Hardware Setup

This chapter covers the following topics:

• Unpack your cable modem
• Front panel and LEDs
• Rear panel
• Label
• System requirements
• Install and activate your Cable Modem

For more information about the topics covered in this manual, visit the support website at support.netgear.com.
Unpack your cable modem

Your package contains the following items.

1. High Speed Cable Modem
2. Ethernet cable
3. Power adapter

Figure 1. Package contents
Front panel and LEDs

The cable modem provides status LEDs on the front.

You can use the LEDs to verify status and connections. The following table lists and describes each LED on the cable modem.
Table 1. LED descriptions

<table>
<thead>
<tr>
<th>LED</th>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
</table>
| Power | ![Power Icon] | • **Solid green.** Power is supplied to the cable modem.  
• **Off.** No power is supplied to the cable modem.  
• **Solid red.** The cable modem is too warm and might overheat. For more information about this condition, see Use LEDs to troubleshoot on page 23. |
| Downstream | ![Downstream Icon] | • **Solid amber.** One downstream channel is locked.  
• **Solid green.** Two or more downstream channels are locked.  
• **Blinking green.** The cable modem is scanning for a downstream channel.  
• **Off.** No downstream channel is locked. |
| Upstream | ![Upstream Icon] | • **Solid amber.** One upstream channel is locked.  
• **Solid green.** Two or more upstream channels are locked.  
• **Blinking green.** The cable modem is scanning for an upstream channel.  
• **Off.** No upstream channel is locked. |
| Online | ![Online Icon] | • **Solid green.** The cable modem is online.  
• **Blinking green.** The cable modem is synchronizing with the cable provider’s cable modem termination system (CMTS).  
• **Off.** The cable modem is offline. |
| Ethernet | ![Ethernet Icon] | • **Solid green.** A powered-on device is connected to the LAN port at 1000 Mbps.  
• **Solid amber.** A powered-on device is connected to the LAN port at 10 Mbps or 100 Mbps.  
• **Off.** No device is connected to the LAN port.  
• **Blinking green or amber.** The LAN port is processing traffic. |

**Rear panel**

The connections and button on the rear panel are shown in the following figure.
Viewed from top to bottom, the back panel contains the following components:

- **Reset button.** Pressing the **Reset** button resets the cable modem. If the **Reset** button is pressed for at least seven seconds, the Power LED blinks green and the cable modem returns to its factory settings.

- **Ethernet port.** For installation and activation, connect a computer to the Ethernet port. After you install the cable modem and activate your Internet service, you can disconnect the computer and connect a router to this port.

- **Coaxial cable port.** Connect the cable port to a cable wall outlet.

- **Power On/Off button.** Press the **Power On/Off** button to provide power to the cable modem.

- **DC power connector.** Connect the power adapter that came in the product package to the DC power connector.
Label

The cable modem label shows the login information, MAC address, and serial number.

Figure 4. Cable modem label

System requirements

You need the following to install your cable modem:

- **Compatible operating system:**
  - Windows 10
  - Windows 8
  - Windows 7
  - Windows Vista
  - Windows XP
  - Windows 2000
  - Mac OS
  - Other operating systems running a TCP/IP network

- **Compatible web browser:**
  - Microsoft Internet Explorer 5.0 or later
  - Firefox 2.0 or later
  - Safari 1.4 or later
  - Google Chrome 11.0 or later

- **Cable broadband Internet service**
Install and activate your Cable Modem

The cable modem provides a connection between your cable Internet provider’s network and your computer, router, or WiFi router.

Connect your cable modem to a computer

During installation, connect a computer to an Ethernet port on the cable modem. After you install the cable modem and activate your Internet service, you can disconnect the computer and connect a router to the cable modem.

To connect your cable modem directly to a computer:

1. Turn off and disconnect existing modems and routers.
   If you are replacing a modem that is currently connected in your home, unplug the modem and plug the new cable modem into the same outlet.

2. Connect a coaxial cable.
   Use a coaxial cable to connect the cable port on the cable modem to a cable wall outlet. Make sure that the cable is tightly connected.

