

WGE111

54 Mbps Wireless Game Adapter

- *Help is there when you need it! NETGEAR provides 24x7 technical support* in English, with selected local language support during office hours.*

● **Link your game console to a wireless network, eliminating a tangle of wires**

As networking technology continues to evolve, the needs for a wireless network continue to expand to a wider variety of home applications. A home user may wish to link one or more gaming consoles to their wireless network to partake in Internet or LAN gaming, but would like to avoid a tangle of cables spread across their home.

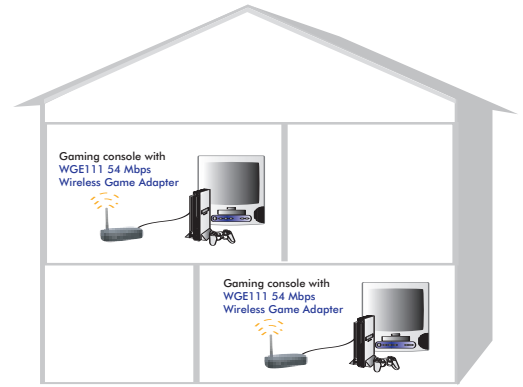

The NETGEAR WGE111 54 Mbps Wireless Game Adapter offers the perfect solution. It can be attached to a game console's Ethernet port to link to console to a wireless network for Internet gaming. For LAN (AdHoc) gaming, two WGE111 or more units can be used to link two game consoles to each other, without a wireless router even being needed – ideal for LAN parties. An external switch allows users to easily select between Internet and AdHoc modes, and the WGE111 is interoperable with 802.11b and 802.11g devices.

- Convenient** ● Link your game console to a wireless network, avoiding a tangle of unsightly cables in your home. An external switch allows users to easily select between Internet and LAN gaming options. In the LAN (AdHoc) environment, a WGE111 can connect a game console to other WGE111 units without the presence of a wireless network

- Compact** ● Small, sleek casing comes equipped with a stand to allow for vertical placement. Compact size makes carrying to LAN parties and gaming events easy.
