16-Port Gigabit Ethernet Unmanaged Ultra60 PoE++ Switch, Model GS516UP
24-Port Gigabit Ethernet Unmanaged Ultra60 PoE++ Switch, Model GS524UP

Package contents

• Switch model GS516UP or GS524UP
• Power cord (varies by region)
• Rack-mount kit
• Four rubber feet
• Installation guide and Insight flyer

Note: We recommend that you use a Category 5e (Cat 5e) cable or higher-rated cable for Gigabit Ethernet connections.

This switch is designed for indoor use only. If you want to connect to a device located outdoors, the outdoor device must be properly grounded and surge protected, and you must install an Ethernet surge protector inline between the switch and the outdoor device. Failure to do so can damage the switch.

WARNING: Before connecting this switch to outdoor cables or devices, see https://kb.netgear.com/000057103 for safety and warranty information.

Installation Guide

1. Register with the NETGEAR Insight app

1. Search for NETGEAR Insight and download the latest app.
2. Set up a NETGEAR account if you do not have one.
3. Tap the menu in the upper-left corner.
4. Tap REGISTER ANY NETGEAR DEVICE.
5. Enter the serial number located on the bottom of the switch, or use the camera on your mobile device to scan the serial number bar code.
6. Tap GO.
The switch is registered and added to your account. You can now view the switch in the NETGEAR Insight app.

Note: Because this is an unmanaged switch, you cannot configure or manage it in NETGEAR Insight.

2. Connect the switch

Sample connections

PoE++ switch

Model GS516UP provides PoE++ (802.3bt) power on ports 1-8 with up to 60W to each port and PoE+ (802.3at) power on ports 9-16 with up to 30W to each port. The total PoE power budget for the switch is 380W across all active PoE ports.

Model GS524UP provides PoE++ (802.3bt) power on ports 1-16 with up to 60W to each port and PoE+ (802.3at) power on ports 17-24 with up to 30W to each port. The total PoE power budget for the switch is 480W across all active PoE ports.

PoE+++ switch

Model GS516UP provides PoE++ (802.3bt) power on ports 1-8 with up to 60W to each port and PoE+ (802.3at) power on ports 9-16 with up to 30W to each port. The total PoE power budget for the switch is 380W across all active PoE ports.

Model GS524UP provides PoE++ (802.3bt) power on ports 1-16 with up to 60W to each port and PoE+ (802.3at) power on ports 17-24 with up to 30W to each port. The total PoE power budget for the switch is 480W across all active PoE ports.

PoE++ mode

The DIP switches on the front panel let you select the following PoE++ modes:

• 802.3bt mode. The mode for devices that are fully compliant with IEEE 802.3bt (PoE++). This is the default mode for all PoE++ ports.
• pre-802.3bt mode. The mode for devices that can receive power higher than 30W but that are not fully compliant with IEEE 802.3bt (PoE++).

3. Check the LEDs

When you connect the power cord to the switch and plug it into an electrical outlet, the LEDs indicate the status.

<table>
<thead>
<tr>
<th>LED Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power</td>
</tr>
<tr>
<td>Solid green. The switch is powered on and operating normally.</td>
</tr>
<tr>
<td>Off. Power is not supplied to the switch.</td>
</tr>
<tr>
<td>Fan</td>
</tr>
<tr>
<td>Off. Fan is not working correctly.</td>
</tr>
<tr>
<td>Solid yellow. Fan is working correctly.</td>
</tr>
<tr>
<td>PoE Max</td>
</tr>
<tr>
<td>Solid yellow. Less than 7W of PoE power is available.</td>
</tr>
<tr>
<td>Blinking yellow. At least once during the previous two minutes, less than 3W of PoE power was available.</td>
</tr>
<tr>
<td>PoE+ LED</td>
</tr>
<tr>
<td>Solid green. 1000 Mbps link on this port.</td>
</tr>
<tr>
<td>Blinking green. 1000 Mbps activity on this port.</td>

PoE considerations

The PoE power that the switch supplies to powered devices (PDs) is prioritized in ascending port order. If the power requirements for the attached PDs exceed the total power budget of the switch, the PD on the higher-numbered port is disabled to make sure that the PDs connected to the higher-priority, lower-numbered ports are supported first.

A PD listed as an 802.3bt PoE++ powered device does not necessarily require the maximum power limit of the specification. Many PDs require less power, potentially allowing all PoE++ and PoE+ ports to be active simultaneously. The following table shows the standard power ranges calculated with the maximum power limit of the specification. Many PDs require less power, possibly allowing all PoE++ and PoE+ ports to be active simultaneously.

The PoE power that the switch supplies to powered devices (PDs) is prioritized in ascending port order. If the power requirements for the attached PDs exceed the total power budget of the switch, the PD on the highest-numbered port is disabled to make sure that the PDs connected to the higher-priority, lower-numbered ports are supported first.

A PoE-related short circuit occurred on the port.

The PoE power that the switch supplies to powered devices (PDs) is prioritized in ascending port order. If the power requirements for the attached PDs exceed the maximum level that the switch permits. The maximum level is 15.4W for a PoE connection, 30W for a PoE+ connection, and 60W for a PoE++ connection.

The PoE current on the port exceeded the classification limit of the PD.

The PoE voltage of the port is outside the range that the switch permits.

Mount the switch in a rack

We recommend that you use the brackets and screws that came with the switch.

1. Attach the supplied mounting brackets to the side of the switch.
2. Insert the supplied small screws through each bracket and into the bracket mounting holes in the switch.
3. Tighten the screws with a No. 1 Phillips screwdriver to secure each bracket.
4. Align the mounting holes in the brackets with the holes in the rack, and insert the provided pan-head screws (you can choose among two types of pan-head screws) with nylon washers through each bracket and into the rack.
5. Tighten the screws with a No. 2 Phillips screwdriver to secure mounting brackets to the rack.

PoE troubleshooting

Here are some tips for correcting PoE problems that might occur:

- If the PoE Max LED is solid yellow, disconnect one or more PDs to prevent PoE oversubscription.
- For each powered device (PD) that is connected to the switch, the associated LED on the switch lights solid green. If the PoE LED lights solid yellow, a PoE fault occurred and PoE halted because of one of the conditions listed in the following table.

<table>
<thead>
<tr>
<th>PoE Fault Condition</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A PoE-related short circuit occurred on the port.</td>
<td>The problem is most likely with the attached PD. Check the condition of the PD, or reset the PD by disconnecting and reconnecting the PD.</td>
</tr>
</tbody>
</table>

Specifications

- **Device Class**: 0 PoE, PoE+, and PoE++
  - Maximum Power Supplied by the Switch: 0.44W
  - Power Delivered to the PD: 0.44W-12.95W
- **Device Class**: PoE, PoE+ and PoE++
  - Maximum Power Supplied by the Switch: 4.0W
  - Power Delivered to the PD: 4.0W-3.84W
- **Device Class**: PoE, PoE+, and PoE++
  - Maximum Power Supplied by the Switch: 7.0W
  - Power Delivered to the PD: 3.84W-6.49W
- **Device Class**: PoE, PoE+, and PoE++
  - Maximum Power Supplied by the Switch: 15.4W
  - Power Delivered to the PD: 6.49W-12.95W
- **Device Class**: PoE+ and PoE++
  - Maximum Power Supplied by the Switch: 30.0W
  - Power Delivered to the PD: 12.95W-25.5W
- **Device Class**: PoE+ only
  - Ultra power: 45.0W
  - Power Delivered to the PD: 25.5W-11W

If a device receives insufficient PoE power from the switch, consider using a shorter cable.
