection—NETGEAR calls this Push 'N' Connect—press the WPS button on the router. It looks like .

Within 2 minutes, follow the software instructions on your WiFi device to complete the WPS process.

Troubleshooting

What should I do if the router does not connect to the Internet?

- Check with your ISP to ensure there is good coverage in the area.
- Ensure your mobile broadband account is active.
- Ensure the SIM card is inserted properly into the router.
- Locate the router near the window or other area of the building.
- Log in to the router menu and check your router's Internet configuration. Check that the user name, password, and APN with ISP are set correctly. If you use a PIN to connect to the Internet, make sure it is entered correctly.
- If there is coverage in your area, installing an external antenna may improve the signal quality. Refer to the User Manual on how to install the antenna.

The router Internet indicator  is on, but I cannot access the internet using WiFi.

- Check your WiFi connection.
- For help with troubleshooting WiFi connections, log in to the router menu using Ethernet and click the link to the online User Manual.

Technical Support

Thank you for selecting NETGEAR products.

After installing your device, locate the serial number on the label of your product and use it to register your product at <https://my.netgear.com>. You must register your product before you can use NETGEAR telephone support. NETGEAR recommends registering your product through the NETGEAR web site. For product updates and web support, visit <http://support.netgear.com>. NETGEAR recommends that you use only the official NETGEAR support resources.

WARNING: Do not stack equipment, or place equipment in tight spaces, or in drawers. Be sure your equipment is surrounded by at least 5 centimeters of air space.
