This results in an efficient use of air-time, reduced latency, and increased bandwidth to add more devices to your network.

The Nighthawk WiFi 6 Mesh System is powered by a 1.5GHz quad-core processor, is built for performance at an ultimate level. The ultra-fast processor enables the router to seamlessly handle data intensive applications such as 4K UHD video streaming, VR/AR gaming, as well as provide a stronger, more reliable WiFi experience. This powerful processor is optimized for AX making intelligent spontaneous decisions to schedule data traffic to maximize WiFi Bandwidth utilization.
