

Welcome to your new Orbi Wi-Fi 6 router

What's in the box?

1x NETGEAR Orbi Wi-Fi 6 router

1x Power adapter

1x Ethernet cable

- 1 Download the Orbi app

- 2 Connect your Orbi router

1. Connect the Ethernet cable to your Orbi's Internet port, then connect the other end to the port labelled **LAN1** or **GE1** on your Optical Network Terminal – that's the fibre box usually found on your wall.
2. Connect the power adapter and turn your Orbi on at the wall.

Got extra Orbi satellites? Find a place to plug them in now, or you can set them up later. Orbi satellites must be within range of your Orbi router's Wi-Fi signal, so don't place them too far apart from each other.

If you have a landline, connect it to the port labelled **POTS** or **TEL** on your Optical Network Terminal.

3

Connect to your Orbi Wi-Fi network

1. Go to the Wi-Fi settings on your mobile device.
2. Connect to your Orbi Wi-Fi network. You'll find the Wi-Fi network name and password printed on the front of your Orbi router.

It may take a few minutes for your network to appear after plugging in your Orbi.

4

Open the Orbi app and follow the setup instructions

Important: Skip the steps instructing you to disconnect and reconnect your ISP modem. These steps don't apply – just select 'Continue'.

That's it, your Orbi router is up and running!