   **Note:** If Comcast XFINITY is your cable Internet provider, Comcast XFINITY recommends connecting your cable modem directly to a cable wall outlet.

3. Connect the power adapter to the cable modem and plug the power adapter into an electrical outlet.
   When the startup is complete, the Power LED lights green. If the Power LED does not light, press the **Power On/Off** button.

4. Wait for the cable modem to come online.
The cable modem comes online when the Online LED stops blinking and lights solid green.
This process might take up to 10 minutes.

5. Connect a computer to the cable modem.

Use the Ethernet cable that is provided in the package to connect a computer to the Ethernet port on the cable modem.

6. Activate your Internet service.

For information about how to activate your Internet service, see Before you activate your Internet service on page 11.

**Note:** After you install and activate the cable modem, you can disconnect the computer and connect a router to the cable modem. For more information, see Connect your cable modem to a router after installation and activation on page 14.

Before you activate your Internet service

Before you activate your Internet service, gather the following information:

- Your cable Internet provider account information
- Cable modem model number, which is CM1000v2
- Cable modem serial number, which is on the cable modem label
- Cable modem MAC address, which is on the cable modem label

![Figure 6. Example of a cable modem label](image)

The following is contact information for cable Internet providers that support your cable modem.
Table 2. Cable Internet provider contact information

                        | 1-800-XFINITY (1-800-934-6489)  
                        | For more information, see Activate your Internet service with XFINITY on page 13. |

**Note:** Your cable Internet provider’s contact information might change. You can find the contact information in your monthly Internet service billing statement.

Activate your Internet service (except with XFINITY)

**To activate your Internet service (except with XFINITY):**

1. Visit your cable Internet provider’s website and follow the onscreen instructions to activate your Internet service.

2. If you are unable to activate your Internet service using the instructions on your cable Internet provider’s website, call your cable Internet provider for support.

3. To determine the accurate Internet speed, visit your cable Internet provider’s speed test website and perform a speed test. If your actual speed is lower than your subscribed speed, contact your cable Internet provider.
Activate your Internet service with XFINITY

Set up Internet service by using XFINITY's self-activation process. If you are unable to self-activate your cable modem, call XFINITY customer service. After you complete the setup, perform a speed test.

Before you start the self-activation process, make sure to collect your account number, account phone number, and login information (your email address or user name and password).

**To activate your Internet connection with XFINITY’s self-activation process:**

1. Close all web browsers.
2. Launch a web browser.
   - You are redirected to the XFINITY self-activation page. If you are not redirected to the XFINITY self-activation page, visit [https://register.xfinity.com/](https://register.xfinity.com/).
3. Provide your XFINITY credentials and complete the self-activation process.
   - This process might take up to 15 minutes, during which the cable modem reboots a few times.
4. If you are unable to activate your cable modem using the XFINITY self-activation process, call XFINITY customer service at 1-800-XFINITY (1-800-934-6489) and do the following:
   - When asked, provide your account information and provide the cable modem’s model number and MAC address, which are on the product label on the cable modem.
     - For more information, see Label on page 9.
   - Wait for XFINITY to confirm that your cable modem is active.
     - If the cable modem is not visible, XFINITY can give you instructions to verify why the cable modem does not connect with your high-speed Internet service.
     - If the cable modem is visible to XFINITY, reboot the cable modem. Check your online status again.

**Perform a speed test**

To determine the accurate Internet speed, visit the speed test website of your cable Internet provider and perform a speed test.

If your actual speed is lower than your subscribed speed, contact your cable Internet provider.
Connect your cable modem to a router after installation and activation

After you install the cable modem and activate your Internet service, you can disconnect the computer and connect a router to the cable modem.

To connect your cable modem to a router after installation and activation:
1. Reboot the cable modem by unplugging the power cable from the cable modem and plugging it back in. Wait for the Online LED to stop blinking and light solid green.
2. Use an Ethernet cable to connect the Ethernet port on the cable modem to the WAN or Internet port on the router.
3. Power on the router.
4. Wait until the router is ready.
5. Connect a computer to the router.
   For more information about how to set up your router, see the documentation that came with your router.
Manage Your Network

After you set up the cable modem, you do not need to log in to the cable modem for normal operation. However, you can log in to the cable modem to change a very limited number of settings and monitor the cable modem.

