

WGX102

54 Mbps Wall-Plugged Wireless Range Extender

- *Help is there when you need it! NETGEAR provides 24x7 technical support* in English, with selected local language support during office hours.*

● Receive Wireless Internet Access from any Power Outlet in Your Home

As home networking continues to spread and evolve at rapid speed, some users find that their wireless router does not reach all corners of their home, or that they would like to have their wireless network originate from a point of their choosing, rather than be tethered to the point where the Internet enters their home. Other users would rather have a wireless network where no product is on the floor, and no cables are visible at all.

The WGX102 54 Mbps Wall-Plugged Wireless Range Extender allows users to have their wireless network originate from the middle of their home, or from the furthest extremity, with no visible cables. The WGX102 can be plugged into any electrical outlet to create an area of wireless access. The XE102 Wall-Plugged Ethernet Bridge connects to an existing wired or wireless router from any vendor. The XE102 is sold separately.

- **Novel** Plug the WGX102 Wireless Range-Extender into any power outlet to receive wireless access at the desired location that you choose.

- **Attractive** The new wall-plugged form factor allows users a full wireless network without occupying any floor or desk space, or any visible cables. The sleek platinum casing blends well into any home décor.
