1. Register the switch

1. From a computer or mobile device that is connected to the Internet, visit my.netgear.com.

2. Log in to your NETGEAR account.

   NOTE: If you don’t have a free NETGEAR account, you can create one.

   The Your Registered Products page displays.

3. Click the REGISTER NEW PRODUCT button.

4. In the SERIAL NUMBER field, type the serial number of your switch.

   The serial number is 13 digits long. It is printed on the switch label.

5. From the PURCHASE DATE menu, select the date that you purchased the switch.

6. Click the REGISTER button.

   Your switch is registered to your NETGEAR account.

   A confirmation email is sent to your NETGEAR account email address.

2. Connect the switch

   NOTE: Each connected device requires a power adapter because the MS305 switch does not provide PoE power.

   NOTE: All switch ports support 2.5 Gbps, 1 Gbps, and 100 Mbps. You can connect any device to any switch port. We recommend that you use Category 5e (Cat 5e) cables or higher-rated cables for your connections.

   This switch is designed for indoor use only. If you want to connect it to a device outdoors, the outdoor device must be properly grounded and surge protected, and you must install an Ethernet surge protector inline between the switch and the outdoor device. Failure to do so can damage the switch.

   WARNING: Before connecting this switch to outdoor cables or devices, see https://kb.netgear.com/000057103 for safety and warranty information.

   3. Check the LEDs

   When you connect the power adapter to the switch and plug the cable into an electrical outlet, the LEDs indicate the status:

   **LED** **Description**
   
   Power LED
   
   Solid green: The switch is powered on and operating normally.
   
   Off: Power is not supplied to the switch.
   
   Both Port LEDs
   
   Solid green: 2.5 Gbps link on this port.
   
   Blinking green: 2.5 Gbps activity on this port.
   
   Off: No link is detected on this port.

   Left Port LED only
   
   Solid green: 1 Gbps link on this port.
   
   Blinking green: 1 Gbps activity on this port.
   
   Off: No link is detected on this port.

   Right Port LED only
   
   Solid green: 100 Mbps link on this port.
   
   Blinking green: 100 Mbps activity on this port.
   
   Off: No link is detected on this port.

   3. Check the LEDs

   When you connect the power adapter to the switch and plug the cable into an electrical outlet, the LEDs indicate the status:

   **LED** **Description**
   
   Power LED
   
   Solid green: The switch is powered on and operating normally.
   
   Off: Power is not supplied to the switch.
   
   Both Port LEDs
   
   Solid green: 2.5 Gbps link on this port.
   
   Blinking green: 2.5 Gbps activity on this port.
   
   Off: No link is detected on this port.

   Left Port LED only
   
   Solid green: 1 Gbps link on this port.
   
   Blinking green: 1 Gbps activity on this port.
   
   Off: No link is detected on this port.

   Right Port LED only
   
   Solid green: 100 Mbps link on this port.
   
   Blinking green: 100 Mbps activity on this port.
   
   Off: No link is detected on this port.

Mount the switch on a wall

We recommend that you use the wall mount screws that are included. The screws are 0.25 in. (6.5 mm) in diameter, 0.63 in. (16 mm) in length.

1. Locate the two mounting holes on the bottom panel of the switch.
2. Mark and drill two mounting holes in the wall where you want to mount the switch. The two mounting holes must be 2.95 in. (75 mm) apart, center-to-center.
3. Insert the supplied anchors into the wall and tighten the screws with a No. 2 Phillips screwdriver. Leave about 0.15 in. (4 mm) of each screw protruding from the wall so that you can insert the screws into the holes on the bottom panel.