This chapter includes the following sections:

- Log in to the cable modem
- Change the admin password
- View cable modem initialization
- View cable modem status
- View and clear event logs
- Specify the cable connection starting frequency
- Reboot the cable modem
- Reset the cable modem to factory default settings
Log in to the cable modem

To log in to the cable modem:
1. Connect a computer to your cable modem.
   You can connect a computer to your cable modem using the following methods:
   - Connect a computer to your cable modem using an Ethernet connection.
   - Connect a WiFi router to your cable modem using an Ethernet connection, and then connect a computer to your router using a WiFi or Ethernet connection.
2. Launch a web browser.
   A login window opens.
4. Enter the admin user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.

Change the admin password

You can change the default password that is used to log in to the cable modem with the admin user name.

Note: Be sure to change the password for the user name admin to a secure password. The ideal password contains no dictionary words from any language and contains uppercase and lowercase letters, numbers, and symbols. It must be at least 6 and up to 32 characters.

To set the password for the user name admin:
1. Launch a web browser from a computer that is connected to your cable modem.
2. Enter or http://192.168.100.1.
   A login window opens.
3. Enter the admin user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Select **ADVANCED > Administration > Set Password**.
   The Set Password page displays.

5. Type the old password, and type the new password twice.

6. Click the **Apply** button.
   Your settings are saved.

---

**View cable modem initialization**

You can track the initialization procedure of the cable modem and get details about the downstream and upstream cable channel. The time is displayed after the cable modem is initialized.

The cable modem automatically goes through the following steps in the provisioning process:

1. Scans and locks the downstream frequency and then ranges the upstream channels.
2. Obtains a WAN address for the cable modem.
3. Connects to the Internet.

**To view the status of the cable modem initialization:**

1. Launch a web browser from a computer that is connected to your cable modem.
2. Enter **http://192.168.100.1**.
   A login window opens.

3. Enter the admin user name and password.
   The user name is **admin**. The default password is **password**. The user name and password are case-sensitive.
   The BASIC Home page displays.

4. Select **Cable Connection**.
   The Cable Connection page displays.

   The Startup Procedure section displays the initialization progress. The page also displays the status of all downstream and upstream channels. (You must scroll down to view all the channels.) The number of downstream and upstream channels that are locked depends on the number of channels that your Internet provider uses.
View cable modem status

To view cable modem status and usage information:
1. Launch a web browser from a computer that is connected to your cable modem.
2. Enter http://192.168.100.1.
   A login window opens.
3. Enter the admin user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Click the ADVANCED tab.
   The ADVANCED Home page displays information about your cable modem.

View and clear event logs

Event logs capture important cable modem events.

To view and clear the event logs:
1. Launch a web browser from a computer that is connected to your cable modem.
2. Enter http://192.168.100.1.
   A login window opens.
3. Enter the admin user name and password.
   The user name is admin. The default password is password. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Select ADVANCED > Administration > Event Log.
   The Event Log page displays the following information:
   - Time. The time the event was recorded.
   - Priority. The severity for this event.
   - Description. A description of this event.
5. To refresh the page, click the Refresh button.
6. To clear the log entries, click the Clear Log button.
Specify the cable connection starting frequency

The starting frequency is automatically generated. For most Internet connections, you do not need to specify this information. If you must enter a starting frequency, contact your Internet provider.

**To change the starting frequency:**
1. Launch a web browser from a computer that is connected to your cable modem.
3. Enter the admin user name and password.
   The user name is **admin**. The default password is **password**. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Select **Cable Connection**.
   The Cable Connection page displays the status of all downstream and upstream channels.
5. In the **Starting Frequency** field, type a number as instructed by your cable Internet provider.
6. Click the **Apply** button.
   Your settings are saved.

Reboot the cable modem

Rebooting the cable modem disconnects all network connections to the cable modem’s local area network (LAN). After the cable modem is finished booting and reestablishes a connection with the Internet, the devices on your network reconnect to the cable modem’s LAN.

**To reboot the cable modem:**
1. Launch a web browser from a computer that is connected to your cable modem.
3. Enter the admin user name and password.
   The user name is admin. The default password is password. The user name and
   password are case-sensitive.
   The BASIC Home page displays.

4. Click the ADVANCED tab.
   The ADVANCED Home page displays.

5. Click the Reboot button.
   A confirmation message displays.

6. Click the OK button.
   The cable modem reboots.

Reset the cable modem to factory default settings

To reset the cable modem to factory default settings, you can use either the Reset
button on the back panel of the cable modem or the Factory reset software button.
However, if you changed the default password that you use to access the cable modem
and lost the password, you must use the Reset button on the back panel.

After you reset the cable modem to factory default settings, the password is password.
The LAN IP address is always 192.168.100.1. You cannot change this LAN IP address.
Use the reset button on the back panel

**CAUTION:** This process erases all settings that you configured in the cable modem.

**To reset the cable modem to factory default settings using the Reset button:**
1. On the back of the cable modem, locate the **Reset** button.
2. Using a straightened paper clip, press and hold the **Reset** button until the cable modem reboots itself.
   The configuration is reset to factory default settings. This process takes about one minute.

Use the factory reset software button

**CAUTION:** This process erases all settings that you configured in the cable modem.

**To reset the cable modem to factory default settings using the Factory reset software button:**
1. Launch a web browser from a computer that is connected to your cable modem.
2. Enter **http://192.168.100.1**.
   A login window opens.
3. Enter the admin user name and password.
   The user name is **admin**. The default password is **password**. The user name and password are case-sensitive.
   The BASIC Home page displays.
4. Click the **ADVANCED** tab.
   The ADVANCED Home page displays.
5. Click the **Factory reset** button.
   A confirmation message displays.
6. Click the **OK** button.
   The configuration is reset to factory default settings. When the reset is complete, the cable modem reboots. This process takes about one minute.

**WARNING:** To avoid the risk of corrupting the firmware, do not interrupt the reset. For example, do not close the browser, click a link, or load a new page. Do not turn off the cable modem.
This chapter provides information about troubleshooting your cable modem. The chapter includes the following sections:

- Use LEDs to troubleshoot
- Cannot log in to the cable modem
- Troubleshoot the cable internet connection
Use LEDs to troubleshoot

The following table provides help when you are using the LEDs for troubleshooting.

Table 3. Troubleshooting with LEDs

Cannot log in to the cable modem

If you cannot access your cable modem from a computer that is connected to your cable modem or to a router that is connected your cable modem, check the following:

- If your computer is connected to your cable modem with an Ethernet cable, check the connection.
- Make sure that Java, JavaScript, or ActiveX is enabled in your browser. If you are using Internet Explorer, click the **Refresh** button to make sure that the Java applet is loaded.
- Try quitting the browser and launching it again.
- Make sure that you are using the correct login information. Your cable modem user name **admin** is lowercase (Caps Lock is off).
- Make sure that your computer’s IP address is on the same subnet as the cable modem. The IP address of your computer must be in the range of 192.168.100.2 to 192.168.100.254.

If your cable modem does not save changes you made, do the following:

- When entering configuration settings, be sure to click the **Apply** button before moving to another page, or your changes are lost.
- Click the **Refresh** or **Reload** button in the web browser. It is possible that the changes occurred, but the web browser is caching the old configuration.
Troubleshoot the cable internet connection

If your cable modem cannot access the Internet but the Online LED lights green, make sure that the cable MAC address or device MAC address of your cable modem is registered with Internet service provider (see Activate your Internet service (except with XFINITY) on page 12 or Activate your Internet service with XFINITY on page 13).
4 Supplemental Information

This appendix covers the following topics:

- Factory settings
- Technical specifications
Factory settings

The following table shows the factory default settings for the cable modem.
